WARREN SLOAN, - R. 4, ELORADO, ILL.

For Farmers

—AND—

Homeseekers

The January number of The Southern Field contains an article of great interest to Farmers and Stock Raisers, on the relative place of Southern Agriculture to that of the United States and showing the relative profits of farm products in the South as compared with returns in other sections. This article is of unusual interest, showing from government and other sources a condition of affairs as respects nearly all farm crops and all lines of agriculture not generally understood. Copies free upon request to

H. V. RICHARDS,

Black Langshans

I won the \$25 Challenge Trophy Cup for highest scoring cock, cockerel, hen and pullet at the great Chicago Heights Show, 1905. Also silver cup for highest scoring pen in Asiatic class. Also won at the Chicago Show, 1904. Stock and eggs for sale. Send for circular and price list.

R. A. HEWES,

Box 1, Crete, Illinois.

SAVE MONEY

...ON YOUR SUBSCRIPTIONS...

Instead of paying full price, take up one of our offers. You can take more papers in this way. All papers are for a year. Send at once.

Papers can be sent to different Addresses if desired.

Every fancier needs more than one poultry paper in the successful conduct of his business, thereby securing the wide range of valuable information on all phases of successful poultry raising. There are over 70 poultry papers in the United States. AMERICAN POULTRY JOURNAL, which enjoys the prominence of being the pioneer paper of not only the United States, but the world, has been enabled to make special clubbing prices with some of these journals and we give our subscribers the benefit of same.

We have also made a careful selection of all the best poultry books published. In the list below we have combined AMERICAN POULTRY JOURNAL with only one of these publications or books with special price for same. Should any one desire to take more than one poultry paper or book in connection with AMERICAN POULTRY JOURNAL, they can find out the clubbing price by adding the regular price of all the books and journals they wish to take together and deducting 25 per cent. For instance, should you wish AMERICAN POULTRY JOURNAL at 50 cents, one other journal at 50 cents and one book at 50 cents, the clubbing price would be \$1.12. These clubbing offers are for old subscribers as well as new.

All orders received at this office will have prompt attention and we in turn will send the orders to different papers, thus saving you the annoyance of writing a number of letters and also saving you money through the reduced rate we can make you by sending in your order for all the poultry papers or books you wish to us.

Orders will be taken for the new Standard of Perfection, published by the American Poultry Association, and which will be ready for delivery March, 1905. This is a book of nearly 300 pages and will contain over eighty black and white illustrations of ideal specimens of male and female of every Standard variety.

1.50 and What it Will Do**ORDER NOW**

The New Standard of Perfection, which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of**American Poultry Journal**

Help you get the New Standard cheaper

1.—Send us One New Subscription to the American Poultry Journal at its regular price of 50 cents a year and we will let you have **The New Standard for \$1** instead of \$1.50.

2.—OR—Send us Two New Subscriptions at 50 cents each, and you can have **The Standard for 85 cents** instead of \$1.50.

3.—OR—Send us Three New Subscriptions at 50 cents each, and you can have **The Standard for 75 cents** instead of \$1.50.

4.—OR—Send us Four New Subscriptions at 50 cents each, and you can have **The Standard for 50 cents** instead of \$1.50.

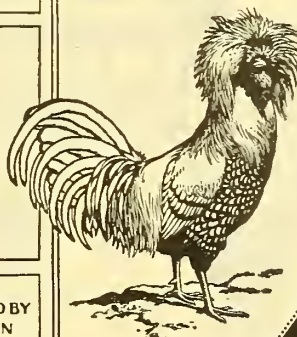

5.—OR—Send us Five New Subscriptions at 50 cents each, and you can have **The Standard for 25 cents** instead of \$1.50. 6.—OR—Send us Six New Subscriptions at 50 cents each, and **WE WILL GIVE YOU THE STANDARD FREE.** Address

Silver Penciled Wyandottes. All surplus stock must be closed out at a sacrifice before March 15. Trios \$5 up. Eggs from pens A, B and C \$3 per 15, \$5 per 30. Eggs from pens D, E and F \$1.50 per 15, \$3 per 30. **Columbian** pen headed by 3d World's Fair and 1st Detroit cockerel mated to 1st Detroit pullet and 1st Detroit hen, and other high scoring females. 1 trio \$15. Eggs \$3 per 15 straight. Circulars.

H. H. & E. M. COBURN,

Memphis, Mich.

THE HEAVY LAYING KIND of S. C. Black Minorcas, S. C. White Leghorns and Barred Plymouth Rocks that can win. Young stock at prices that are tempting to the egg farmer or the fancier—quality that will please all. No other concern ever offered our quality at our prices. To introduce our stock we offer special prices on eggs for hatching season, 1905, viz.: 13 for \$1.50 for \$3, 100 for \$5. We guarantee every egg to be from our best, carefully selected exhibition matings of line-bred, standard stock. Have your egg orders booked now: \$1 down, balance when shipped. Don't miss our bargain sale on cockerels; they will do you good.

Otter Creek Poultry Farm Co., Watertown, N. Y.

Vass' Buff Orpingtons

are still winning at large shows. At World's Fair won 1st and 3d hens, 4th cockerel and 7th pullet. At Madison Square Garden, N. Y., 1905, in class of 39 cockerels won 2d ckl., defeating the originator and 1st prize ckl. at first International Alexander Palace Show, London, and was purchased and sent to America at cost of \$750. Have grand lot of breeding stock to offer in Single and Rose Comb Buffs; four trios of White Orpingtons; three cks. Black Orpingtons and Partridge Wyandottes. Eggs for hatching at all times. Write for prices. Circular free.

THE KEYES-DAVIS CO., Ltd., Dept. B, Battle Creek, Mich.

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

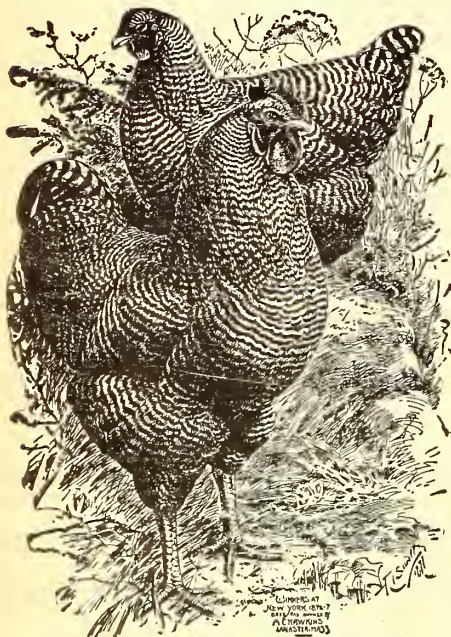

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" cleans sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes, 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

in any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

EGGS FROM PRIZE MATINGS.	
1 Sitting, \$5.	3 Sitings, \$10.
2 Sitings, \$8.	5 Sitings, \$15.
Per 100, \$20.00.	

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned. * * * * *

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes on 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at Boston, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at Honest Prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

ACKLEY AND PAGE AT ST. LOUIS SHOW

On eight entries won 1st cock, 2d cock, 3d hen, 6th cockerel, 6th pen. An unequalled winning and a remarkable victory over all competitors.

We repeated this victory at Chicago, December, 1904

by winning the "rare five firsts," four seconds, three thirds, three fourths, one fifth; \$25 cup for best display; and other specials.

We were able to do the trick again at Chicago, Jan., 1905

by winning cock, 1st, 5th; cockerel, 3d, 4th; hen, 1st; pullet, 1st; pen, 1st; American Buff Wyandotte Club Cup for best display; special best colored female; almost a clean sweep and in the hottest competition. These three shows have demonstrated beyond any doubt that the

Ackley & Page Strain of Buff Wyandottes is Best

We still have stock for sale. Breeding pens mated for best results for sale cheap. Let us start you right. Catalogue free. Twenty odd pens mated for egg trade. Write us to-day.

ACKLEY & PAGE

Cleveland, O.

We Can Teach You How to RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

SHOW RECORD MAKERS**EGG RECORD BREAKERS****Smith's S. C. White Leghorns**

Bred-to-win birds that are prize takers. Winners at St. Louis World's Fair, Madison Square Garden, N. Y., Rochester, Syracuse, Elmira, Auburn. First pullet at recent N. Y. show; also winners at N. Y. in 1903-4-5. Eggs from prize matings \$3 per 15; \$5 per 30. Eggs from choice laying stock—none better—\$1.50 per 15; \$2.50 per 30; \$4.50 per 60; \$6 per 100; \$50 per 1000. Choice cockerels for breeding \$2, \$3 and \$5. I also manufacture "Verminal," a perfect vermicide, guaranteed sure death to lice and mites. Write for circular.

S. E. SMITH, Box 101, NORWICH, NEW YORK

**Let's Sit Down and Talk It Over**

If I could sit down with you, take one of our machines apart and show it to you piece by piece, I would have no trouble selling you a

New Idea Incubator

No machine on the market more deserves your confidence. THEN when I told you that you could get it for less than one-half the cost of other machines, and showed you just how this saving is made, I would be sure of your order.

This is the spirit in which we have written Our New Book, "How to Make and Save Money with Incubators and Brooders." It's a face-to-face talk on the subject because we cannot in any other way meet and talk to the thousands who want to know the New Idea. Build your own Incubator; that's the secret of saving half, and you can do it just as successfully as thousands of other men, boys and women have done since we first began telling how it could be done.

The Book Tells about the Plans for Building Incubators and Brooders. You can't possibly go astray. We sell you the parts you cannot make, like Tank, Heater, Lamp, Regulator, etc., and we guarantee that no factory-made machines have better fixtures than yours. You need a Brooder too. Our method enables you to get an Incubator and Brooder at less cost than a factory-made incubator alone. Other features: "Why Factory-made Incubators are Expensive," "How to Get Your Incubator Free," "Give the Boy a Chance," "Full Instructions for Running Incubators and Brooders," etc. It's full of facts helpful to the experienced and invaluable to the beginner. GET THE BOOK—It's FREE. A postal will bring it. Address

STANDARD POULTRY ACCOUNT BOOK

Henry L. Brechman

Chicago, Ill.

Price 50 Cents

STANDARD POULTRY ACCOUNT BOOK

IS DEDICATED TO BUSY POULTRYMEN THROUGHOUT THE COUNTRY and is designed especially to make easy and enjoyable the correct keeping of accounts by the day, month and year of all expenses and income pertaining to the Poultry business.

The STANDARD POULTRY ACCOUNT BOOK is the best and most practical account book ever devised for the poultry man. This book has been arranged with a view of obtaining thorough satisfaction with the least possible labor. It is just exactly what poultrymen want.

The system is so simple a child might have entire charge of the book and keep the accounts correctly, and yet, it is so complete as to enable the user to know just what money has been expended and for what purpose; the monies received and from what source, and cash balance on hand and in bank.

It analyzes your expenditures and receipts in a way as complete and thorough as would be required by a large business house. Requires no more time than any ordinary cash account.

The book is arranged to contain the complete records of expenditures and receipts for 12 months (beginning with any month) with Recapitulation, Inventory and Balance Sheets to close up the year's business.

Contains 32 pages, 7 1/4 x 10 inches, neatly printed in blank form on best quality linen ledger paper, regular blank book ruling, and is bound in a neat, durable binding.

Send for a copy of this valuable book and begin to keep your accounts in a systematic, orderly manner—the correct way. Whether you keep poultry for pleasure or for profit this book will help you to conduct your business on a more intelligent basis. You'll be pleased with it. Price 50 cents, postage prepaid.

The above book and AMERICAN POULTRY JOURNAL one year, both for 75 cents.

GOOD WHITE WYANDOTES

I have carefully selected four pens of my very best WHITE WYANDOTTE hens and pullets, of good size, shape and excellent laying qualities, mated with fine cockerels of grand shape, pure white plumage, superb carriage, and fine Wyandotte points. These birds are young, vigorous stock and will produce first-class chicks. I will sell eggs from these choice matings at \$1.00 per sitting of 15. Satisfaction guaranteed.

Hawkeye Incubator Co., Box 2 Newton, Iowa.

One Thing Sure

If you don't hatch a big per cent of the eggs you lose out in the poultry business. Same result if the chicks don't come the natural way, vigorous and strong. Your first concern should be to get an incubator that will hatch the most and best, and a brooder that neither smothers, chills nor kills with fumes. Many machines are offered. You must choose. If wise, you'll avoid risks and get the machines that years of trial and universal testimony prove to be always dependable,

Successful Incubators and Brooders.

They are self-contained. They need little of your care. They operate as well for one man as for another. Your success does not depend upon your skill, but on the automatic working machine. They establish perfect hatching and brooding conditions under all circumstances. You can depend upon them for results.

System in Poultry Practice

BY **JAMES SHACKLETON**

30 Chapters, 147 Pages, One Dollar, Postpaid.

In 17 days just elapsed I have received orders for 87 copies of this book from California; chiefly because many Californians bought the book a year ago, have tested it in their own experience, and told others of its value. Not the least bit like any other poultry book, but many people say it is better for that. New circular that convinces, for a stamp. A chapter of book postpaid for ten cents. The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

The Racine

Incubator

is the simple, sure, dependable kind. Used by thousands of successful poultry men and women.

Automatic heat regulator; 14 oz. copper tank and boiler; white pine case, double walled; self-ventilated; nursery; no moisture. Built by a man who devoted 23 years to the problem—who knows most about incubators. It can be operated by anyone, anywhere. There lies the great value of the Racine.

If you seek an incubator or brooder and wish to know about all kinds, please send for our remarkable **Book About Incubators**—written by the man who made the Racine. It is a complete education on incubators. It tells facts that you need to know before buying—facts you would not think of. It tells, too, how to make poultry pay—23 years experience. Don't buy without reading it. The book is free. Write today for it. Address

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 17 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

Prof. Henry says that success is only obtained by concentrating all efforts upon one line.

A two-years' course in Hog Raising: Teaching how to be successful.

How to secure the greatest profits.

How to get 17 lbs. of pork out of a bushel of corn and 19 lbs. from a bushel of wheat-fed hogs.

How to feed to double the growth and gain over usual methods; only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the subscription to this paper, the costly experience and gathered wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says "Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the **American Swineherd** and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition the wonderfully suggestive picture in colors, "Uninvited Guests," suitable for framing, showing the pigs partaking of a meal uninvited.

This equips you for a successful hog business.

AMERICAN SWINEHERD

The Victor Book Tells

How to Make Money in the poultry business. How to have laying hens when eggs are dear. How to get broilers on the market while prices are up. How to raise the heaviest fowls. Hundreds of hints and helps that will make it valuable in any poultryman's library. A well-known authority says the article on the development of the chick in the shell is the finest treatise on the subject ever written. The practical experiments our experts describe show the lines on which the most successful work can be done.

Our machines are not experiments. They are the product of science, long experience and 37 years' continuous operation of the same plant. Victor incubators will not warp, twist or crack from the effect of green lumber. That we are now using has been in our yards over two years. You get full fourteen ounce copper in the tanks and boilers. We build for service and our machines are in use year after year.

The Story of Victor Incubators from the rough lumber to the finished machine: all the points in design, construction and operation which make it the perfected machine. It gives you the reasons why it is best for you to buy a Victor. We tell you just what you would learn if you came to our factory and saw us build the machine—just what you would be told by those who are using our machines. We have not made a single statement in the book which is not backed up by the actual facts. We would not dare to do otherwise, because with every machine we sell goes our bond to take it back and refund the money if it is not in every way up to our description.

When you get a Victor you get Incubator Satisfaction. Anybody in Quincy or who has ever bought from us will tell you you are safe in dealing with us. Victor Incubators and Brooders were used exclusively by the Model Poultry Farm at the St. Louis World's Fair and we have a little leaflet about their experience which we will send you with the Victor Book.

Why Should a Farmer Buy ADVANCE FENCE In Preference to Any Other? Here Are the Reasons:

The Price is the Lowest. It is made so by our economical method of Marketing. The Dealer's profit on fencing is worth saving. We make the fence and sell at Manufacturers' price to the farmer direct. This saves to the farmer the profit usually made by the Jobber and the Retail dealer. Two profits saved make the price of Advance Fence the lowest known for high grade fence. Give us a chance to quote you a net delivered price on the quantity of fence you need before purchasing. That's all we ask.

We Prepay Freight on 40 rods or more. Most others quote F. O. B. Factory prices. Then you have the freight to pay, and wire fence is heavy stuff. Our prices include the freight to your station, a "laid down" price is what you want.

We Allow 30 Days Free Trial. You take the fence and set it up. Use it. Climb over it. Let the stock at it. Give it any trial to test its strength. Do this thirty days. Then if it is not up to your expectations in any particular send it back and your money will be refunded. We pay the freight back, too. Is this not the fairest and most liberal offer on fence you ever saw?

The Quality of Advance Fence is Highest. We use only the best quality of galvanized steel wire. The fence is woven under careful supervision on the most improved fence machinery in existence. The top and bottom selvage of Advance fence are double strength. The stay wire is continuous, being twisted with the selvage from one stay to the next, and wrapped twice around each line wire as it passes across the fence. This unique method of weaving gives us a continuous or endless stay wire. We obtain twice as much strength from the wire used as fences with cut stay wires. The slight crimp at the intersection of the stay with the strand wire prevents the stay from slipping, and also provides amply for expansion and contraction.

Twenty Six Styles to Choose From. Where the dealer offers you a very limited selection to choose from we give you 26 Styles and sizes of fence for all purposes, besides 24 styles and sizes of steel frame Gates. This enables you to make a wise selection as well as a satisfactory one, and prevents your having to buy a 12 strand fence for a 10 strand job, and paying for useless wire, just because the dealer hasn't the size you want on hand.

Why Poultrymen Like Advance Garden Fencing

Our 18 strand garden fencing is in high favor with Poultrymen because it is not only woven closely enough to turn poultry, but it is strong enough to turn all common farm stock. It lasts many times as long as ordinary poultry netting. It is just the thing for gardens, orchards, lawns and barn lots.

Our Free Fence Book is better than any Store you can visit to get just the fence you want. It is a Silent salesman, and one who tries to save you money instead of trying to sell you what you don't need. Get this book, look it over by your fire-side at your leisure. Decide on which fields you will fence this season, and which size fence will fill the bill. With the book will come to you Laid Down Prices—including cost of fence and all freight charges to your station.

Write for the Free Fence Book and wholesale delivered prices, today.

J. H. DOANE,

Box D, Gouverneur, N. Y.

From Eggs to Eagles

This is easy when you know how, and you don't know how until you operate a

Self-regulating BUCKEYE Incubator

Why? Because, with others you have too much invested in machinery. \$4.50 to \$6.50 should buy a 50-Egg size, \$8.50 to \$12.00 a 100-Egg size, and \$13.75 to \$20.00 a 200-Egg size. The above are our prices for Incubators. As substantially and durably built, and of as good material as any Incubators on earth. They are self-regulating, automatic moisture and ventilation, hot water style, and all are sold on

30 DAYS' TRIAL

Or write these, who among others hatch every egg put in our incubators: Mrs. Erie Brack, Havensville, Kan., Mrs. W. T. Graham, R. R. No. 1, New Hartford, Ia., G. F. Mankin, L. Box 54, Luther, Mich., Bert S. Robinson, R. 3, Urbana, O., Paul Clyde, Hooper Station, O., Geo. Luce, Edington Lane, Wheeling, W. Va., M. C. Matthews, Upola, Kan., Paul Wolf, Menno, Wis., M. E. Welisch, Cary Station, Ills.

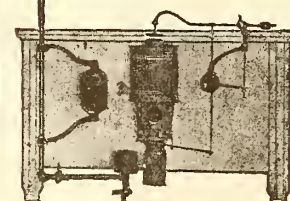

They hatch every good egg. We have 50,000 in use, and thousands hatch every egg put in them, and the chicks are stronger, and will more surely live, than those hatched in any other Incubator or in any other way. If you are loosing chicks soon after hatching, send for FREE catalog, and learn how to save them, you can lose nothing by trying it; yet for further proof of its efficiency and value write any of our patrons of whom catalog gives hundreds; not forgetting stamp for reply.

Brooders must not be carelessly selected if you would make money raising poultry. Not the largest size for the least money is the cheapest, but the one that raises the most chicks—Ours are central heat. Loss from crowding impossible. Prices, \$3.00 up—think of a 50-capacity Incubator and Brooder complete and on 30 Days' Trial for \$7.50

BUCKEYE INCUBATOR CO., Box 2, Springfield, O.

Will Your Incubator Do This?

Will your incubator hatch a setting of eggs with one-half the oil you now use? Will your wick burn 21 days without trimming? Will your regulator control the flame, raise or lower it as required? Will your burner burn without charring wick, overheating, causing liability to fire? Will your machine save half the time, half the labor, half the cost of operation? Put on this outfit and it will do even more. It will make your old machine do better than it ever could do, besides save you many dollars and much annoyance. Its combined damper and flame regulation alone **saves half the oil.** Its burner saves danger from fire—**can't overheat.** Its wick saves trimming—**never needs it.** Its regulator controls both flame and damper (see cut); this avoids too high or too low a flame.

saves seventy-five per cent. of gas.

ACME AUTOMATIC LAMP AND COMPOUND REGULATOR

make hatching or rearing both pleasurable and profitable. Sold separately or together. Fit any machine; any one can attach them. Send for catalog giving detailed description and our full line of fixtures, including illustrated plans for building the famous Peerless Incubators and Brooders. Nearly 100 photographic views showing step by step every stage of incubator construction. It's free. Our new gas regulating burner for incubators.

TEN REASONS WHY YOU SHOULD USE PAGE POULTRY FENCE

PAGE POULTRY

- 1—Made of larger wire—smallest No. 14.
- 2—Stronger wire—all horizontals Page-Wire.
- 3—Heavily Galvanized to prevent rusting.
- 4—Expansion and contraction provided for—horizontal bars being coiled.
- 5—Easily adjustable to hilly surfaces—the coil does it.
- 6—Requires no boards at top or bottom.
- 7—Stands up stiff—does not sag, bag or buckle.
- 8—Fewer posts needed—one every 50 feet—because larger, stiffer horizontals.
- 9—Fences poultry in, stock out—a good partition fence between stock and poultry.
- 10—Costs less erected than common netting—looks better and lasts much longer.

PAGE WOVEN WIRE FENCE CO.
Box 5849, Adrian, Mich.

MORGAN'S PORTABLE LAYING HOUSE

Hens lay best when they have a clean, dry, well ventilated house with nests sheltered from light and the flock. Our special laying house is all this and more too. A stamp, with request, will bring our catalogue with styles, sizes, prices and special inducements for the season of 1905.

SANITARY HOUSE CO., Box 1, Lemont, Ill.

AT GREAT ST. LOUIS WORLD'S FAIR OUR

...Partridge Wyandottes...

Won 1st cock, 1st pen, 2d pullet in competition with the best in the world. Our SILVER PENCILED WYANDOTTES are just as good and we have hundreds of the finest exhibition and breeding stock of both varieties for sale.

S. C. BUFF ORPINGTONS

Fifty Buff Orpington cockerels for sale, bred from the best stock in America, and of correct type and color. We shall have 20 grand breeding pens for this season, composed of the best of last season's breeders and their progeny. Satisfaction guaranteed every customer. Eggs \$3.00 per thirteen, \$5.00 per twenty-six.

FRANK W. GAYLOR, Mgr.

Box F, White Plains, N. Y.

You Get \$300 For \$5

Four World's Fair Winners, Bred and Owned by U. R. Fishel.

That is what the customer got who wrote the following letter: "Streator, Ill., Jan. 17, 1905. I would not take \$300 for the twelve chicks I reared from the setting of eggs I bought of you last spring. * * *". Why ponder over the matter where to place your order for eggs for hatching. My matings this season are so far ahead of any previous season, that really I feel as if every egg should produce a winner.

When You Buy Eggs For Hatching

why not get the best? No haphazard matings in my yards, I have for years bred my winners and win with my breeders. My last winnings at the GREAT ST. LOUIS WORLD'S FAIR, where the Fishel White Rocks won seventeen prizes, surely convinces you of the quality. They tried hard to wrestle the title of "The Best in the World"

From The Fishel White Rocks

but it was too large an undertaking and one of the impossibilities. Have you seen a copy of my NEW 48-PAGE CATALOGUE? It is the finest poultry catalogue ever issued. Send three two cent stamps for a copy. I have something over TWO THOUSAND SELECT BREEDERS TO SELL, the cream of six thousand. It will pay you to get my prices.

E G G S \$5.00 per 15
 15.00 per 50
 25.00 per 100

U. R. FISHEL

Box A, Hope, Ind.

White Wyandottes

Duston's breeding and exhibition birds of high quality, farm raised and bred in line from my prize winners. While they did not get any ribbon at the great World's Fair, they were among the best of hundreds that went home without prizes. If you want good birds to start you right at reasonable prices, I can supply you in young and old in lots to suit.

G. H. SUNDERMAN,

Beardstown, Ill.

H. O. SEARS, Breeder of Fancy Poultry

MAKES
CHICKS
HEALTHY

The Old Trusty Incubator

Patented Oct. 20, 1903 and Feb. 6, 1904.

Made by
Johnson,
"the Incuba-
tor Man,"
the man all
poultry raisers
know. You trust
the man, you can
trust his machine.

Johnson thinks more of his Old Trusty Incubator than he does of his face. But he is not willing to be separated from the result of his life's work. It's his contribution to poultry raising—all the monument he wants.

Old Trusty came into the front rank last year, its first year. This year it is doubling in sales. It is because it was made right to begin with. Nobody was able to suggest any improvement. Johnson did not have to go at it blind when he perfected Old Trusty. He got his experience building other machines—lots of it. He made a good many thousands of them. When he let go his old machines and started in on Old Trusty all he had to do was to draw on his many years experience as a poultry raiser and as an incubator manufacturer. The work they are doing is what is selling them so fast.

HOW JOHNSON'S PEOPLE TALK.

The M. M. Johnson Co.

Emporia, Kan., February 25, 1905.

Gentlemen:—We sold a 100 egg OLD TRUSTY to Evan R. Griffith who came in yesterday and reported that out of 90 eggs he had hatched 82 chicks.

Yours truly, HAYNES BROS. (Wholesale Hardware)

M. M. Johnson.

Vicksburg, Miss., Feb. 18, 1905.

Dear Sir:—From 75 eggs we hatched 72 chicks. Have 71 yet and all doing nicely. I am, Respectfully, F. C. DOYLE, 816 Washington St.

Mr. M. M. Johnson,

Colorado Springs, Colo., Feb. 21, 1905.

Dear Sir:—I set Old Trusty Jan. 31st. From 80 fertile eggs hatched 76 good, strong chicks. The weather ranged as low as 23 below zero.

Yours, F. W. HOFER, 14 E. Huerfano St.

Summer Prices Now On

Johnson likes to do business direct with the people. He doesn't have any trouble getting along with them. He knows there are several thousand poultry enthusiasts, like himself, that want his Old Trusty this summer. He is willing to accommodate them. That's the reason he has put his summer prices on early. Write him by next mail for the summer prices. It will push his factory force a little harder, but Johnson always delivers the goods.

Don't Get Things Mixed. Johnson has nothing to do with any other machine than Old Trusty now. All his advertising is done over his own name. That protects you. He sells Old Trusty

**On Forty Days Free Trial,
And Guarantees His Machine Five Years.**

Write him for his latest book. Of course it's free, and you'll find it interesting. Everything in it but the summer prices. Ask specially about them.

M. M. Johnson, The Incubator Specialist, Clay Center, Neb.

Black Langshans

I won the \$25 Challenge Trophy Cup for highest scoring cock, cockerel, hen and pullet at the great Chicago Heights Show, 1905. Also silver cup for highest scoring pen in Asiatic class. Also won at the Chicago Show, 1904. Stock and eggs for sale. Send for circular and price list.

R. A. HEWES, - Box 1, Crete, Illinois.

GOLDEN WEST RANCH - JOLIET, ILLINOIS

BAIR'S BARRED ROCKS

are daily proving their claim of being **LEADERS FOR EXHIBITION AND UTILITY**. Since 1901 they have won in my own and customers' hands 316 regular premiums. In my hands they won on every bird entered at Pan American Exposition, Missouri and Kansas State Shows and at the big Kansas City Shows, and finally in the great World's Fair Show. In Missouri's awards I won on every bird entered, winning 9 regular premiums, 1st and 2d cock, 3d and 4th hen, 4th and 5th cockerel, 4th and 5th pullet and 2d pen. In my yards the 200-egg hen is a reality. Lady Pan, the greatest living hen, has a record of 247 eggs for year 1903 and 11 blue ribbons won in the largest shows of the country. I have for sale fine cockerels from Lady Pan pullet line, and extra fine cockerel breeding pullets. Eggs from selected matings, \$3 per 15, \$5 per 30.

MODEL Incubators GROW IN POPULARITY

Because they Hatch Successfully

A new thermostat this season makes it the easiest regulated of all incubators.

To induce a breeder who has a large investment in incubators to change from one machine to another, an incubator must be head and shoulders above its competitors in point of efficiency. The Model is so good that the following large plants have adopted it, discarding other machines: Crystal Springs Duck Farm, Oil City, Pa., formerly 56 Cyphers, now 81 Models; Wm. H. Truslow, Stroudsburg, Pa., formerly 45 Cyphers, now 50 Models; Pine Tree Chicken Hatchery, Stockton, N. J., formerly 47 Cyphers, now 72 Models; W. H. McCormick & Son, Yardley, Pa., formerly 67 Cyphers, now 67 Models; Farrar Bros., Assinippi, Mass., large soft roaster growers, and many other smaller plants have changed over.

STOUFFER POULTRY FARM

Ducklings and Broilers

100,000 Annually

Mr. Chas. A. Cyphers, Buffalo, N. Y.

Harrisburg, Pa., Feb. 25, 1905.

Dear Sir:—I have been operating incubators for the last ten years, in which time I have hatched over three hundred thousand ducks and seventy-five thousand chicks, having used all the leading makes of incubators, and up to Jan. 1, 1905, was very well pleased with the Old Cyphers, which you were the inventor of. Having never operated any of your Models, the proposition presented itself to me, that as you were the inventor of the Old Cyphers and of your Model, with your experience in the manufacturing of incubators, you certainly would not put a machine on the market that was not superior to any of your former inventions; so, after ordering one and giving it a thorough test, having hatched 14% more ducks than with the old machine, I now firmly believe it superior to all others. The Model gives a more even temperature and a better circulation of air, and it is very much easier to keep in a clean, sanitary condition. The best is always the cheapest, if the first cost is more, as the results soon pay the difference; so I want the Model, and would like you to ship me, as soon as you can, 68 of your Models, to take the place of my present 68 old machines, and as soon as I can dispose of twenty that I now have of one of the other leading makes, I certainly will have you replace them with Models. With best wishes for the continued success you deserve in the manufacturing of incubators, having done so much for artificial incubation, I am, as ever, Yours very truly, C. A. STOFFER.

MODEL Brooders

GROW IN POPULARITY

Because They Rear Chicks Successfully

Perfected this season in point of detail, they have no equal at any price

To do the work successfully a brooder must be warmly constructed and heated in such a manner that there are no hot spots for the chicks to crowd against, such as a warm central dome or otherwise exposed heating surface. The air in the nursery as well as under the hover must be kept comfortably warm to keep the chicks from crowding.

The ventilation must be ample, and introduced in such a way that there is no draught on the chickens. A strong circulation of air is detrimental, in so much that it requires a much higher degree of heat to keep the chicks comfortable when the air is perceptibly moving. It must be well lighted, as nothing keeps a brooder so free from disease germs as light. In a dark, close, stuffy brooder chicks soon develop tuberculosis, familiarly known among poultrymen as "going light," one of the greatest causes of mortality among brooder chicks.

It must be roomy, as otherwise the chicks cannot properly exercise. It must be easy to clean and care for, as otherwise the attendant will neglect it. All these important features are found in the Model Colony Brooders as they are found in no other.

In this brooder the nursery is double-walled, insuring easy heating. The roof is covered with a layer of hair felt, making it sun proof; and tinned, making it water tight. It is ventilated by diffusion, the warm air passing gently downward through a burlap screen in the top of the hover. No perceptible air movement is felt by the chicks. The hover and nursery are amply large, and the exercising room is moderately warmed and very roomy, and the whole brooder is light and cheerful and easy to care for. This brooder has won more friends in one short season than any other brooder on the market, because it is easy to raise chicks in it.

The Following are Fair Average Reports on this Brooder

We used one of your Model Colony Brooders last season, and we found it very satisfactory in every respect. I think I would be safe in stating that it is the best brooder that we have ever used. It is not very often that we make a statement of this nature, but of the the brooders used so far, considering the health of the chickens and the amount of oil used, I think yours is superior to anything I have used to date.

Yours very truly,

W. R. GRAHAM.

Manager and Lecturer, Poultry Department, Ontario Agricultural College, Guelph, Canada.

I am using 14 Model Colony Brooders, and they are simply perfection for outdoor work. I feel justified in saying that they will raise every chick committed to their care that can be made to live in any manner.

Yours truly,

W. H. HARDIN.

Supt. Valle Crucis Farm, Valle Crucis, N. C.

I wish to say that I used three of your Model Colony Brooders last season, and I have no hesitancy in saying that they are the best outdoor brooders that I ever put a chicken in. I take pleasure in recommending it, not to aid the manufacturer, but to aid and benefit those who want a practical brooder.

Very truly yours,

FRANK W. GAYLOR.

Manager Gedney Farm, White Plains, N. Y.

I must say the Model Colony Brooders are just simply immense. They are the best we have ever used, and we have been using brooders for 25 years.

Very truly yours,

J. C. FISHEL & SON.

Hope, Ind.

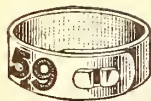

I think you have the right idea in a brooder. It does its work to my entire satisfaction. Have run one through three broods only losing one chick.

PHONE NEWS FOR FARMERS

GREAT ACTIVITY AMONG FARMERS

Everywhere farmers
are awakening to modern
ideas.

Just now there is great
activity among farmers
in establishing and build-
ing telephone lines
all over this country.
The telephone saves
time in getting
help in a hurry;
keeps the farmer in
touch with the mar-
kets at all times, and
in case of emergency
gets assistance from
neighbors or the city
without delay. The
building of private and
party lines has been so
simplified and cheapened
by the introduction of

Stromberg-Carlson Telephones

that every neighborhood,
no matter how small, can
well afford its own tele-
phone line.

For farmers lines none
but the best telephones
will do—instruments that
are practically perfect,
that do not require con-
stant adjusting and
“tinkering” to keep them
talking right. There are
many telephones offered

to farmers that are
actually not fit for
such service. It
pays to get good
instruments at the
start. Stromberg-
Carlson Telephones
meet every need of
the farmers line.
Write for book F-81
“Telephone Facts
for Farmers” how
to organize your neigh-
bors and build a line.
Ask for book-81 telling
how successful lines have
been built.

BILL THOMPSON'S BROODER

He calls it **THE BUSY BEE**. It's the only real low down brooder made. It
has no legs, no platform, no run way. Chicks run out directly on the ground. Don't
buy any kind of a brooder until you investigate this one. The Busy Bee Brooder is
just what you want, poultry breeder. The greatest improvement in brooders that
has been made in years. Size, 3 feet square, 100 chicks. Price, only \$5.

BUSY BEE INCUBATOR

It's the most successful small hatcher sold at a small
price ever placed on the market. The walls are double
and packed with non-conductor. It is the only small incubator made in this manner.
All others are cheap single wall machines. It is self-regulating, needs no moisture,
safe and durable. Warranted to hatch equal to high priced ones. Just right for the
small breeder and fancier. It's not a toy. Holds 65 eggs, price only \$8.00.

We Have Discovered The Secret

Sunflower Seed Will Make Hens Lay In Winter

It has been our good fortune to discover the secret. Nature, in her infinite wisdom, provided a plant, the seed of which will increase egg production and will assist poultry through the molting period. This plant is none other than the old-fashioned Sunflower that occupied such a cherished spot in our grandmother's garden. It is easily grown and will yield a good crop anywhere. The

American Giant Sunflower

which we have grown for years and have perfected to a high degree, with proper cultivation produces mammoth heads measuring from 2½ to 4 feet in circumference, weighing from 5 to 10 pounds each, and grows 3,300 strong, healthy plants to the acre.

Sunflower Seed is a natural feed for fowls—takes the place of "dope" mixtures. When properly fed brings birds through the molting season in one-half the usual time, with better plumage and better health than by feeding linseed meal, cottonseed meal, or any of the numerous "doctored" preparations offered for this purpose. It is nature's provision, works in nature's way, and produces natural results.

Last year we supplied seed to poultry raisers in every state in the Union and many in Canada. Results were so satisfactory the indications now are that we will have to hustle to fill orders for next season. However, we had a splendid crop and delight in hustling, so send in your orders early and be ready to plant an acre or more. Give it a thorough test, it will greatly increase your poultry profits.

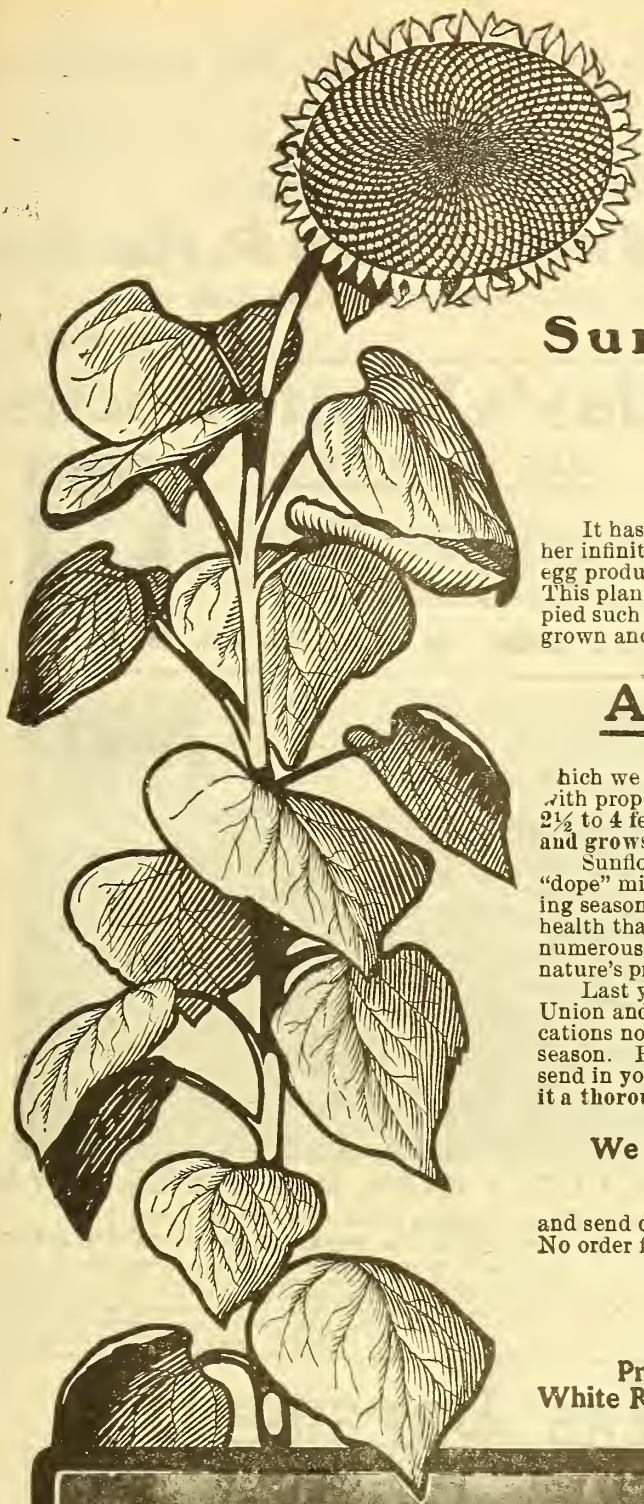

**We Send Enough to Plant an Acre, Express
Paid, For 50 Cents**

and send directions how to plant, grow and harvest, with each order. No order filled for less than 50 cents. Address all orders to

The Best Records of Modern Years

...ARE HELD BY...

Bright's Barred Plymouth Rocks Brown Leghorns

First Cockerel
First Pen

Madison Square Garden
New York, 1905

Barred Plymouth
Rocks

Winning this crowning honor on cockerel for three successive times. Our only attempts. Eleven straight wins on Barred Plymouth Rock cockerels back from date.

Seven out of Ten Firsts at St. Louis Exposition

The largest and most representative show ever held in America. Our Leghorn record here has never been equaled except by us,—four firsts. Our record of 1, 2, 3, 7 on hens against the best winners of this country was the distinctive feature of the Leghorn exhibit. There were others: 1, 2, 4, 7 cocks, 1, 3 pens.

Six out of Ten Firsts at Chicago, 1904

shows the quality of eastern birds and incidentally birds of our raising in western competition. Our wins of 1, 2, 3, 4 cocks; 1, 2, 4 cockerels, as well as 1, 4 and 5 yards on Barred Plymouth Rocks staggered our western competitors, who came loaded for bear. Our Leghorns won practically the same.

Three Hundred Superb Breeding Cockerels for sale at Reasonable Prices.

Nothing would do your male line more good than one of our line-bred males bred from our best producing prize winning sires. Our pullet breeding males gave immense satisfaction last season and will give even better this season. Remember our cracker-jack females can win in the open class, it takes four to win in pen. There's where we win. Brothers and sons of these for sale.

EGGS

from our best pens \$5 per sitting, \$25 per 100, as they run. Specially selected setting to suit purchaser \$7 to \$20 per setting. Orders now being booked. Don't fail to get our egg circular price list, etc.

THE BATTLE OF THE BREEDS.

Position of the Various Varieties Five Years Ago and Today.

The Steady Advancement of the American Classes and the Strong Hold They Have Secured—Some of the Most Important Changes as Shown by the Record of the Show Season of 1904-5—Future Position of a Number of the Breeds—Something for the Breeders of White Varieties to Seriously Consider.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The show season of 1904-5 was a most successful one. There were a larger number of shows held during the season than ever before in any one like term. Many of the leading fixtures, like Chicago and New York, were compelled to limit the number of entries. The public interest in standard bred poultry was never as great as it is now. This is because the standard bred poultry business and its direct connections, the incubator and brooder and food product manufacture, have taken their proper place among the great commercial industries of the country. Standard bred poultry now represents the highest type of commercial poultry, is the standard of excellence by which all poultry sold on the public counter is measured. So it is that the public is becoming daily more interested in the poultry exhibitions.

A careful study of the various classes at the shows of 1904-5, taken as a whole, discloses many facts of special interest to the fancier, and also to those who are about to enter the fancy or to engage in the market poultry business.

There is a rapidly shifting movement in the position of several breeds and varieties. And it can be said that these changes are along lines of advancement toward better poultry—the better show bird, market fowl and egg producer combined.

The American classes lead as they have for a number of years, the Mediterranean classes next following. In the American classes there have been many show room changes during the past few years. The White Wyandottes are still the leaders, having passed the Barred Rocks some time ago, as to numbers shown. This may be chiefly due to the splendid organization of White Wyandotte breeders. Still, this variety has merits all its own which will, we think, enable it to easily maintain its advanced position. The headway made by the White Rocks has been very great. Each year they have come stronger in numbers shown. This is true as to the larger and more important shows as well as to the lesser exhibitions throughout the country. We believe it will be a close and interesting race between the White Wyandotte and the White Rock for first place in the show room and breeders' yards, during the next five years.

The Barred Rock retains a strong hold. The foundation is still firm, and can bear almost any weight that may be builded above it. The Barred Rock has never broken faith with a man who gave it intelligent care. It is the idol of many of the world's foremost poultrymen, and the bread-winner in countless homes, where it will never be superseded.

The Buff Rock has recovered from the effects of the setback it sustained a few years ago, and has come rapidly forward during the past five years. The magnificent display of this

variety at the World's Fair, St. Louis, both in numbers and quality, is proof positive that it has a strong hold on the fancy. It has had a greatly increased representation in the show room during the past three years.

There has been increased activity among the Buff Wyandotte breeders during the past two years. It is a fact that during the season of 1904-5 this variety was shown in larger numbers than at any time since the exciting boom days of five years ago. In the best and largest shows they have been among the leading classes.

There has been marked activity by Silver Laced Wyandottes. For a series of years this old and beautiful and valuable variety was in retirement. The country had been filled with poorly bred specimens of the variety during the days of its great boom. The people who were thus deceived found it impossible to breed them true to color. The bad blood controlled, and many breeders gave up in disgust. A few of the faithful friends of the variety continued to breed them as they should be bred, realizing that their great beauty and unsurpassed merit would sooner or later place them well forward among the most popular of fowls. There they are today, and their numbers are increasing.

The Golden Wyandotte—"the beauty breed"—for a brief time occupied a very prominent place in the show room. All at once, with its popularity at the zenith, they stepped aside, and for a number of years have not been numerous in the exhibition halls. Now, under the fostering care of a strong club, it is slowly coming back to its own.

Partridge Wyandottes have made wonderful strides during the brief time it has been recognized by the American Poultry Association, and is very popular as an exhibition fowl. It is far in the lead of the Silver penciled variety.

Black Wyandottes have made no material progress as an exhibition fowl. They possess merit but do not seem to meet with public favor.

In Leghorn circles the change in the position of the rose comb varieties is the most striking feature. During the past three years there has been a forward movement by the rose combs. They have come on very rapidly. This movement has been general in all sections of the country. The fanciers and breeders behind these long neglected varieties have done some very shrewd advertising and vigorous pushing. They have interested the public in their stock. As there is much truth in the claims made for these varieties we may expect to see them attain to a position even more secure in public favor. The S. C. Brown still lead in numbers shown, closely followed by the S. C. Whites with the S. C. Buffs well up. The R. C. Buff is being pushed by a number of fanciers, but as exhibition fowls they are still very crude. Black Leghorns are destined, we believe, to take advanced ground. They are in good hands. The Duckwing and Pile Leghorns will be vigorously pushed by a few breeders.

There is a steady forward movement in Minorcas. The S. C. Blacks are more popular than ever before, and the R. C. Blacks are fairly leaping ahead. The demand for them is greater than the supply. The men who brought out this variety builded wisely. They did not make the common mistake and place them on the market too soon. They now breed true to form and color. It would seem that in a few years this variety should be among the popular leaders of the Mediterranean classes. The S. C. Whites are possessed of strong friends who are annually bringing them forward.

Orpingtons continue to grow in popular favor, and annually their numbers become greater in the show rooms. They have taken a strong hold on fanciers and breeders. We predict that the Orpington will be the means of removing the prejudice

the American people have against flesh-colored poultry as market poultry. The Orpington has given positive testimony that the best market fowl need not of necessity possess yellow legs and skin. The Orpington has the leg and flesh color of the great American bird, the turkey. This is a strong ally. The S. C. Buff variety is still in the lead. It was predicted that the White Orpington would give the White Wyandotte and White Rock a hard chase, but it has not yet amounted to even a race, although the White Orpington is steadily coming forward. The Black Orpington is a bird of great beauty and built on utility lines. It ought to be more popular than it is.

A new meteor has been flashed across the sky, and while perhaps not of the first magnitude in brilliancy, has, nevertheless, attracted a great deal of attention. The Columbian Wyandotte has certainly secured an audience. "The breed with the color markings of the Light Brahma with no Light Brahma blood in their makeup," as one of the originators puts it, was decidedly in evidence in the show room this season. There can be no doubt that in many cases the Light Brahma has been used by breeders of this variety, for there is a decided tendency to feathered shanks in many families of the Columbian Wyandottes. The Brahma blood has helped fix the desired color markings, and this is what it was intended to do. The Columbian Wyandotte is a neat, clean and decidedly attractive fowls and if handled as judiciously in the next few years as it has been in the past will surely take a prominent place as a fancier's fowl.

There will be more than passing interest in the Partridge and Silver Penciled Rocks. They will be in demand when perfected. They are strikingly handsome. The American people like novelty.

Rhode Island Reds have come to stay. They are increasing in popularity very rapidly. They are large classes in all the shows. Maybe when the bitter war is over, when peace has been restored and wrongs righted, when self-appointed guardians of the breed have been retired by the men in the ranks, the Rhode Island Red will come into possession of its own. The Single Comb variety is marching on, unhindered by the discord within the ranks of the Rose Comb breeders. The position of the Rhode Island Reds as a fancier's fowl and as a utility fowl, too, is secure.

The Hamburgs and Polish are still shown in all their old-time beauty by fanciers at the larger shows. The Houdan continues to lead all the French breeds in numbers shown.

Indian Games have fallen off in the number of entries and it would seem are not being bred to the extent they were a few years ago.

The Black Langshan—the lordly and beautiful Langshan—equalled by few as a show and utility fowl, now occupies a place in the show room in striking contrast to its old-time position. Here and there we see a goodly class of them, but on the whole they are not shown in anything like the numbers they were a few years ago.

The Buckeye Red has yet to make a record. It enters a field already crowded, but there is always room for merit. We shall see.

As exhibition fowls the Asiatics have not more than held their own during the past five years. In each of the larger and more prominent shows a few extra choice specimens are seen, but they are no longer large classes. New England is still loyal to the good old Light Brahma and at the Boston show a good class of extra choice specimens are shown. Cochins, with the Buff leading, the Partridge a close second, are not seen in greater numbers than they were five years ago.

This is the condition of affairs as regards the show room strength of the various breeds and varieties today. There will be changes of positions during the next five years beyond any doubt.

Let us consider the matter of changes in the different breeds and varieties as to form and color markings. Has there been decided improvement? Yes and no. The most marked change has been, and very naturally, too, in the new breeds. Here there has been great improvement. In uniformity and evenness of color much has been gained by Barred Rock breeders. This improvement is very noticeable. Now it is not uncommon to find specimens of this variety possessing the same shade of plumage color throughout. It appears that this improvement is more marked in the males than in the females. In shape improvement much has been accomplished. Distinctive Rock shape has been carefully guarded.

In White Rocks much good work has been done. Size of comb has been much reduced. Proper attention has been given color and shape. Buff Rocks are better in color and shape than they were a few years ago. The brick shade of color has practically disappeared. There has, too, been much improvement in head points, especially as to comb shape and size.

The improvement in Wyandotte shape is most marked. The Wyandotte is essentially a bird of curves. The desired shape—the typical Wyandotte shape—has been secured and can be easily retained. The long, sloping back is seldom seen now. Length of neck and shanks has been reduced. All these distinctive characteristics must be retained to keep the White Wyandotte in its leading position.

We think it is going to require almost superhuman efforts to retain size and vigor in White Wyandottes and White Rocks if the now imperative demand for absolutely chalk white plumage is made permanent and fanciers breed from only such specimens. This is an important matter, and sooner or later must be squarely met by breeders of these varieties.

Leghorns other than Buff have made but little improvement in color markings. Shape has been somewhat improved. The straight-up tail of former years has been lowered several degrees. Head points have been benefited.

Buff Wyandottes have been bettered in color. The females are now bred near to perfection in color.

Orpingtons are being toned down in color and much improved in shape and head points, especially in combs.

The S. C. Black and S. C. White Minorcas have been so good for so long that improvement of late years has been very slight. It is a matter of retaining the desired shape and color rather than securing it. There has, however, been improvement in head points and there yet remains work along this line.

The breeders of Partridge Wyandottes have made more and better progress than was ever before made by those in charge of a new variety. Color markings have been thoroughly established, and it is not uncommon now to find specimens of this variety as well colored as the best Partridge Cochins. Size never bothered the Partridge Wyandotte breeder. That he had at the start. It was shape that for a time barred progress. But this has been secured. It is the standard-weight specimens of this variety that possess the required shape. The extra large specimens—and many of them are over standard weight—are, very naturally, lacking in true Wyandotte shape.

The Silver Penciled variety has not taken as strong a hold on popular favor as have the Partridge. But they are in good hands and will be rightly established in time.

But little improvement is noticeable in the older breeds. In speaking of Brahmas and Cochins, Mr. John H. Robinson, editor of *Farm Poultry*, says:

"The Brahmas and Cochins of 1900 were as good as those of 1905. The Asiatic fowls from 1865 to 1890, say, made great advances in both shape, size, color and markings. Compared with their distant ancestors, the Asiatic fowls of today show a great improvement—a refinement of figure, richness of color and accuracy of marking, which give to them the appearance of fine breeding. But during the past five years, and probably a considerably longer period, they have apparently remained stationary. They are big, beautiful fowls—but they are what they were years ago. Can they be improved no further? Have they attained their highest and most perfect development? One can hardly say this, and yet, if this be not so, why do they not advance?"

New England is the home of the Light Brahma, and the Brahmas and Cochins shown at Boston each year are representatives of the best in America. We quite agree with Mr. Robinson.

One reason why the Light Brahma is not shown in as great numbers as it used to be, and is not so generally bred as it once was, is, in our opinion, very plain. The eastern and western types of the Light Brahma are not at all alike so far as shape is concerned. In the west the original type is adhered to. These in comparison with the eastern Light Brahma are long of back and tightly feathered. They are the kind of Brahmas I. K. Felch made and still fights for. And it must be said they are the kind of Light Brahmas the Standard of Perfection calls for. The winning Light Brahmas in the east are more heavily feathered and have somewhat the Cochin shape. That the eastern Light Brahma has been Cochinated to considerable extent is a matter of record. With these two types battling for supremacy it is very evident that the breed must suffer, and it is not difficult to account for its falling off in the show room, and not at all strange that many fanciers hitherto breeding this fowl have discarded them and taken up a breed in which there is no division of opinion as to shape among its friends.

Standard bred poultry fanciers are at work constantly in the betterment of their fowls, along lines of utility and beauty combined. The improvement must of necessity be slow, but it is surely being made. The standard bred poultry business is on a better and firmer basis today than it was yesterday. That foundation will be stronger and more secure tomorrow than it is today.

THOS. F. RIGG.

EGGS FOR HATCHING AND THEIR CARE.

A Great deal Depends on the Care Given Eggs Intended for Hatching—The Proper way to Make a Nest for a Setting Hen—Care of the Hen.

Written by Rev. C. E. Petersen.

It is of course a given fact, and beyond refutation, that there must be all the elements of a chick inside the shell of an egg before we can expect to have a chick emerge from it, but the part the poultry keeper plays in the proper feeding, care and management of the breeding stock, which are to produce the eggs from which we expect the chicks to come, is not so well understood as might be desirable for a successful hatch.

That the chick in the egg needs as much, and perhaps more, care than the chick out of the egg is as much of a fact as our first statement, yet for all that not so generally accepted by the many.

A great deal of unsuccessful poultry keeping may be traced directly to improper hatching methods and the lack of care

all necessary, and our experience goes to show that eggs for hatching will do better with as little turning and handling as possible. The temperature where the eggs are to be stored should not be too low nor too high, and we have found that a cellar in which vegetables can be kept from freezing is about the best place to store eggs for hatching purposes, providing it is well ventilated, sweet and clean. When an egg has become fertilized it contains a minute speck, or germ, which is alive and under proper conditions will develop into a perfect chick.

It was at one time believed that a complete chick, but in miniature, was contained in germ and simply by the application of heat grew into the fully developed chick by the enlargement of its different parts.

This theory is not accepted by any scientist or biologist nowadays, the cell growth theory being the one commonly accepted.

The contents of the egg has no more to do with the chick than has the milk to do with the baby; it furnishes the elements of growth on which the embryo grows and matures into a perfect chick.

From this it can easily be seen that care is necessary to preserve the contents of the egg as near as is possible in the condition it was in when it was gathered from the nest of the hen which laid it.

Where pedigree breeding is the method of keeping the strain

extended to the eggs from which we expected chicks that would grow and live, but instead of that gave us nothing but trouble from the time of exclusion to the time of its exit out of this world.

That the proper care of our breeding stock has much to do with the strength and fertility of the eggs used for hatching purposes we all know, and therefore well ventilated houses, fresh air and exercise, with good and wholesome food, is one of the factors to be used in supplying hatchable eggs with a good strong life germ inside of them.

All this care, however, may be wasted if the eggs do not receive the proper care between laying and the beginning of their incubation.

All the eggs for hatching should be carefully gathered and stored away, preferably in bran, to protect them from undue evaporation of their contents.

It is the usual plan to put them with the small end down, but it matters little whether the eggs are put small end or big end down, or on their side, as long as care is taken to turn them every now and again, and be sure that your turning be done gently, so that it will not amount to the kind of turning which is simply to be called rough handling. Where eggs are not to be kept for more than a week's time no turning is at

intact it takes sometimes from two to four weeks before eggs enough can be accumulated for incubation, and during this time it is necessary to preserve the eggs in such a way that no evaporation of the contents takes place; this can be done by (as I have already stated) packing the eggs in bran, after having wrapped each egg in paper.

We do not believe, however, that it is a good plan to keep eggs for hatching longer than from a week to ten days, yet we have secured good results from eggs kept even as long as full six weeks, but as a general thing this is not at all to be recommended if success is to be expected.

The stimulation of a female's ovaries for increased egg production is detrimental to fertility and strong germ development; it should never be resorted to where the breeding of stock birds is the main issue.

Sexual stimulants administered to a cock bird, that because of his years is passe, is also to be depreciated, as no good can be accomplished by such a course of proceedings.

If he is not in the prime of his powers he cannot influence his progeny (if any) so as to give it his own desirable characteristics, and in most every instance where such means are resorted to weak germed eggs result. Eggs for hatching should be gathered several times during the day in cold weather,

and where the house is easily rendered very warm, in the early summer months, the same care in gathering the eggs should be observed, as in the first instance the egg may be chilled, and in the second overheated so that the germ may be started into activity.

After eggs for hatching have been received from any considerable distance they should be unpacked and allowed to stand for at least twenty-four hours before being put under the hen or into the incubator. The constant jarring received on the journey will be counteracted by this resting of the eggs and result in a better hatch.

But the hatching of the eggs by hen or incubator deserves our notice, as it is here the greatest mistakes are made, sometimes for want of a little instruction and sometimes because instruction is not accepted.

Where an incubator is to be used, and in very many cases for the first time, carefully read the instructions sent out with the machine and do not mend them, but follow them to the letter. The manufacturers of the machine are in a position to know how their machine should be operated and it is for their best advantage that the machine turns out as large a hatch as possible; therefore rest assured that they have experimented to this purpose so that their instructions will, if other things being equal, give satisfactory results.

Where the natural incubator and our trusty friend the hen is to be used a great deal needs to be said on the subject of letting her alone.

The nest should be properly constructed and so situated that the hen brooding the eggs contained in it will not be molested.

In making the nest pay some attention to the rules that nature has taught the hen and which, like many other simple things in nature, are of far more consequence than most persons suppose.

All birds like secrecy in their nests and even the tamed hen will often not proceed with her work of nest construction if she is watched, so it is necessary to use a little strategy to get to see her at her work.

She seats herself on the ground and, loosening the earth with her strong claws, she keeps turning round as she places sticks, weeds or straws in a circle round her.

In turning round her breastbone moves the loosened earth from the center and leaves it in a ridge round the nest, under the vegetable covering, at exactly the right distance to keep the eggs in and the cold air out. The diameter of the nest is thus measured by the length of her breastbone, and the bottom of the nest is flat like the bottom of a plate, not curving like the bottom of a saucer; so that whilst every egg is kept in the nest by the outside rim, the outside ones do not press on the center ones.

Now why is this of so much consequence? Simply because it facilitates matters as far as the brooding hen is concerned in the turning of and moving of her eggs around the nest.

Make a nest as most persons generally make it, with a saucer-shaped bottom, and each outside egg pressing hard against the center ones, and then try how difficult and dangerous it is to make the eggs travel about in such a nest, and you will have an immediate answer to the question so often asked, why eggs hatch so much better in a stolen nest than in the one you made for the hen. Go about it in the same way the hen does, when you construct the nest, and make the nest box large enough to contain a plentiful supply of fresh, moist earth, and you will find that you have at least solved one of the problems connected with a successful hatch.

No eggs are fit for sitting on unless the shells are strong, smooth and regular, and the eggs of the usual size laid by the hen. The badly shaped eggs seldom hatch; the thin shells will endanger all the other eggs in the nest. The fine large eggs laid by hens hatch larger chicks than the smaller eggs laid by pullets, but the smaller chicks from the pullets are often more vigorous and will overtake them at a month old.

It has been said in books on incubation that the Egyptian professional hatcher can tell if an egg is fertile by looking at it. This we do not believe to be possible, but it is possible to know when an egg has been incubated, say for from three to five days, to tell it, and we can almost to a certainty tell it by touching it, as an infertile egg will cool rapidly and the hand is very susceptible to this change of temperature. Tasting out of the eggs is an expediency which is of much value to the poultryman, but I would not advise the beginner to do it himself thus early; wait till the tenth day, and then even a tyro can make no mistake in the selection of the fertile from the infertile eggs.

Last season we received a letter from a man to whom we had sold eggs, in which he stated that he had tasted out the eggs after the hen had been brooding them for two days and that most of them were infertile and that he did not expect much of a hatch.

Fortunately he left the eggs under the hens and we wrote him to leave them there till it was time for them to hatch and then report to us, which he did, with the result of a two-third of a hatch.

Ignorance is much more in evidence than dishonesty when it comes to the reports received from dissatisfied customers who were disappointed in the outcome of their hatching operations from eggs bought for this purpose.

Another fruitful source of an unsuccessful hatch is the almost irresistible impulse in the beginner to see how things are progressing the day the hatch is expected to come off.

Let the hen alone; no good can come from disturbing her in any way; make a resolution that you will not touch her, no, not even go near the nest, till the twenty-second day, when if the hatch is a good one you will find a row of little heads peeping out from under her.

By putting the hand under the hen to find out if there are chicks hatching you are endangering the whole rest of the uncompleted hatch by letting in a lot of cold air, which will let the warm moisture so necessary to a successful hatch out of the nest and in consequence the unhatched chick will dry fast to the shell, a prisoner to death, in most every case. Again, don't fuss with the eggs by immersing them in water, sprinkling with water or any number of things generally recommended by the knowing ones in the science of incubation, about which they know as little as it is possible to know.

Under no circumstances should a hen be fed on the nest. She requires a short change of position, as much as she requires food or water, and the more she is fed the more she will suffer in her effort to keep her nest clean.

The brief cooling of the eggs is necessary to promote the change of air in the large end of the egg, whilst anything that compelled the hen to pollute her nest, or even the air near it, would greatly endanger the health and lives of the embryo chickens.

Most hens will not eat a great deal while sitting, so don't worry because of that; it is evidently nature's intention that the sitting hen should lose flesh rapidly, and it is far better for her future moulting and general well being that she should do so.

A heavy, fleshy hen rarely makes a good nurse or sitter; she often breaks her eggs and at the time of hatching most generally tramples more or less chickens to death.

When an egg has been broken and its contents discharged in the nest it will be fatal to all the rest unless at once attended to.

It varnishes the shells and prevents the necessary passage of air through them; it makes them adhere to the feathers of the hen and causes a repetition of the accident; it makes the eggs adhere to each other and to the nest, so that the hen cannot properly turn and move them about; and it soon poisons the air in the nest and makes it fatal to the embryo chicken.

When such an accident happens the eggs must be well soaked in water 100 degrees and cleansed with a cloth, the nest entirely renewed and the hen's feathers looked to.

Some time another kind of accident will endanger the hatch, as when a hen goes on the wrong nest, or leaves it, and when you arrive you find every egg cold, and most all hope gone as to receiving any results from your trouble.

If the eggs have been under the hen two weeks or perhaps some days more, it is well to heat a woollen cloth, put eggs in it, and cloth and eggs into a warm oven, until another hen is procured, and there is hope that a part of the eggs may hatch.

If early in the hatch, say the first few days after the first week, it is almost useless to resort to any remedy, as the embryo chicken is most easily killed at this stage of its existence, yet, if the eggs are valuable, the same means may be tried, so at least to be sure that all was done that could have been done to secure a hatch.

The French method of preparing poultry for market is acknowledged, in some respects, superior to others. The birds are made very fat and plump, and are manipulated to increase plumpness. A few feathers are left on tail and neck. The skin is white and delicate. Each carcass is tied with a ribbon, and is shown back uppermost instead of breast up, according to the English as well as our own style.

The fowls of the American classes are prolific layers, and as market poultry are unexcelled. Mr. Adams will find that there is more money in eggs than in market poultry. We would advise him to make a specialty of the egg trade. There will be, in the natural course of things, more or less market poultry to dispose of.

You can soon spoil a good reputation with poor stock.

SUCCESS WITH BROODERS.

How to Manage a Brooder in Order to Get Strong, Healthy Chicks.—How to Feed and Care For Chicks.

In writing on this subject, I shall probably run up against the pet theories of many popular writers, but as what I am about to say is based on practical experience, and not on theory alone, I have no apologies to make.

In order to be successful with a brooder, we must have a brooder that is constructed on right principles, else, instead of success, dismal failure will be the result. There are a few brooders manufactured and offered for sale that will do the work to perfection, and there are very many more that are nearly or quite useless and in some cases worse than useless for many thousands of chicks have been ruined by their use. Don't let any manufacturer of brooders convince you that it is necessary to have a self-regulating brooder, for you do not need anything of the kind.

The successful brooder must be so constructed that the chicks can accommodate themselves to any degree of temperature which they may require, and it is surprising to see how quickly the little things will learn to take advantage of such opportunities. When the temperature cools down a little they may be seen to draw nearer to the source of heat, and when too warm will retreat to a cooler place again. If the brooder is of equal temperature in all sections, the chicks cannot thrive, for some of them will require more heat than others. You may confine a dozen men in a room heated to 70 degrees, and some will be too warm, and some will think it decidedly cool, while others will declare the temperature correct, consequently they could not all remain in the best of health if so confined for any length of time, and what is true of men is also true of chickens in this respect at least, so it is obvious that the successful brooder must be something more than a box heated alike in all sections.

I have used many brooders of as many different styles, heated both by hot water and hot air, and have made several myself, and while I do not propose to give plans for making a brooder, I will say that the brooder, to give best results, must not only be arranged so that each individual chicken can find just the degree of heat he may desire, but must also be thoroughly and perfectly ventilated; and, to my mind, this means a constant supply of pure fresh air passing through it at all times. In order to accomplish this, cool air must come in from the outside and after being heated by coming in contact with the heater, pass up into the brood chamber and must thoroughly circulate through it, then pass out into the open air. Another important feature is such construction as will insure good facilities for cleaning, for the brooder *must be kept clean*, or you cannot expect to succeed, and if the cleaning process is attended with too many difficulties there will be times when the most careful attendant will be forced to neglect this most important duty.

The lamp must be so protected as not to be affected in the least by wind or drafts of air; look to this matter carefully before intrusting your brood to any brooder, for some otherwise good machines have failed on this account. Let me here say I have not the greatest faith in out of door brooders any way (not on account of the above trouble, however, for most brooder lamps are proof against winds), but while I use them to some extent, I have never raised as good chicks in them as I have indoors, which I account for on this wise: there are times when the weather is stormy for several days at a time and chicks must be confined inside, when they will worry and fret to get out, which hinders growth and they get a set back, which they never overcome, while those in a small brooder house can have the run of the same and scratch in the chaff and are contented and happy, and here lies a great secret in raising chickens, as well as all other live stock, and one must make such arrangements as will insure contentment and happiness to the greatest degree possible.

Another thing that must not be forgotten is the tendency to overcrowd the brooder. I care not how large it may be, unless it is divided into sections, no brooder is large enough for more than fifty chickens, and then the number should be reduced to thirty after they are three weeks old; at least this has been my experience. When men will advertise a brooder three feet square as being large enough for 100 chicks, there is something wrong. I don't say that they are dishonest; they may not be, but if they are not, they are certainly terribly deceived and are deceiving others, and if they are, they should be sat upon hard; and if ignorant, should be enlightened, that the deceptions be practiced no longer. I am very much adverse to calling a man dishonest till he has been proven so, for I find there are many men of many

minds, and we can't all see things in the same light, so like to be as charitable as possible.

One thing more about the brooder, and I will leave this part of the subject and give attention to the feed and care of the chicks. In buying a brooder, if it is intended for out of door use, be very sure it is absolutely waterproof. I have had some brooders from the manufacturers which have been very faulty in this respect, and after a very short time would leak badly; this is a bad defect, not easily remedied and very annoying to say the least. Such a brooder can be used under cover only, with success. In closing this part of the subject, I will say I very much doubt my ever buying or making another out of door brooder for reasons *herein given*.

HOW TO FEED AND CARE FOR THE CHICKENS.

This part of the subject is fully as important as the one treated above; in fact, to me it seems that no one part of the work is of more importance than another, for when one looks upon any one thing in the care of chicks as being of less importance than another that thing is quite sure to be neglected, and neglect in any respect is detrimental to the highest degree of success in any enterprise, and especially is

BUFF ORPINGTON COCK.

Winner of 1st prize at Gosben, Ind., January 4-7, 1905. This bird is solid buff in every section and produced some wonderful solid buff pullets last season. He heads one of my pens mated for the egg trade this year. Bred and owned by Will H. Schadt, Gosben, Ind.

it true in the poultry business. Contrary to the advice of most writers, I do *not* leave my chicks in the incubator till the hatch is completed, for my teacher (experience) has taught me it is better to look at them as often as three times during the day. (Morning, noon and night.)

Look through the glass door and see how things are progressing; there may be some chicks with shells dried on their little backs, which must be removed; and when there are a goodly number hatched out and dried off it is a good plan to remove them to the brooder, which has been previously heated to the proper degree; for if they remain in the machine they will be a hindrance to those coming out later. I know some machines are so arranged that the chicks drop down under the drawer when liberated from the shell, but I do not approve of such a plan, for the temperature is almost sure to be several degrees too cool for them, while wet, for they require fully as much heat until dry as they did while in the shell, and if it is hot enough under the drawer for them there is sure to be too much bottom heat to give a really good hatch, but care must be exercised not to keep the door open too long and by being expeditious about it I have never had any ill results from the practice, but have saved many chicks, which otherwise would have been lost.

Have everything needed at hand, make up your mind just

what you are to do, and then open the door and do the work quickly, close it up, and no harm will result. After they are all in the brooder and comfortably nestling on the sanded floor, I put in a fountain of water, of which they will usually partake before they are ready to eat, and never you fear its hurting them. Nature is the best judge in this matter, I am sure. This raising chickens without water I have no sympathy with whatever. It is a cruel and unwise practice, to say the least. I have found also that food will not hurt them if they care to eat it, no matter how young they may be, for they will not eat enough to hurt anything, so don't lose any sleep over that.

They will not eat much until they are two days old; then should be fed regularly. The best food for the first two weeks, I find to be crushed cracker moistened with sweet milk given three times a day, and millet seed scattered in the chaff, for which they delight to scratch between feed. After two weeks of this feeding, I continue the millet seed, but gradually change from the cracker to a cake made of two parts ground oats (hulls sifted out after measuring), two parts shorts, one part Indian meal and one part ground

ten days old, no matter how cold the weather may be. I once had a promising lot of chicks and the weather was so cold I did not dare to turn them out, but after two weeks of confinement they began to drop and I opened the door and brushed them all out with a broom, and after keeping them out about ten minutes let them in again. I repeated it several times during the day, until they would go out of their own accord, and the result was most satisfactory, for inside of two days they had all brightened up and they thrived wonderfully. Chickens reared according to the above methods if they have a fair range where good green crisp grass can be had and shade under which to rest in the heat of the day will thrive wonderfully and be a source of pleasure as well as profit to their owner. If any one questions my methods, I would like to say to such a one that my losses by disease are less than 5 per cent and my pullets lay young and constantly and I raise many prize birds every year.

There may be a better method than mine, but this one seems to answer my purpose better than any other I have tried (and I have tried about all), so I advocate its em-

SILVER PENCILED WYANDOTTE.

scraps; mix with water, put in a little salt and a little soda, and bake thoroughly. They will stow this feed away quickly, and it does one's heart good to watch them. When four weeks old, I leave off the millet and substitute cracked corn instead, and when they are well used to a soft feed, consisting of two parts ground oats (hulls left in), two parts shorts and two parts ground scraps, slightly salted and mixed with water, but never so wet as to be sloppy, this in the morning, with wheat at noon and cracked corn at night (sometimes changing the order of feeds), constitutes their food till the pullets are nearly ready to lay or till the weather gets so cool that they stand around idle, when I make them scratch for all dry food, and as the grass fails I give cabbage, boiled turnips, potatoes, clover or any vegetable food which is relished by them. Of course, they always have access to sand and gravel, and charcoal is sometimes beneficial, I think, but not always necessary. I think it pays me during the hot months of summer to give cool fresh water three times a day. I find that chickens must not be confined strictly to the brooder or house after they are

ployment. In closing I will say one may have the best brooder ever made and employ the best method of feeding ever devised and be lacking in judgment or untidy and careless about their work and the chicken business will be a failure with them, for if there is any occupation known to man that requires good judgment, constant attention, painstaking and care it is the chicken business.

My closing advice is let no sluggard embark in this craft.
Nash, Mass. M. M. SHURTLEFF.

A speaker at a Farmer's Institute said: "Yarded fowls are the modern improved egg machines. Fowls let run and given free range cannot produce as great number of eggs, for the reason that they convert a part of the food into muscle, and thus reduce their capacity for forming the eggs." In his own case, he said, he increased his egg yield 18,720 eggs last year by yarding his fowls.

Remember it is the food given, and not the breed employed, that gives us the rich flavored eggs.

GAPES---CAUSE AND REMEDY.

Gaps! Who said gaps? I have heard it every season since I was a small child and expect to hear it as long as I am kept in touch with poultry.

Shall I tell you of my experience, not theory, but my own personal observations and the personal chat with intimate friends?

In my youth my father had a two-story hen house, well lighted and ventilated, yet very warmly built of ship lap weather boarding and lined with matched flooring taken from an old house. We were farmers and my mother had the idea "if little chickens were kept off the ground for the first six weeks of their lives and allowed plenty of hay, seeds and gravel to scratch in, on the second floor of this hen house, that the gaps would be scarce," and they were.

I never saw a case of gaps in that loft when the chickens were not allowed to touch the ground until six weeks old; the chickens thrived well, too.

At one time a hen had stolen her nest and hatched her brood in the orchard and the chickens were perhaps two days old when caught and put into the loft with their mother among many other little fellows which had never

off the gaps, while a lousy bird is weak when the gaps come and is likely to die or be stunted in its growth by two diseases taken at once.

Are they diseases? One is taken from the parent bird, the other is taken up from damp, contaminated ground.

Again are they diseases, or is each one filth? Let us keep them as clean as possible, the cleaner in all ways the healthier the birds, providing other things are equal.

Perfect cleanliness is impossible. Hence, gaps. When first I hear the little birds sniffing I feed some turpentine to them in their soft feed--say a thimbleful in the feed for a hundred birds under a month old. Mix this thoroughly and increase the turpentine as the amount of feed consumed by older chicks. This nearly always checks the gaps with perhaps the loss of two or three in a flock of 100 chicks.

Another good way is to take a bottle of turpentine and pour it over the bottom of their coops and feed boards; it seems to kill or drive away the gap-worms.

Last June we hatched an incubator full of chicks, sixty-two in number, about the same time we had seventy-nine hatched by old hens. The incubator chicks were placed in a brooder in a dry floored shed and kept on the floor until about four weeks old, while the hens and chicks were

SINGLE COMB WHITE LEGHORNS.

Bred and owned by Elm Poultry Yards, Hartford, Conn.

touched ground. In a few weeks these little stowaways were seen gaping and three of them died while others got well, but none of the original loft chickens took the gaps.

For several years I followed this way of raising spring chickens, then came to my own home and had no loft. What was I to do?

I should say we now. We procured store boxes large enough to accommodate a hen and about twenty small chicks and not more than a foot deep. Into one of these we would put biddy and her newly-hatched brood, upon some chaff or hay seeds. This box is placed in the buggy shed, where we had a wire screen door facing the south. Here biddy is kept for about two weeks, or until the little chicks can jump or fly out of the box.

We have had five hens in this shed at a time, while each brood is penned in its own box and the hens all free. This will not do where the hens are quarrelsome, but ours are the Light Brahmas and very quiet and peaceable.

From these boxes we transfer the broods to separate coops with board floors, so that the chicks do not roost on the damp ground. But even with this care we see some gaps.

Now comes the care of a brood when we see the gaps begin to come. My neighbor says "she thinks that gaps are caused by lice." She says she does not lose many chickens if they are kept free from lice." While my experience has been that chicks free from lice are strong enough to throw

placed only a few feet away in another dry floored shed, but allowed to run at large with their mothers on pretty days and came back to roost at night.

We did not have one case of gaps among the brooder full of chicks and raised fifty-six of these to market size, while among those allowed free range we lost several by gaps and a few by accident.

So my mother's old theory of the chickens kept off the ground until a month or six weeks old is still more strongly impressed upon me as the seasons come and go. *Gap worms do not germinate on dry floors!*

Venetia, Pa.

E. B. McANULTY.

H. W. Collingwood says that we may have lime in our flour, lard in our butter, peanut shells in our coffee, sawdust in our tea, basswood in our hams and sand in our sugar, but the eggs cannot be successfully counterfeited. Our little friend, the hen, with her marvelous inside fixtures, will still continue at the old staid, putting her humble grist together, and shelling out this most miraculous of animal product--the egg.

A Brahma is always sharp-breasted unless it is hog-fat, while a Leghorn may be comparatively poor and yet have a plump breast, says *Farmers' Voice*. The difference is caused by the habits of the two breeds.

ABOUT RAISING CHICKENS.

A Few Timely Hints on the Care and Management of Young Chicks.

To many this is a very small subject and of too little importance to pay much attention to.

I find these are the ones who sneer at you if you say there is money in fowls and laugh at you if you speak of pure-bred fowls, just as though there was any difference. One said to me not long since: "An egg is an egg and a chicken is a chicken and I don't see any use in making so much fuss about pure-bred fowls."

I know this is a large subject and room for all to practice and improve. To raise chickens successfully there are several things to be taken into consideration:

First—I believe we ought to have the control of our breeding stock for several years back and be sure it is strong and healthy, well fed, well cared for and of standard requirements. Here is a good beginning.

Now, if hatched by incubator and raised by brooder, be careful and not over-heat them, for this is sure death. I read not long since that a sunny disposition was required to raise chickens and I believe it, for when you have to

kindnesses. But push right along and some fine day you will come out victorious.

If you have not got out enough chickens before June, hatch through June. If kept free from lice and shaded they will be nice chickens in the fall and do nearly or quite as well as early ones and lay almost as soon. If hatched too early they will moult in the fall and this will retard their laying until spring. It is a good plan to cull as soon as possible, placing the culs by themselves and fatten them for market and table use.

Place the pullets to be kept by themselves and feed for good frames and health; also the cockerels alone, as they bother the pullets and do not grow as well as when alone.

Those meant for breeding purposes should not be rushed but kept growing and allowed all the run possible, in order to make good, healthy, strong stock before cold weather.

St. Louis, Mo.

MRS. E. M. SINCLAIR.

SETTING HENS.

Old as the above subject may be it will always find some to whom it is new, as every season finds some commencing in a small way before venturing to try the incubator, and as the hen is the only means of hatching with many beginners a short description of the plan we have found most satisfactory may be of help to readers of AMERICAN POULTRY JOURNAL.

To be really successful one must begin further back than the mere act of putting the eggs under the hen, which means the purchasing of eggs from a reliable breeder of stock of known vigor and worth, for the chick, like members of the human family, has the right to be well born and should be given that right by proceeding as above.

After we have made things ready for the reception of the hen, who should have been left for three days on the nest to prove her good intentions, we remove her after dark to the nest prepared as follows: In a box about 12x14x20 inches we have turned on its side we place a shovelful of moist earth, loam preferred, in which has been mixed a small shovelful of coal ashes, and on this the nest material of straw without grain in it, shaping so not to leave too flat, neither so deep as to hinder the hen in turning the eggs—the form of a saucer is about right—and over all we sprinkle a good supply of lice powder. This done, we dust biddy freely with the same and consign her to her three weeks of lonesomeness. Have your nest room in a quiet spot sheltered and not too light, provide a dust bath, good sound grain and fresh water daily and twice during incubation dust the hen freely and you may be assured of a good hatch.

It is usual with us to set two or more hens at one time, as in so doing if the weather be such as to permit two broods may be given the one hen to mother and the other hen returned to the yards and other duties. Eggs should be tested at the end of ten days and all infertile ones removed, thus giving more room to the fertile ones and lessening the chances of nest soiling by broken eggs. Should this happen at any time, and it does frequently where hens are used, take a basin of warm water and wash the eggs, dry carefully and return to the nest prepared with clean straw and no harm has been done.

It will do no harm to confine the hen to the nest the first day by a screen in front of the nest and removing this the second morning, giving the hen a chance at feed and water, by which time in usual cases she will be true to her trust.

Agnew, Cal.

W. S. SULLIVAN.

The breast and thighs must be heavy in a good table fowl, in proportion to the rest of the body. In order to have thick breast meat and big thighs, these muscles must be used by the fowl, is the way *Farmers' Voice* reasons. In other plump breast, says *Farmers' Voice*. The difference is caused words, the flyer and scratcher will prove to be the best table fowl, for their lively habits give the muscles of the legs and breast work to do that renders them firm and fine, instead of leaving them flabby and full of loose tissue in the shape of fat.

From estimates made is is agreed that a hen can pay her board with one egg a week, providing the average market price for eggs averages 2½ cents each.

Late moulting hens are as a rule indifferent winter layers.

bury from one to six every morning in the "sunny cemetery" you must have lots of grit or give up.

The great mortality of chicks raised in brooders is caused many times by crowding or trying to keep too many in a small space. They are over-heated and lose strength, and no matter what you feed or how you care for them they will droop and die and you will see Darwin's theory carried out: "The survival of the fittest"—and sometimes there are not many "fittest" left.

Do not put over twenty-five together. Keep coop or brooder clean. Use lots of lime. Keep grit and fine sand on the floor.

For bowel trouble, use a few drops of carbolic acid in their drinking water. This is a sure cure.

There is no play-time during the chicken season. Clean! Clean! Watch for lice. Kill cats and rats, and if it happens to be the neighbor's cat you will very likely have a quarrel with him, for he will think more of his cat than he does of your chickens.

After they are feathered give them all the run possible and good, wholesome grain and you will feel that you are amply paid for your hard work.

One of your neighbors will want to "swap" eggs with you. Another will want to borrow your five dollar rooster, "just to try an experiment," and, of course, you will be rated selfish and stingy when you smilingly refuse these

JUDGES AND JUDGING.

A Few of the Many Things that will be Expected of the Poultry Judge in the Future.

The poultry judge of the future that officiates at our annual exhibits must of necessity be an able, patient, well balanced individual, with a development of his gray matter that surpasses in acquirement of judgment and discretion in passing on standard poultry the well trained mind of the most able interpreter of Blackstone or any other equally recognized authority on legal jurisprudence. Associations, individuals interested, or only seeking diversion must according to some associations and its members be entertained, instructed, privileged at any and all times to ask proper or irreverent questions, he must never lose his temper or be discourteous, even though a thoughtless few, or many, carry on a conversation, comment, criticism or crowd around him to suffocation. To keep sweet tempered, cool and serene, beyond reasonable bounds, must be his strong forte, otherwise he will be no good, because all these and many other features are to be met with at the poultry show, and as the greater majority do not give serious thought or study to standard requirements, they easily lose sight of the importance of a few features, absolutely essential to have an exhibit judged properly so that the awards are placed as they should be, on the best birds in every class. The poultry judge must to a large degree have all disqualifications well in mind when he casts his eyes on a standard specimen. As such disqualifications are not always conspicuous his mind must not make these his main point for consideration to start on, or he will at times find himself oppressed by the mental storm of resentment caused in the owners' and sympathizers' brains by the rude and unnecessary exposure of a favorite bird's faults. He must prove his fairness and impartiality by handling the unworthy birds with the same painstaking consideration that he does the most meritorious. His eye must be single to finding the most correctly shaped, combining in detail of makeup a harmony of parts, that accord in a great measure to what the educated breeder, student and fancier also know to largely fulfill standard requirements, so that when discussing the merits or demerits each may comment with interest and for the instruction of others whose knowledge and progress is not so far advanced. So his interpretation of the description of colors, bars, pencilings, lacing and shadings. His ability to show by comparison of the best, good, medium and poor, just where and what each section presents to his eye and judgment. The surface and undercolor of every variety must be as well and clearly known as the correctness for form for each breed. With this knowledge well drilled into his mind, and such knowledge can only be obtained by study, observation, practical experience as breeder, and an opportunity to put in practice a well formulated system, wherein he can allow play in its application, for small, medium or great faults, so that his work may prove uniform and when done with a class, show accuracy of discrimination to such a degree that others can see it with approval, without this natural and cultivated ability, judging poultry will prove uphill work, and have many disappointments in store for the ambitious candidate for recognition in this field. How then can poultry associations be of greater use to themselves than to have successful exhibits with awards made to the satisfaction of the greater majority of exhibitors? I will endeavor to answer from my viewpoint, and endeavor to give a partial solution to this annually debated question. Poultry associations are organized, or should be, for the purpose of education of themselves as a body of men and women that have a desire to learn what high quality standard described fowls are or should be. When such an organization is formed the questions are brought up when the show is to be held, what judge to employ, the distribution of officers under whose control the show should be conducted, etc. Then if properly cooped and all varieties are classified, there are several ways by which an exhibit can be judged with the least friction, disputes and contention. First, if the room is uniformly lighted so that the judge can work in the aisle from coop to coop, shut off that aisle until the class is finished; secondly, if the light is not good in all parts of the hall, arrange a place where the judge and his clerk can work unmolested by anyone and have the fowls brought in their coops. Another method that I have found the most satisfactory of any—and where there is the least room for friction or contention: Let the chickens be weighed as soon as they come in and have been fed and watered, put weights, band number, sex, variety and entry number on the score card, tack them on the coop, then they are ready for the judge and his clerk to mark down the sets as they are called. By this method I have seen all awards up on every class where the exhibit consisted of close onto four hundred entries, in just ten hours, and then there was ample time to devote to exhibitors and students, so that all

could have an opportunity to ask questions, and help make the exhibit a school of instruction and thus touch on and also point out, the good and inferior features of a class, variety or a specimen. One such conducted exhibit that I had the pleasure to judge three years in succession, I left with the good will of all, so far as I know, at any rate I had no occasion to hold ill feelings against anyone I met there in the three years and I have not the least doubt but what my successor too will prove equally satisfactory because every member of this association wanted to help make a success of the show, regardless of the possible winnings for himself.

Another too often neglected feature of a score card show is a suitable clerk, the importance of this position seems to nearly always be a secondary consideration, yet this position is one of as great importance as any, if not greater than any outside of an able secretary and good superintendent. A clerk that wants the job to learn how to judge should never fill this place, unless he has had much experience or is an expert in putting down figures. The best clerks as a rule are a man or woman who can concentrate their mind on figures and that don't know one chicken from another, so far as standard breeds are concerned. Then with a little patient instruction they readily catch on what is wanted, and by giving their undivided attention they will need but little watching to keep them from putting down cuts in the wrong column, or to the wrong section. While it's a fact that many mistakes are laid to a clerk, he does not have to stand the responsibility, but an association should see to it that a suitable one be furnished a judge, so that he may

R. C. BUFF ORPINGTON.

First prize cockerel at World's Fair, St. Louis. Owned by J. M. Williams & Co., North Adams, Mich.

hold him responsible while performing this duty, then both be held responsible by the association. If you want a judge to "sweat blood" and feel like throwing up his job, just give him a few new clerks during the performance of his work. No doubt there will be some who read this will say "these fellows that associations hire to judge want things made too easy." This, however, is not the fact. Judging standard poultry is a mental process that requires concentration. No man can concentrate his mind and do his best work if he is expected to deliver a lecture with every fowl he scores. An association employs him to place the awards on the best specimens on exhibition. If he fails where conditions were favorable for accurate and intelligent work he proves himself incompetent and unworthy to be called again. His handling of every specimen must educate his memory so that he will be able to show why one specimen won over another when the awards are up, it's true some technical fault, sometimes when a card is added, place what appears to be an inferior specimen over a better looking one, when viewed without handling. But no man can to a certainty make awards or even reasonably dare criticize awards unless he has handled the specimens under consideration. If he does it's only a manifestation of egotism and an unworthy display of qualities undesirable in any man worthy the name of fancier. Poultry judging is a science and can only be brought to greater proficiency when associations aid in so systematizing their exhibits that the expert may work with all conditions made possible for good work.

EDITORIAL.

If American Reds, Rose Comb Rhode Island Reds and the same in Single Combs had to pay in spot cash for all the advertising they have received, and double rates for editorial notices, they would be a bankrupt institution! The action of the American Poultry Association at Pittsburg will be history by the time these lines are read, but a month will elapse before all poultry people know of the outcome.

English poultry clubs or specialty societies form their own standards for the varieties they champion and act entirely independent of any other breeders. Every breeder who is interested in his favorite is a member of his variety's club and thus has a voice in the making of the standard. There would be no more thought of working against a deeply in-

trenched club of this kind than there is in America of a new organization supplanting the A. P. A. The dues of the membership are light; in fact there are none at all and the standards of the variety or breed championed by a club are freely distributed. This plan commends itself to those who study it; it shows the principles of right clear through. The fancier of Houdans has a Leghorn or Brahma breeder legislating for him under this plan! He knows that if he does not attend the club meeting there will be plenty of Houdan men on hand to care for the breed. And as a result these club standards stand for years. We will sooner or later try the plan, and then delays of one fowl's standard will not be the cause of another's. Also a more perfect representation will result and this for the good of the industry.

* * *

The Sydney Daily Telegraph for February 4th reached us on March 11th. This paper brings monthly news of the Australian Laying Contest and says that the standing of the leading pens of six hens each are as follows up to and including the tenth month:

White Leghorns (Australian).....1050
Silver Wyandottes (Australian)....1040
White Leghorns (Australian).....1040
Black Orpingtons (Australian).... 996
R. C. W. Leghorns (American).... 988
R. C. B. Leghorns (American).... 974

The American White Rocks, White Wyandottes and Rhode Island Reds are on down the list, standing well towards the top. There are but the months of February and March yet to hear from and the evidence so far is that we cannot hold better places than our American fowls now have. The change of climate nearly upsets our birds in the molting, as they go through two of them during the year in which the change takes place. There are many things being said of the American Rose Comb Brown Leghorns bred in Australia from the early importations. The fourth annual contest begins April first, this year, and some few pens of Australian bred American strains will be entered. This fourth contest will decide, to a great extent, the value of our strains, as the fanciers of that country who are entering the offspring of American bred birds in it know how to get best results from good fowls. We shall keep a closer watch than ever upon the contest starting April first. As yet there are no American fowls entered.

* * *

So many tales about poultry keeping are told that we cannot begin to believe them all. Poultry, our English contemporary, says that General Stocsel's pet game cock was killed by a shell from the guns of the sturdy Japs. The reader who applies a bit of common sense to the story would not suppose that the General had any spare moments in Port Arthur to admire game cocks.

* * *

We should all be interested in the building up of old varieties, especially when those varieties are worthy. And along these lines Mr. E. G. Wyckoff should be encouraged. Recently he has gone to much expense and trouble to import some extra choice specimens of Black and Pyle Leghorns, two varieties very nearly extinct in this country though bred somewhat some years ago. There will be a revival of these handsome fowls now. It must be so when so good a fancier as Mr. Wyckoff sets hands to them.

Mr. Wyckoff has been a good addition to the ranks of Leghorn fanciers as he has put much good business sense into their breeding and pushing. He has also done his share and more to bring all the merits of the Partridge and Silver Pencilled Dottes to the high state of perfection and popularity they now enjoy.

* * *

The League of New England Poultry Associations is now a babe with a name. There has been a movement on foot in the West for six months or more to make a circuit of the Missouri, Iowa, Nebraska, Kansas and Colorado shows, but as far as getting them under one form of management is concerned this has been thought too gigantic to handle—and it is. South Dakota and Minnesota might be included in this western circuit. It could begin with Missouri, then Kansas, Iowa, Minnesota, Nebraska, Colorado and lastly South Dakota.

* * *

Mr. Howard Gould has invested nearly \$10,000 in the building of a pheasantry at Port Washington, in the state of New York. Fanciers who know of this man's plant say he is one of the best fanciers they know of. He is putting money into the breeding of good poultry, but takes especial pride in his pheasants. We welcome him to our ranks, indeed, and shall be glad to say a few things about his exhibits when they appear.

* * *

A poultry fancier at Petaluma, California, has planned and is building a farm that will support 12,000 laying hens the year round. Three men will be required to care for the poultry. Alfalfa will be used largely for green food and the base of mash feeds. This man, Mr. George L. Russell, expects to make a profit of \$1.50 per hen on the entire flock. To us in the East who think 1,000 hens are more than one man can care for, this looks like a big undertaking, but out there where things are done on a mammoth scale, we may expect great things.

* * *

The latest report is that Billy McNiel, of Canada, who has headed nearly every delegation of Canadians that ever came over to our shows and took home a sack full of the money, is leaving the ranks for good. At St. Louis his winnings amounted to fourteen hundred dollars! Who ever saw Billy with a poor bird in his string? Who ever saw him without a cheerful word for every one around? And we will all miss him.

* * *

We frequently have letters sent us containing questions to be answered, or articles to be published, or comments on different subjects of general interest in the poultry yard that come unsigned. To all these correspondents we would say that all communications of this nature should bear the name and address of the writer, not necessarily for publication, but as an evidence of good faith. When the communication appears in print the name and address can be eliminated if desired by the writers.

Thos. F. Rigg, Associate Editor of AMERICAN POULTRY JOURNAL, will be in attendance next season at the New York, Boston and Chicago shows, and will report these events in the columns of AMERICAN POULTRY JOURNAL for the benefit of its readers.

HATCHING CHICKENS WITH HENS.

Spring time is again at hand and the cluck of the hen is heard once more in the farmyard. This is the month the farmer should begin to set his hens, in order to get early pullets for winter layers. But how many will keep putting it off, because it is such a disagreeable job fussing with a contrary old setting hen, or because they are too busy with other work until it is so late that what few chicks are hatched at all will not begin to lay before the next spring. How often we hear people remark when speaking about setting hens, "That the pesky old hens are more bother than they are worth."

They can't get them to set, or if one does happen to set she will leave the nest before the eggs are hatched. They seem to think the hen is all to blame, when in fact they are to blame themselves, for if they would take time to look at their hens they would in nine times out of ten find them covered with lice and a lousy hen never makes a success at hatching. She will either break half of the eggs, or desert her nest most every time. Of course as we all know the best way to hatch chickens is with an incubator, if you have one, but if you haven't you will have to fall back on the old hen. Now it isn't such hard work taking care of setting hens as some people think it is. We have raised from 100 to 300 chicks every year for eight years or more, all hatched with hens and I have never found it very hard work. Of course it takes time, but where is there any work on the farm that doesn't take time? The most important part is to have good hens. The Wyandotts, or Plymouth Rocks are the best as they are not so big and clumsy as the Brahmas and Cochins, although in some cases the latter make good hatches. The common barnyard fowl are as a rule pretty good setters, but the small breeds, such as Leghorns, Minorcas, etc., cannot be depended on. Get your hens to laying in the fall before cold weather sets in and keep them at it all winter. About the middle of February begin to increase their feed, so as to get them fat and you will have all the setting hens you want by the first of April. Where it is possible I have found it a good plan to keep two separate pens of fowls. In one place, the best females of the flock mated to a

good vigorous male bird. This pen is to furnish eggs for hatching. The other need not have any male bird as the eggs will be just as good for market and the hens will set better without him. When a hen becomes broody she should be left on the nest a day or two to be sure she means business. If she is still inclined to set she should be carefully placed in a good nest, in which has been placed some glass nest eggs.

After dark is the best time to do this so as not to frighten her. She should be left alone for a day or so until she gets used to her new quarters, then she can be given the eggs for her to hatch. Both hen and nest should be given a good dusting with lice powder which should be repeated once a week until the chicks are hatched. She should be supplied with a good dusting place, and plenty of corn and grit, also a dish of fresh water. If the hen does not have access to the yard a sod of green grass is quite a treat to her. It is also a good plan where the hen is confined to sprinkle the eggs with slightly warmed water occasionally during the last week. When several hens are to be set a room in the barn is a good place to set them as they will be out of the way of the rest of the flock, and where you can take care of them all at once if you wish. I find a common bushel potato crate makes a good nest for them with another one placed on top of it. The hen can be confined until the feeding hour when she can be lifted off to eat. She will most always go back herself, but if she don't, she can be caught and placed upon the nest. Several hens can be let off at the same time and the work done quicker, although you should always look to see if they all go back. Once a day is all that is necessary to feed them. After the warm weather begins, hens can be set more satisfactorily out of doors. They should be placed in a good sheltered nest with a lath or wire run for them to exercise in. When this method is used all the care they need is to keep water and feed before them.

Ashtabula, O.

A. R. BELKNAP.

According to the claims of cold storage men, brown-shelled eggs keep better than white-shelled ones, as they are heavier and thicker.

RANKINS ROYALS

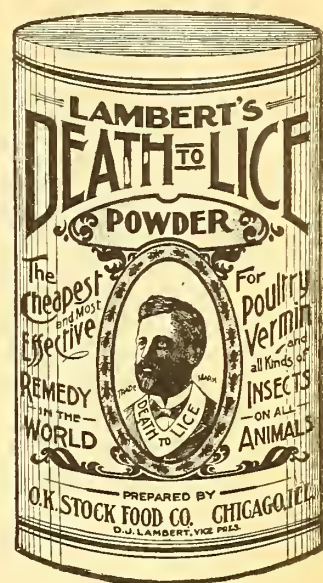

OR AMERICA'S BIG FOUR

from Rankin's Royal Rocks and White Wyandottes. Send for new illustrated catalogue with mating list for 1905. It is free.

H. P. RANKIN

Box 61, Hartington, Neb.

The Best Chickens

are never raised in lousy, filthy quarters, but are those that are kept clean, comfortable and free from vermin. This is why they are the best. Good feed and good care with plenty of Death to Lice will not make show birds out of ordinary stock, but poor feed and poor care, with no remedy for lice, will make culls of the finest stock in the land. This is the reason we use and sell so much Death to Lice.

The Best Time

to look for lice is when you think of it. You should think of it when you read this advertisement. The best time to fight lice is as soon as you have the right remedy. If you have small chickens, go this evening with a lantern and examine their heads. If you see nothing wrong, moisten the end of your finger with kerosene, apply to the top of their heads, and see if any lice back out of their hiding places. Death to Lice Ointment will kill them in their tracks.

The Best Way

to find lice on hens or large chickens is to examine among their fluffy feathers around the thighs and beneath the vent. Death to Lice Powder sprinkled here is all that is needed to destroy these ticklers. Spider lice or mites hide in cracks and crevices around the roosts and nests during the day, crawl out upon the hens and chickens during the night, and feast upon their blood, so that they are red instead of gray in the morning. You can smell these nasty little fellows when they swarm in large numbers, or can find them by looking under and around the ends of the roosts. We have a "Special" for dissolving in kerosene or whitewash that will fix them, or a "Liquid" prepared for painting or spraying inside of the hen-house.

The Best Remedies

to use are those that are known to be harmless to the birds and sure death to the insects. A whole lot of chickens are killed every year by improper remedies. The best is the cheapest every time. One nice chicken saved will pay for a season's supply of Death to Lice. I have been making, using and selling lice-killers for more than twenty years. I know that I am now sending out better goods than ever before. I am giving my customers the benefit of a life-long experience at poultry-keeping with every box of Death to Lice that they buy.

The Best Thing

for you to do now is to look for lice; in your hen-house, on your hens and chicks. If you do not see any at first, look again. When you do find the lice, write and tell me where, and I will advise you what to do to get rid of them. If you want a remedy at once, send me any sum from 10c to \$1.00, according to the size of your flock, and I will send you what you need. If you send \$3.00 I will send you a case at wholesale rates from nearest jobber. Money back if not satisfactory in every way.

Chicago

SPRING WORK.

As spring approaches there is much work to be done in and about the poultry yards. With us March is the cleaning-up month; houses and yards are given a thorough overhauling and everything put in first-class condition. We aim to keep them in first-class condition at all times but during the winter some things are apt to be overlooked and some cannot be attended to as well as in warm weather, consequently a general overhauling is needed.

Our poultry house floors are of earth and our first work, after removing perches and nests, is to remove several inches of soil and replace it with sand or dry earth, topped with gravel. Then the perches and dropping boards are thoroughly cleaned and oiled, the nests renovated and the houses whitewashed inside and out. The nests are built along the back and sides of the scratching shed which takes up the space between the two houses. The shed is closed at the rear and open in front except in inclement weather when it is closed by a canvas curtain. I do not like the idea of placing the nests beneath the dropping board. Placed in the open shed they are more accessible and therefore it requires less work to look after them. In colony houses where there is a passageway from end to end the plan of building the nests in the passageway with entrance from the pen, is excellent. The nests are provided with a hinged top so the eggs may be reached without entering the pen.

The yards are raked off, all rubbish burned and the ground plowed up, then

lightly rolled. The yards being also an orchard, both poultry and trees are benefited. Provided the soil is well drained an orchard is the best location for a poultry yard. It affords shade during the hot weather and also provides much food in the form of insects and grubs.

One of the most important duties is preparing for the numerous broods of chicks which begin to arrive about the middle of March. For the setting hens we provide roomy nests where the hens may be confined for a few days and will not be disturbed by other fowls. It is well to try a hen with china eggs and if she is all right give her the eggs, preferably at night, without removing her from the nest. Dust hen and nest with insect powder whether you find any lice or not; prevention is the best policy.

Coops must be constructed for the chicks and if they are to be placed outside they should have a board bottom which can be removed and cleaned daily. It will not do to allow the chicks to run about in the early morning while the ground is damp; they are almost certain to be affected with gapes. The best method is to have a small run attached to each coop and confine the chicks to it. Early hatched chicks are best. They are fully developed when cold weather sets in and begin to lay in October or November, while late hatched chicks will usually not begin laying until February.

It is no easy task to care for a dozen or more broods of chicks and keeps us "hustling" continually. Fresh water must be provided freely, coops cleaned and the chicks fed several times a day. The first few days we feed bread crumbs

soaked in milk; millet seed and oatmeal. The second week the chicks are given ground grain of various kinds and as they grow older their diet is changed to cracked corn, wheat, table scraps, etc. It requires lots of time, labor and patience to look after a large lot of chicks; and these combined with a thorough knowledge of the needs of your fowls makes success reasonably certain.

NATHANIEL G. SAXTON.

Camp Dennison, Ohio.

CORRECTION.

In our report of Boston show in the March issue, the first prize pen of Columbian Wyandottes was credited to W. B. Richardson. This prize was won by R. G. Richardson, Dracutt, Mass.

Edward W. Staebler, of 36 Tremont street, Cleveland, Ohio, would like to have Dr. Chas. M. Atkinson, of Illinois, furnish his address, as this was not included in the communication he sent him.

In our report of Madison Square Garden Show in February issue, the fourth prize on S. C. White Leghorn cock should have been credited to H. J. Blanchard, Groton, N. Y., this being an error in the official catalogue.

Sweet potatoes, being sugary, are fattening.

Special Machines For Special Purposes

In addition to the regular *Prairie State Incubators* we make special machines for special purposes; for ducks, geese, etc. Herein we illustrate the *Prairie State Special No. 288 Duck Machine*, built to meet the requirements

of those who raise ducks exclusively or on a large scale, and want a machine that is reliable. The same approved general principles of construction employed in our regular

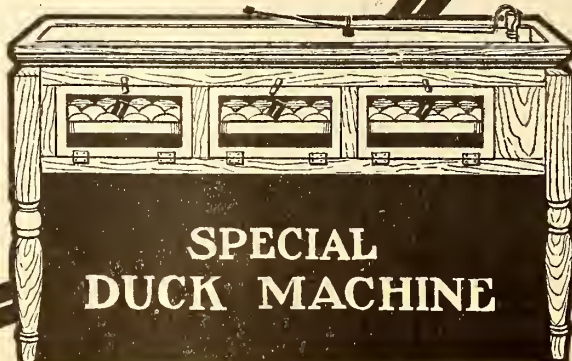

Prairie State Incubator

have been followed with slight modifications, especially in the matter of ventilation, to meet the requirements of duck eggs. The egg tray and egg chamber are deeper than in the regular hen-egg machines, and there is more room in the nursery. Has capacity for 288 duck eggs. May also

be used for hen eggs, with a capacity of 400 eggs.

The specialist will find our special machines for special purposes "just right." Write for illustrated catalogue describing our full line of machines and supplies. *Prairie State Incubator* is winner of 385 first prizes.

Prairie State Incubator Co.
Box 468, Homer City,
Pa.

**SPECIAL
DUCK MACHINE**

ARTIFICIAL HATCHING AND REARING OF DUCKS.

In hatching ducks artificially the incubator is operated about the same with duck eggs as with hen eggs. One hundred and three degrees is considered to be the proper temperature, but better allow the incubator to be a little under that degree than over it. They need a little more air than do the hen eggs in order that they may be dried down enough because of the shell being so thick and tough.

The air space will be a little larger on the fifteenth day than in the hen eggs, but as they begin to pip, they require a trifle more moisture. The eggs should be tested on the fourth and fifteenth days of incubation and be sure to place the thermometer between two fertile eggs. Better remove all unfertile eggs at the last test for they are liable to explode and bring serious trouble to both machine and attendant.

Duck eggs require a week longer to hatch than hen eggs and the young ducklings will break the shell thirty-six to forty-eight hours before they are ready to come out. A chick seldom amounts to anything if helped from the shell, but the duck is just the opposite; he will apparently thrive just as well when helped out of the shell as if he was left to help himself. In order to help a duckling from the shell, remove the top part of the shell and he will get out the rest of the way alone.

If he should happen to bleed leave him alone until he has absorbed the blood and never give any help unless you are positively sure he is unable to do so himself. Ducks require about the same amount of heat as chicks. Start the brooders the same as you would for chicks and lower the temperature to 90 degrees at the end of the first week, 87 degrees at the end of the second and all the way from 80 to 85 degrees at the end of the third week.

They may be removed and put into a cold house (i. e., one without artificial heat) at the end of the sixth week. This

CHAS. F. THOMPSON & CO.
LYNNFIELD CENTER, MASS.

See ad on page 368.

may be made the same as a larger brooder house without any heat. They may be fed about the same as chicks, only more in the bulk; the first feed the first three days, may be composed of one part hard boiled eggs (unfertile eggs) and three parts bread, and after that equal parts wheat bran, corn meal and potatoes (boiled) with a little ground meat or scraps added at first. This food should be fed a little softer than for chicks and water should be handy so that the ducklings may take a drink with each mouthful; if not they are liable to choke, but do not allow them enough to swim in until they are feathered out (on the breast at least).

Milk should never be given to ducklings because they have a way of sticking themselves up with it. Ducklings should never be fed largely on corn meal because it is apt to cripple them in the legs.

Ducklings are usually marketed when about nine weeks old and at this age should dress from eight to ten pounds per pair. The time to dress ducklings is when they are partly feathered out. Do not allow the second crop of feathers to start, for it will not only cause delay in picking, but also reduce them in flesh.

MILO D. HAYNES.

Lisbon, N. Y.

LITTLE CHICKENS: THEIR CARE AND FEED.

When hatching day is drawing near do not be in too great a hurry to count the chicks. Let nature attend to the hatching process without interference. After the chicks are hatched 24 hours give them their first meal, which consists of rolled oats. I continue feeding this for about 2 months, giving them well baked Johnny cake for a change. The formula which has given me good results is as follows: 2 quarts bran, 2 quarts coarse cornmeal, 1 quart wheat middlings, 1 handful beef scraps, 1 handful of chick grit. I mix this up well with skim milk. Then I rub it into a crumbly mass, and then bake it for about 4 3/4 hours in a slow oven. Then I slowly begin to feed them cracked corn, increasing it as they get used

to it. I never feed them soft feed as it causes bowel trouble.

For coops I take barrels, putting tarred felt on the top to keep out the rain. I tie a long rope on the right foot of the cluck so that she can get away from the coop the distance I desire her to. After the chicks are 3 weeks old I separate those that I want for broilers from the rest and feed them a forcing food. When they get to weigh 2 pounds I sell them. A very important thing to remember is to get rid of the lice. Every 2 weeks I grease the chick's head with some heated lard. For a change I give them lettuce or some other green food. I never neglect to feed them at feeding time. When I go out to feed them they are all assembled at the gate waiting for me. I have my chicks very tame so that I can pick up any one of them and they will not struggle to get loose.

I think that every poultryman ought to keep this saying, "Cleanliness is next to godliness." I clean my coops out every morning, for if the droppings stay in, it makes it very damp and filthy which causes roup and other diseases. Be careful of the cat. I have lost many chickens that were killed by the cats. Do not trust her, for I think the cat is the chickens' greatest enemy.

Fullersburg, Ill. CHAS. H. WAGENER.

Editor Drevencstedt says that when diarrhoea is first discovered, in the majority of cases boiled rice and milk will effect a cure. But where stubborn or neglected cases are met with, no quicker, safer or better remedy than the Sun cholera mixture exists. This famous remedy can be procured at any drug store, whether in liquid or tablet form, full directions usually accompanying each bottle or box. One tablet in the morning and one in the evening is usually efficient. Ground nutmeg is another simple and powerful remedy, but the after effects are not always as satisfactory as with the Sun cholera mixture.

PRIZE WINNING
SINGLE COMB
WHITE LEGHORNS

Exhibited at Madison Square Poultry Show, New York, and at the Coliseum, Chicago.

A GAIN we were prize winners at the 1905 Poultry Show in New York. At the Coliseum, Chicago, we were remarkably successful. On eight birds we won the following prizes in the hottest competition ever seen in the West: 1st and 5th Cock; 1st and 4th Cockerel; 2d and 5th Hen; First Pen. Special for best Cock; Special for best Cockerels. All of our prize winners were from our own stock. We shall have eggs for hatching for sale from these prize winning matings. If you wish to breed prize winning stock, correspond with us at once, and get prices of eggs for hatching from these special pens. These winnings should convince you that we have "quality."

Eggs from special mated pens of heavy egg producing strain, \$2 per 15; \$5 per 45; \$8 per 100; \$70 per 1000.

CHOICE BREEDING COCKERELS

We have for sale about 200 extra choice breeding Cockerels at very reasonable prices. These birds have particularly fine plumage, carriage and head points. Their ancestors for generations have won prizes in all the shows in the United States. On request we will mate up for the purchaser, trios or pens, which will produce the very best results. Ask for list of special matings. A postal card request is enough. If you need birds for breeding or eggs for hatching, write us at once for description and prices.

WHITE LEGHORN POULTRY YARDS CO.,

Box 525,

WATERVILLE, N. Y.

A BROWN LEGHORN MATTER.

On page 163 of February issue of the AMERICAN POULTRY JOURNAL under head of "What Wm. Ellery Bright is doing" appears a notice of the sale of Bright's 1st prize St. Louis Brown Leghorn Pullet, at \$100 and further it is inferred that she went to "old and well-known breeders, which not only pleased them but has won prizes for them."

Now the winning of prizes may mean anything from first to say sixth or seventh prize and it may interest Mr. Bright and others to learn just what place or prize this pullet won after leaving his hauds.

The first prize St. Louis pullet was bought by a Mr. Gable from Mr. Bright and later bought from Gable by Exmoor Farms, Lebanon, Pa.

This first prize St. Louis pullet was shown by Exmoor Farms at the Madison Square Garden Show under my name, and Exmoor Farm's seventh St. Louis Pullet was shown at the same time under the name of a Mr. Strunk.

Mr. Strunk won first with our 7th

CHAS. F. THOMPSON & CO.
LYNNFIELD CENTER, MASS.

See ad on page 368.

St. Louis Pullet, while Bright's 1st St. Louis Pullet was placed 4th.

In the November *Reliable Poultry Journal*, Judge Burgott said, in his report on classes judged at St. Louis that the 1st prize St. Louis Brown Leghorn pullet was "the finest he ever laid his hands on."

This being true is it not reasonable to assume that our seventh St. Louis pullet which in New York won first defeating Bright's 1st St. Louis pullet by three places, must be the best pullet that Judge Burgott ever laid his hands and feet on (feet at St. Louis, hands at N. Y.) He should know as he judged Leghorns at both shows.

These are facts, weigh them and remember that both the 1st prize St. Louis pullet and the 1st prize N. Y. Pullet are now at Exmoor Farms, both of them being the finest pullets ever raised—only one is the finer by three points.

C. A. DUTTON,

Supt. Exmoor Farms, Lebanon, Pa.

EDITOR AMERICAN POULTRY JOURNAL:

Some one has discovered a great repetition between the old and new poultry papers. In this little world of ours everything repeats itself the same old way. But always new to the greater number today we are in need of advice. We turn to a recent number of our

poultry journal and we find the very thing we need. Would it be easier to go to the garret to a pile of old dusty papers? I should feel as though the bottom had fallen out of something if I was not expecting my bright, clean poultry paper every month. And now I am hoping to have a little talk with the friends of the journal. It is the small producers that ought to talk one with another. The scientific poultry men do not need these talks. Probably this will be the same old story. My point of view all comes on the Light Brahma and Pekin duck line, and I hope to learn much more on these two lines. My strong convictions are to keep to one breed of fowls. Select the one you really like the best. Then believe you have the best on earth, and each year try to go one better on your flock. Get acquainted with your chickens; learn their talk, and soon they will understand your language; never let them be afraid of you. Much is written on the value of bran as an egg producer. I am not much in love with soft food for the chickens, and if slow eating is to be desired you cannot have it in a meal of hot mash. I cannot feed it to my flock in any generous amount without having bowel trouble to contend with. And my pullets and cockerels will not stand it at all. I use one part bran, one of oats and one of unbolted corn meal. I have very good results. But my laying pullets do best on oats, cracked corn and a supper of shelled corn. They have ground bone, and screenings to scratch for, and some skimmed milk. My pullets will stand a much richer and fuller diet than the old hen. I heard a man talk at a mid-winter fair: "He said I feed to my flock equivalent to one teaspoonful of mixed grain in the morning; a tablespoonful of hot mash at noon, and a tablespoonful of shelled corn at night." My flock would look sideways at me on such a diet. A hen that is too fat won't lay. Neither will a lean, hungry one. It is the hen with a good appetite and a fairly full crop that fills the egg basket. Do we all understand that young chickens and ducks that have a good range need less care than those that are kept in close quarters. For the first few days I give bread and milk, rather dry, then rolled oats, dry, between the bread and milk feed. Soon I give a little cracked corn. Now and then I give a little of some kind of breakfast foods; it makes them happy. They get their own grit and meat diet and balance their own rations. Young chickens and ducks must be kept from roaming in the early morning till the grass is dry. I save the lawn cut grass—by drying quickly in the shade and packing in barrels. It keeps very good. In the winter I steep it and put it in the hot mash. I cannot tell its real value as food, but my hens eat it readily, and it has good filling up value. I see the microbes must move along to make room for the little fellow that has hit the angleworm. That is causing gapes in chickendom. Long ago I read to put so many drops of turpentine on a board, cover with a tight box, and put the chicken under. We did. At the regulation time we lifted the box. That chicken was cured of gapes, had gone where the "Woodbine Twineth" and no chicken has dared to gape on this ranch

Heaves, coughs, colds, quickly cured. **Pratts Heave Cure.**

since. I have a piece of ground rich in worms. It was once an old graper. I delight to turn over the soil just to see my hens stuff themselves. Prove all things. Can the AMERICAN POULTRY JOURNAL tell how many women in this state has the full charge of poultry plants? It is a work they can do very well. Emerson says, "Genius is an enlarged capacity for work." That is what the poultry work calls for. A woman can't do that and be a member of the home club that runs around the neighborhood with shawls over their heads. Are there any women judges of poultry? Why not? With a few years study they could throw the glove right down to the masculine judges. Let some of our bright young women take up the work.

Yours for an up-to-date poultry journal,
Mrs. O. H. MACK.

Brodhead, Wis.

Editor AMERICAN POULTRY JOURNAL:
Dear Sir:—I notice in the March number of the AMERICAN POULTRY JOURNAL an article by Dr. O. G. Crawshaw, entitled "The care of the Fowl," to whom I would like to make a few remarks and ask a few questions through your journal. Nearly all poultrymen are, I think, convinced that it pays to give good care and attention to their fowl and also that the best results can not be obtained without a reasonable amount of time being spent in cleaning, regular feeding, watering etc., but I question if from point of profit, it is not possible to overdo the thing and whether all this extra fussiness (pardon the word) is at all necessary or desirable. I take five poultry papers and read them all, but I think giving fowls warm water twelve times a day is the limit of anything I have read or heard of so far. I would like to ask the doctor to give us more light on the subject of his poultry keeping, and would ask whether he is in it for pleasure or profit? If the latter, would he kindly inform us how many fowls one man can take care of and feed them six times a day and water from six to twelve times? Would not

his time be better employed in doing something else, say in keeping more hens, than in spending the greater part of his time hauging around the hen houses with a feed dish in one hand and a pail of warm water in the other? I think some people carry this matter of feeding and watering to the extreme and I do not believe it is any more necessary to feed a hen five or six times a day than it is for us to eat that number of times, in point of fact

Barred Rock pullet in first prize pen, Hartford, Conn. Owned by Chapman & McQuillande, West Hartford, Conn.

a man can't do all that and do anything else, he is tied hand and foot to the grain house and the hot water kettle. Personally I feed my hens but twice a day although I think three times is all right. I feed no wet mash at all, give grains in litter at between seven and eight o'clock in the morning and between three and four in the afternoon, and although I have followed this system, if such it might be called, for two years, I have not yet seen any valid reasons for changing to a more elaborate

method. I give water but twice a day and not warm at that and have no plastered houses, nothing but single board and shingled houses, yet my flock of seventy S. C. R. I. Reds have averaged better than forty per cent. Have been doing so since last November and are doing it today. I question, can a man who pampers his stock, keeps them in warm quarters, gives warm water and all that sort of thing have healthy, hardy stock to breed from?

One other thing which the doctor mentions which I would like to inquire into, is what he means in speaking of mixing the daily mash by using some good Poultry Food? Are we to understand that he uses some of these prepared foods which are sold on the market for the purpose of forcing fowls to lay?

I notice also in the article where the doctor makes that remark about sailing to riches on flowery beds of ease, now I should almost think that a person who toils over fowls as apparently does the doctor would sooner or later greatly appreciate a flowery bed of ease, so to speak, even if his fowls haven't made him profit enough to afford one. I also think a poultryman needs to be on the jump, etc., and have no doubt ambition is a good thing, but misdirected ambition or jumping up and down in the same place never got a person ahead much yet. To sum it all up, isn't there other methods of taking care of fowls which will give as good results with less labor, less making a slave of oneself, less living in the henhouse, as I may say, than the method described, to which I have referred. Let's hear from the doctor and others. ALVIN L. DUDLEY.

Kendal Green, Mass.

Writing in the *Country Gentleman*, Prof. Samuel Cushman says: "It is useless to attempt to raise geese successfully if they are afraid of the attendant. They should be treated with kindness, and have full confidence in their keeper. A nervous, quick-tempered, excitable, rough person may keep them so disturbed that they cannot thrive.

A Record Unparalleled?

OUR FRONTISPIECE.

A Duston White Wyandotte Prize Winner, and How Mr. Duston was Induced to Adopt White Wyandottes.

The beautiful frontispiece in our journal this month is a reproduction of a Boston first-prize White Wyandotte winning male, bred and owned by Arthur G. Duston, of South Framingham, Mass. This class was judged by one of the most prominent breeders and judges of this variety in the East, and the bird was pronounced one of the most symmetrical and highly finished cockerels that had ever been shown.

Mr. Duston was one of the very first to appreciate the splendid qualities of the White Wyandotte. This breed was admitted to the standard in 1888, and for a short time had quite a boom. Owing to many difficulties surrounding the breeding of them, the interest in them lapsed.

In 1892, Mr. Duston having become interested in the practical side of the poultry industry, took up several varieties, among them the White Wyandotte, and without prejudice to any of the other varieties, and no predisposition toward the White Wyandotte, gave them a very careful trial on his place as layers and market stock.

During this time, he catered to the best trade in the city of Boston, and during the course of the trial not only became convinced that the White Wyandotte would lay more eggs than any of the American or Asiatic varieties, but that as broilers and roasters they proved the very choicest that he could produce, bringing him the highest market prices, and maturing in the shortest possible time. During the test with two pens, consisting of two hundred and twenty chickens, they reached an average of two pounds, some running considerably over this amount, at eight weeks.

As is usually the case with those who have a love for the beautiful, and once get into the breeding of stock for utility purposes, it was not long before he became interested in the fancy side, making several showings with more or less success, and later going into the strongest competition that could be shown in Boston and New York, winning there what was thought a great deal more than his share of the prizes.

Since that time, he has occupied the place at the very head and front of the White Wyandotte enthusiasts and breeders, continually with his pen and his persistent advertising helping to further the interests of the breed. As Judge Hewes said, "You have undoubtedly done more for the White Wyandotte than any other man, or perhaps five men, in America. I say this without flattery, for it is a fact."

He has shipped during the past years, and in fact, the past few months, birds to New Zealand, Australia, Buenos Ayres, Germany, with orders for stock and eggs from England, and stock to Yokohama. During the time in which he has been a specialist with the White Wyandottes, his birds have been in the winnings in all of the largest as well as the smaller shows throughout the United States.

No small number of the largest and

best breeders today owe their success in the show room and a successful business to the stock bought from him direct, or from others breeding his strain. We think we are justified in saying that this strain of White Wyandottes is one of the most famous throughout the land. During the summer of 1904, Mr. Duston left his small farm in Marlboro, where he started his poultry industry, and moved to Ashland, Mass. (with South Framingham post-office address), where he has located on a large farm, and not only intends to push the White Wyandotte even more persistently than in the past, but will have the added advantage of being with his birds, and personally seeing to the raising and care of them, whereas in Marlboro a portion of his time was devoted to other business. This, with his added interest in breeding thorough-bred Guernsey cows, and attending to the farming of his acres, will occupy his whole time.

He writes that he has done the most

DEATH OF MISS CROAD.

"CROAD.—March 8, at 10, Ambrose Place, Worthing, Maria Elizabeth, daughter of the late Captain George Henry Croad, 4th Light Dragoons, aged seventy-nine." This obituary notice will, we are sure, be perused with deep regret by every reader of *Poultry*. To the late Miss Croad, the Langshan fowl owed not only its prosperity, but its very existence, and during the many vicissitudes through which that excellent breed has passed it had not a more staunch supporter than the deceased lady. Miss Croad's connection with the Fancy commenced on February 14, 1872, when the first Langshan arrived at Major Croad's residence; but it was not until the death of Major Croad that she came prominently before the poultry world. The Langshan as a pure breed had been assailed, and Miss Croad commenced a gallant defense of the breed, advancing such proofs of its purity that

Attend To Your Renewal.

Many thousand subscriptions to the AMERICAN POULTRY JOURNAL expire this month, and we would ask as a favor that the matter be attended to at the very earliest date possible. Sometimes our subscribers wait to be personally notified by mail of the date of expiration. With such heavy work as falls upon our subscription department at this time of the year, it is impossible for us to write each one, so we would thank our patrons to attend to their renewals promptly without waiting for any special notification.

Subscription offers will be seen on various pages of the Journal. Send in two subscriptions at 50c each and we give your own FREE.

We cut off at date of expiration. The date on the wrapper of your paper will show to what time you are paid. "Mar. 05.," for instance, means that you are paid to March, 1905.

As the policy of the AMERICAN POULTRY JOURNAL is to have all subscriptions payable in advance, we would be pleased to hear from each one in good time, so that there may be no disappointment caused by being dropped from our list. Send your subscription AT ONCE.

American Poultry Journal Pub. Co.

successful business this year, and the most satisfactory with himself and customers, that he has ever done before, and looks forward to another year, with his increased facilities for caring for his stock and orders, to growing his business from \$15,000 a year to not less than \$20,000; and we believe that this volume is approached by very few specialists.

While the personality of the man has unquestionably had a good deal to do with his success, this could not have been obtained only by the White Wyandotte proving to have an unquestioned utility value; and White Wyandotte breeders believe if the breeders in the country but worked together to maintain the shape and weights the standard calls for, that it will for many years be what they claim, the most popular fowl in America.

Barley is fattening, and so is buckwheat.

defied contention, and clearly showing that the black Langshan, as had been asserted, was in no way allied to the black Cochin. Despite this, however, the breed met with opposition in several quarters, and for many years the original type was scarcely ever seen in a show pen, a bird that in scarcely any respect resembled the original fowl being bred and shown under the appellation of Langshan. And in late years it was Miss Croad's desire to bring these facts before the notice of fanciers. With this object she wrote "The Langshan Fowl," a work that ran through several editions; and it is pleasing to know that before her death she saw the breed for which she had done so much to popularize again coming rapidly to the fore, and the club which has lately been formed in its interests a success, and on the right road to a still greater one. —*Poultry*, London, Eng.

Overfat is a diseased condition.

WINNERS IN SUBSCRIPTION CONTEST.

Following are the names of our agents who won the principal prizes in our great contest which closed March 20:

PRIZE.

1—Wm. Weinrich, Illinois.....	285

-------------------	----

Great interest has been taken in this contest from beginning to end, and we congratulate the winners upon their success. We wish to heartily thank all for the interest they have taken in AMERICAN POULTRY JOURNAL and their good work for it. There are agents who did creditable work, but who did not procure quite enough subscriptions to win the big prizes, but all of them are entitled to the special premiums which we offered, and those whose names are not included in the above list are requested to make their selection from the premium list and let us know their choice of the articles to which their list of subscribers entitles them. We will then forward the premiums promptly. Should any agents prefer, instead of choosing premiums, to give free subscription to their friends, send in their names at the rate of one

name for every six subscriptions. Or if we do not hear from you within two weeks, we will advance your own subscription at the same rate. We would be pleased to have all our old agents continue taking subscriptions with the same commission, but kindly state in your letters that you are an old agent.

IMPORTANT ANNOUNCEMENT.

John M. Soutag, of St. Charles, Ill., proprietor of the Perpetual Hen Incubator Co. business, has sold the entire business, including all its rights, and good will, and agencies to Robt. N. Oliphant, of Trenton, N. J. This important sale has been perfected just as we were going to press and only in time to enable us to make this announcement.

The half page ad of the Perpetual Hen Incubator Co. on another page of this issue bears the old address of St. Charles, Ill., and for the next 30 days all inquiries, orders or letters sent to St. Charles will receive prompt and careful attention. In the meantime the business of manufacturing the Perpetual Hen Incubator and Brooders will be moved to Trenton, N. J.

Mr. Oliphant, the new owner, is a man of experience in incubator manufacturing, possessed of ample means, energetic and enterprising, and will still further enlarge and broaden the scope of this already successful business. Many of our readers have watched with interest the rise of Mr. Soutag and the success that has come to him through years of experience with poultry and hard work in the inventing and perfecting of his splendid machines that have proved so great a success in all parts of the country. Mr. Soutag now retires with the satisfaction of having well and faithfully performed his work, and on this splendid foundation Mr. Oliphant now takes the business, and will carry it on to still further success, enlarging and improving the business in every way that intelligent work, ample capital, persistent and liberal advertising will accomplish, and we welcome the new proprietor into the ranks of Incubator Manufacturers.

On pages 222 and 223 of the March issue appeared two groups of Wyandottes, belonging to "The Pines," Paducah, Ky. By an oversight we did not put the proper description below these halftones. The description under the cut on page 222 should have read 1—1st prize Silver Wyandotte cock, Chicago, 1905. 2—3d prize Silver Wyandotte cockerel, Chicago, 1905. 3—3d and 4th prize Silver Wyandotte hens, Chicago, 1905. 4—4th prize pullet, Chicago, 1905. 5—2d prize pullet, Chicago, 1905. 6—4th prize Silver Wyandotte cock, Chicago, 1905.

Under the one on page 223 should have read: 1—3d prize Golden Wyandotte cockerel, Chicago, 1905. 2—1st prize Golden Wyandotte pullet, Madison Square Garden, N. Y., 1904. 3—2d prize Golden Wyandotte hen, Chicago, 1905. 4—1st prize Golden Wyandotte cockerel, Madison Square Garden, N. Y., 1904.

E. A. Parks, Syracuse, N. Y., breeder of Partridge Wyandottes, is selling eggs from his World's Fair winners. Any of our readers who are looking for eggs or stock of this variety should correspond with him.

THE UP-TO-DATE BICYCLE.

The 1905 model bicycles, with coaster-brakes and puncture-proof tires, would have been considered miracles of mechanical achievement only a few decades ago, and yet they can be bought today for only a fraction of the prices then prevailing. The Mead Cycle Company, of Chicago, is offering the finest of this year's models at from \$10 to \$24, and the models of 1903 and 1904 at from \$7 to \$12. Their factory clearing sale is attracting much attention among wheelmen, and their special catalogue, which they mail free, is worthy of careful study.

The Millville Poultry Farm Co., of Millville, N. J., have sent for our inspection a copy of their mating list, and for completeness it would be hard to find its equal. This contains a complete description of mating yards, names of prize winners that head the yards, prices of eggs and every possible bit of information necessary to buyers when sending an order. On another page of this issue is a splendid illustration of the three first prize winners at St. Louis from the yards of the Millville Poultry Farm, including first Buff Plymouth Rock cockerel, first White Plymouth Rock cock and first White Wyandotte cockerel. These winnings, secured at the World's Fair, 1904, in such strong competition, is certainly a record to be proud of. With this record back of them buyers can feel perfectly free to send in an order to these people and with confidence of securing eggs that will breed true and develop into future prize winners.

Nate K. Cornwall, of Thamesville, Ont., Canada, has sent us one of his catalogues and mating lists and we cannot pass this by without a notice regarding its attractive features and clever wording. The contents of the catalogue describes Buff Leghornology and then proceeds to give a "cackle" about "Canada's Best." His announcement starts out with this heading, "The Object of This Cackle-ogue," which is, we believe to be as unique and original a heading as we have ever seen in a poultry catalogue. Following this are "Whispers and Winks from the Roost." The whole catalogue is beautifully printed and illustrated and he closes by saying "Honors, Like Chickens, Generally Come Home to Roost," showing an illustration of the home of "Canada's Best" S. C. Buff Leghorns, where he claims that more prize winning male birds are bred than on any other spot on the earth.

H. W. Buckbee, of Rockford, Ill., has sent us a copy of his 1905 Seed and Plant Guide. This is Mr. Buckbee's twenty-ninth year in the seed business and he has been a yearly visitor to readers of AMERICAN POULTRY JOURNAL for a great many years. There is nothing that so increases the interest in a poultry yard, improving its appearance and combining additional profit with poultry, as a judicious selection of seeds and plants, and we advise more of our readers to send to Mr. Buckbee for a copy of this catalogue and combine with their poultry business more of this attractive feature.

Any one interested in White Leghorns should write Mr. H. C. Hauser, 633 West Sixty-second street, Chicago. Mr. Hauser's birds are the stay-white kind that all prominent breeders are looking for. He guarantees all his eggs to be true to name and from the same stock he breeds from himself. No one should ask for anything better. Mr. Hauser's Star Poultry Farm is located near the beautiful city of La Porte, Ind., consisting of eighty acres, and the best adapted place for poultry in La Porte county. All his birds are scored and nothing is bred scoring below 92 points.

S. A. Hummel, of Freeport, Ill., has sent us his fourteenth annual circular, containing price list of eggs and his famous lice powder. Mr. Hummel is already well known to readers of AMERICAN POULTRY JOURNAL, and he is now well fixed to furnish shipments of eggs from twenty-seven varieties of fowls at reasonable prices. This circular is nicely illustrated with all the different breeds that he handles and should be in the hands of every reader of AMERICAN POULTRY JOURNAL.

We have secured from the secretary, Ross C. H. Hallock, St. Louis, Mo., the new catalogue of the National White Wyandotte Club for 1905. This, as usual, is a splendid example of good printed matter and illustrations, and an evidence of the progressiveness of White Wyandotte breeders.

A VISIT TO THE HEADQUARTERS AND HOME

Office of the Cyphers Incubator Co., Buffalo, N. Y., With a Description of its Branch Offices. A Record of Accomplishments in the Incubator Business. Description of a Record-breaking Month of 26 Working Days in the Factory of the Cyphers Incubator Co.—By the Editor.

There is something inspiring in the record of men who do things—big things, whether it be running a railroad system, leading a victorious army or building incubators. In the accomplishing of all great endeavors one is apt to overlook the industry, force of will power, ability to overcome obstacles and to hold together as a unit conflicting forces which are all vitally essential to accomplishing results. The finished products of man's brain and energy only are considered by the masses. Great men and great events apparently appear suddenly. The preliminary toil and foundation building of any great work, the thought and labor necessary to bring it to perfection, is usually a record in which the public has no interest until success comes. Then is when the lime-light is thrown strong. The men who are responsible for great successes stand in the glare of the light. Their sayings and doings are semi-public property. They stand as object lessons for others. Their record is an incentive to bring about the best efforts that go to build power and influence in any line of endeavor.

The prophets who predicted five years ago that the incubator business had reached its limit would be out of a job for future prophesying if they could follow your editor in his visit to the home plant of the Cyphers Incubator Co. in Buffalo.

The plant as it stands today is a realization of the plans of its founders, in its complete and well nigh perfect state. This might be considered by the officers of the company as false praise, for perfect as it seems, there are plans contemplated that when carried out will make today's efforts seem as only a beginning.

The controlling force of this immense establishment is Grant M. Curtis, president and manager. Mr. Curtis is a man who has accomplished results, a man of positive and forceful character, who is quick to see the vital points of any situation and work on a straight line to accomplish a purpose; a past master in the art of imparting to others his convictions and intuitions, and with ability to support his ideas with tongue or pen. He is ably assisted by Geo. E. Littlefield, secretary and superintendent of manufactures; Robert H. Essex, assistant secretary, and Geo. M. Stowe, treasurer, and a long list of heads of departments and branch office managers whose portraits appear on another page.

Mr. Curtis, the president, ascribes the success of the business to the faithful, loyal and intelligent work of the many persons that are required to carry on the work. It is interesting then to know the rule of action that he uses in the selection of helpers. Three important qualifications in his judgment are essential in the selection of the working force. First, reliability, which embraces honesty; second, loyalty; third, ability.

and their importance is considered in this order.

The business of the Cyphers Incubator Company is widely scattered, and it requires perfect system to keep daily in touch with everything that pertains to the business in the home office, the principal branches, and with the thousands of agents scattered all over the country. The main office and factory is located in Buffalo. Branch offices in New York City, Boston, Chicago, Kansas City and San Francisco. In New York City at 21-23 Barclay street, the Cyphers Incubator Company occupies a 32x120 corner store, with basement and sub-basement for storage and shipping. At 26-30 Union street, Boston, 5 stories and basement, using the entire building. At 310

trial branch office was opened in two small rooms in Boston, at No. 34 Merchants Row. More space was leased from time to time, until on November 1, 1904, the Boston Branch House was moved to 26-30 Union Street where it now occupies a five-story and basement building, with an attractive store running through from Union street to Friend.

In the autumn of 1900 the company bought out a small poultry-supply business in New York City and opened branch offices and a retail store at No. 8 Park Place. Two years later, on account of lack of room, this branch house was moved to 21-23 Barclay street, within two blocks of the postoffice, where it now occupies a large corner store, a double basement and sub-basement, with warehouse facilities unusual for so central a location.

December 1, 1900, small offices were leased on the sixth floor of the Como Building, 323, 325 Dearborn Street, Chicago, and a western branch opened. The company's Chicago Branch now occupies a five-story and basement building

THE CYPHERS INCUBATOR COMPANY TIN SHOP.

In this shop are made all the lamps and heaters used with the Cyphers Incubators, all the heaters used in their brooders, in addition to numerous other articles they sell, such as food hoppers, drinking fountains, etc., etc. There are twenty-five men working in this shop alone—one of the best equipped tin shops in the country—most of the work being done by machinery.

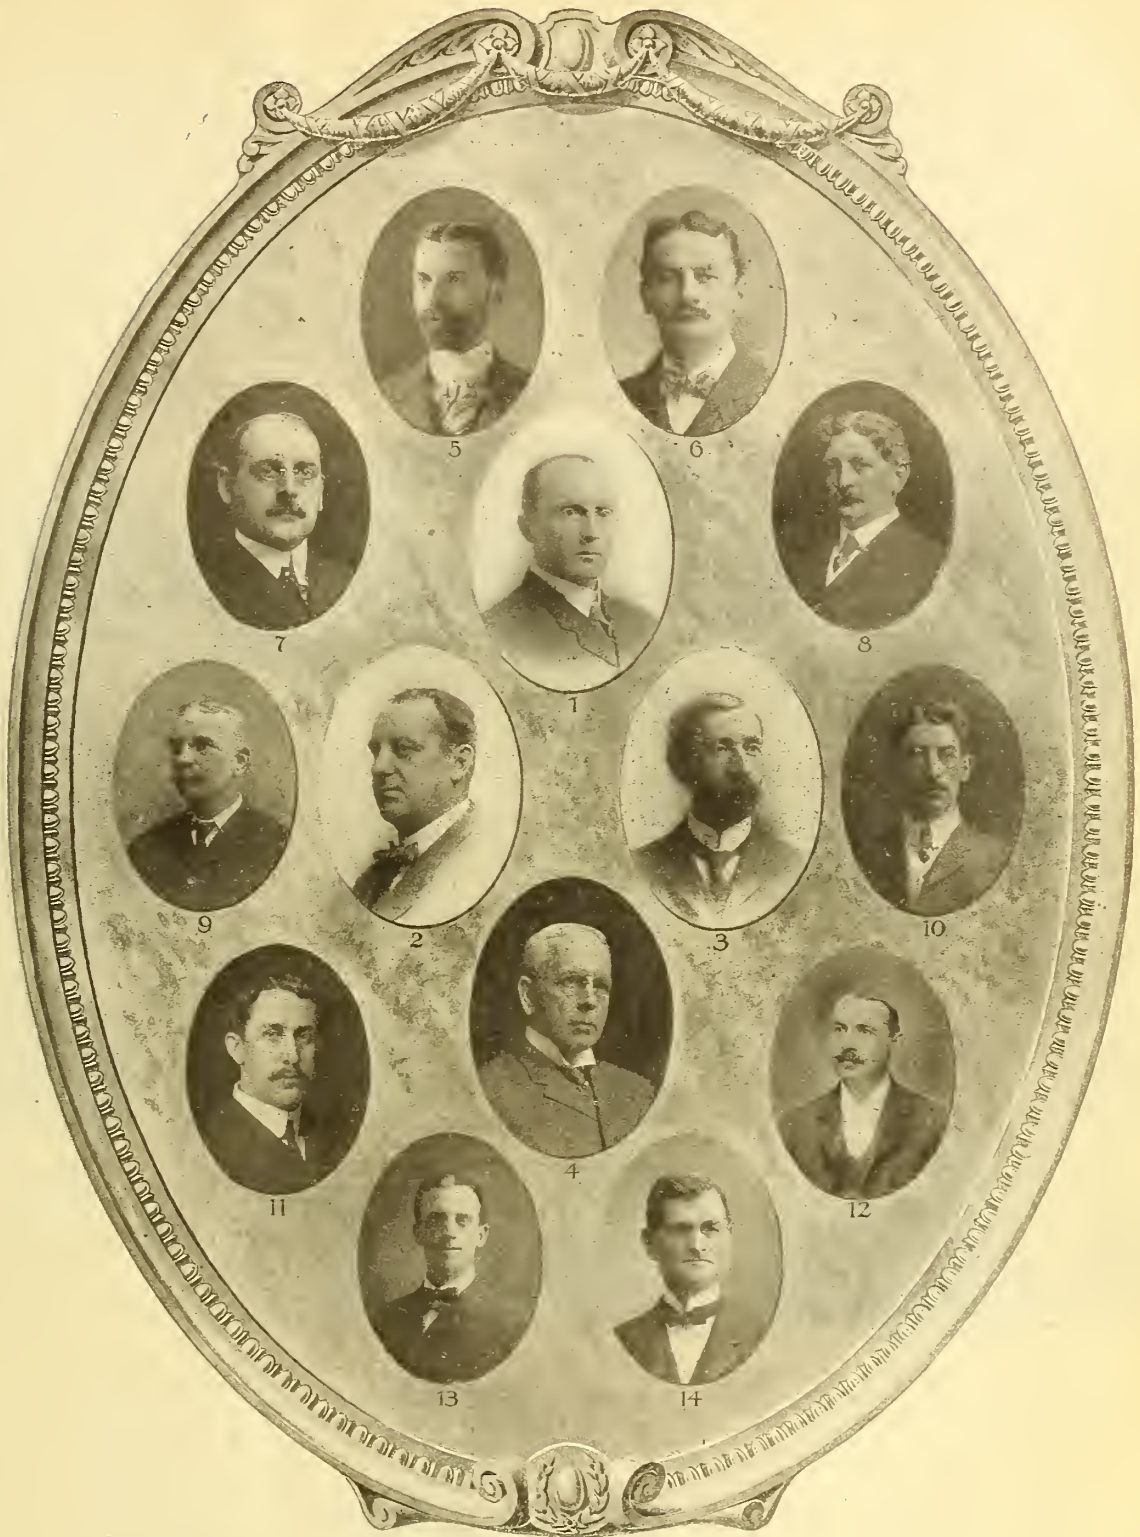

Fifth Ave., Chicago, a 26x120 ft. building, 5 stories and basement, using the entire building. At Kansas City 10,000 square feet of mill building devoted to branch business. At 329 Sansome street, San Francisco, a store floor 30x66 ft., basement 30x108, and second floor 30x66 ft. At each place, except Buffalo, they conduct regular retail stores.

During the five and a half years since May 1, 1899, the growth of the company's business has been gratifying indeed. On the date named the company had no branch houses and practically no agents. Late in the fall of 1899 a

at 310 Fifth Avenue, that city, with an attractive store and ample facilities for conducting the business of this branch under one roof.

October 1, 1904, in response to a rapidly-growing demand for the company's goods throughout Europe, especially in Great Britain and Ireland, European headquarters were opened in London, at 121-123 Finsbury Pavement, and a branch factory was established at Poole, Dorsetshire, England.

During February, 1903, No. 120 Church Street, Buffalo, a building 45x90 feet in dimensions and four stories in

CYPHERS COMPANY WORKERS.

1—Grant M. Curtis, President. 2—Geo. E. Littlefield, Secretary and Superintendent of Manufacturers. 3—Robt. H. Essex, Assistant Secretary, and Head of Publication Department. 4—Geo. M. Stowe, Treasurer. 5—C. A. Damon, Manager Chicago Branch. 6—F. H. Dillingham, Manager New York Branch. 7—W. W. Sullivan, Head of Wholesale and Agency Department. 8—J. B. Ludden, Head of Retail Department. 9—H. E. Moss, First Vice-President, and Manager Kansas City Branch. 10—W. A. True, Managing Director European Headquarters. 11—Dr. P. T. Woods, Chief of Cyphers Company Bureau of Information. 12—Randolph Meech, Second Vice-President, and Resident Manager Branch Factory, Poole, Dorsetshire, England. 13—W. E. Draper, Manager San Francisco Branch. 14—J. H. Curtiss, Manager Boston Branch.

height, was leased, and the Cyphers Company's Poultry Food and Clover Mill installed there. Within 18 months the business of the company in these lines had largely outgrown the capacity of this mill, and in October of last year a large milling plant, having 30,000 feet of floor space, and located on the Belt Line, at Kansas City, Mo., with unexcelled switching and shipping facilities, was leased for a long term of years. Here the company is now manufacturing poultry foods, clover and alfalfa products and conducting its Kansas City Branch House, where a complete stock of goods is carried, to supply on short notice the retail trade tributary to this latest western metropolis.

December 1, 1904, branch offices and a retail store were opened at 329 Sansome St., San Francisco, California,

the principal trade centers of nearly every foreign country on the globe where poultry is raised for market. Catalogues descriptive of the Cyphers Incubator Company's line of manufactures are now published in seven different languages.

The doubling and quadrupling of the company's business from year to year, since 1899, has called for a continual increase of factory and warehouse space. At Wayland, May 1, 1899, this company occupied about twenty-one thousand feet of floor space. At the present time its Buffalo factory, mill and warehouse comprise 143,200 square feet of space, while the grand total of space occupied in Buffalo, at the six branches and in the branch factory at Poole, England, exceeds 304,000 square feet—more than fourteen times the space occupied when the present company was organized and first incorporated.

During our visit to the Buffalo offices we had an opportunity to inspect the factory, and from personal inspection still further confirm our idea of the magnitude and importance of the great plant. The following statement of business from Feb. 14 to March 17, 1905, consisting of 26 working days, done by this company, is certainly a great record. During this time there were manufactured 3,258 incubators, and 2,652 brooders, besides thousands of other appliances that go to suit the needs of the users of incubators and brooders. This record will show that one incubator was turned out every 4 and 4-5 minutes, or an average of 126 complete machines during each ten-hour work day. The record day for February was 146 incubators in ten hours. The daily output of brooders is now 102 per ten hours or a complete brooder every 5 and 4-5 minutes.

The work can be followed in all its details from the lumber and dry kilns through every stage and process of the manufacture of these articles. The work is carried on in a systematic manner on every floor and in every room, every inch of space utilized, until the finished product arrives at the shipping room. There are three dry kilns with a capacity of from 35,000 to 50,000 feet each, equaling 120,000 feet every four or five days.

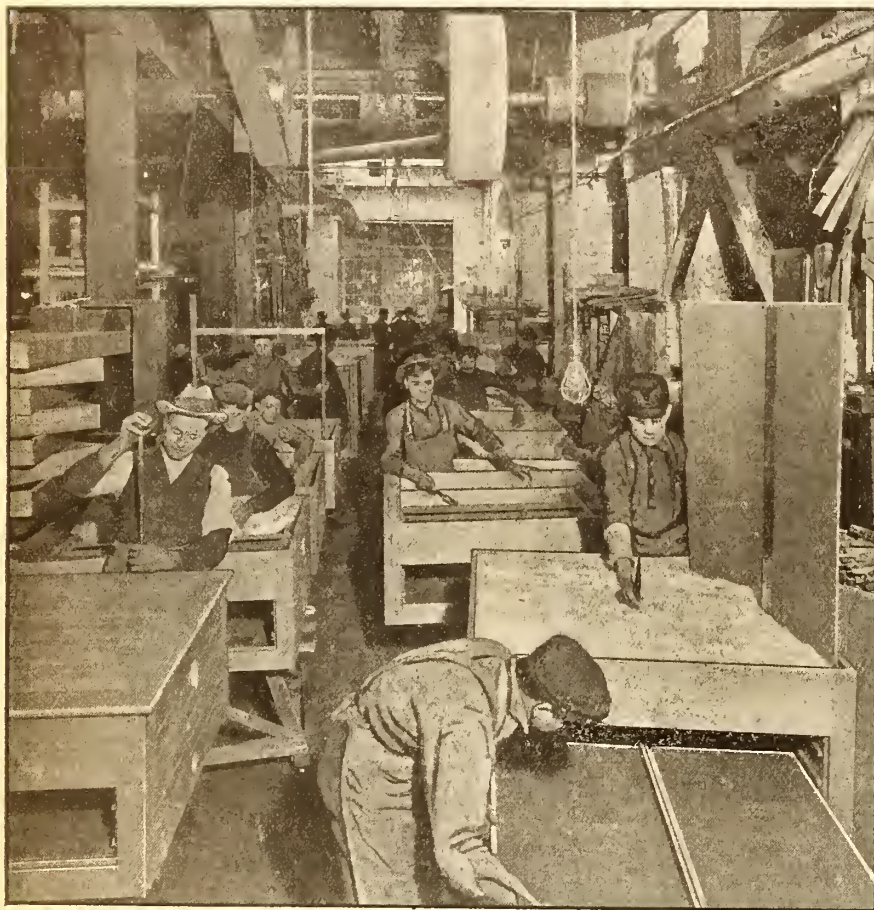

During these 26 working days were manufactured 11,821 separate and complete articles, including self feeders, drinking fountains, egg testers, incubators lamps, etc., in addition to incubators, poultry foods and alfalfa products.

The floor space occupied by the company, including its branches, is 304,000 square feet, a total of about 7 acres. At the Kansas City mill, the center of the oldest grain market, they have 30,000 square feet of floor space, use 9 electric motors, ranging from 2½ to 7 horse power each. The total capacity of this mill is 120,000 pounds of poultry foods equaling 60 tons, or 4 carloads per day, and 30,000 pounds of short cut meal and shredded alfalfa; the biggest and best equipped mill in the country, operated solely for the manufacture of poultry foods. There is no manufacture of breakfast foods or stock foods, included in these figures, but the whole of the grain goes into the poultry foods in absolutely pure shape, using no refuse nor sweepings. The motto of the company, "Quality first, the price as low as we can make it."

On one single day of last month there were 24 cars of this food en route from Kansas City mills.

The general business of the company is done through the medium of over 7,000 dealers and its six branch houses, enabling customers to get the goods when they want them and where they want them, and save freight over long distances, and having the advantage also of buying after personal inspection, the branch houses stretching from ocean to ocean from New York and Boston to San Francisco, the inland sections being attended to by the Kansas City, Buffalo and Chicago houses. The foreign trade is done through their London branch and 33 agents throughout the world.

A very important part of an incubator business is the catalogue, as upon this largely depends the sales of the

A CORNER IN CYPHERS INCUBATOR FACTORY ASSEMBLING ROOM.

The separate parts of the incubators enter this department at the farthest end, and from that point each man has his special work to do. The finishing touches are given by filling the double walls and the top with cotton (as shown on the right and left of picture) by placing the Cyphers split diaphragm in position (on the right) and by screwing down the top (on the left), when the machines are sent forward to the paint room.

with the object of supplying to better advantage a large trade westward of the Rocky Mountains, and developing the company's business to still greater proportions in a poultry-growing section that is second to none in the Union.

Up to May 1, 1899, the Cyphers Incubator Company had practically no agents. At that time it had no agency system. Now it has responsible, authorized agents in nearly every city in the United States and Canada of twenty thousand population and over, firms regularly in business who carry this company's good in stock. Furthermore, the company is now represented in most of

Those who, during the past five years, have contributed their best efforts towards developing the business of Cyphers' success and can be relied on to magnitude, feel a just pride in the company's success and can be relied on to keep its line of manufactures in the front rank. They ask no greater favor in this direction than to be judged by their works.

The principal ambition of its officers and co-workers is: The manufacture of a complete line of the best goods for poultrymen at the lowest prices consistent with such quality as will meet the requirements.

products. The Cyphers Incubator catalogue is one that can be compared favorably with the catalogues in any other line of business, and in size, quality of paper, illustration and descriptive matter are very seldom equaled anywhere. The main catalogue put out this season contains 228 pages. They also issue a 104 page catalogue for the foreign trade printed in seven different languages, a 40 page poultry supply catalogue, and in addition to these numerous other small catalogues. The unprecedented demand that has existed the present season for goods of this company's manufacture has been gratifying indeed. The company has been fairly "swamped" with orders, but the result has been the making of a new world's record in the manufacture of these articles. To do this work requires a small army, and the Cyphers Incubator

racy in keeping the records of the factory, the branch houses, and the business of its agents all over the world.

The machine shop is a very busy place in which are made the dies and tools, which enter so large in the manufacture of the metal parts of the machines, and which contribute to the perfect accuracy, economy and completeness of all the output of this factory; thus enabling the best type of machine to be sold at a low price.

The tin shop is one of the most complete in any manufacturing establishment. Here the most perfect and up-to-date machines for the rapid turning out of all the galvanized iron that is used in the construction of drinking fountains, incubator lamps, feeders, egg testers, etc., doing away with hand work, and as a result turning out thousands of these appliances at a minimum cost

on of the name plate in the shipping room.

In every department it seems to be the endeavor of those in charge to continually improve the process of manufacturing, devise new labor saving inventions to perfect and make accurate every detail, so when the finished product leaves the factory, the machine can be easily operated with success by anyone even though an incubator is an entirely new proposition to them. The illustrations especially made for AMERICAN POULTRY JOURNAL were selected as scenes from some of the busiest and most interesting parts of the factory.

All this and more we saw in the factory of the Cyphers Incubator Co. The limits of this article will not permit more detailed description. This is a partial record of what the Cyphers Incubator Company has accomplished. The world moves fast, and in a year from this date this record will undoubtedly be simply a basis of comparison with still greater accomplishments. To those interested in the poultry business it must be very apparent that the influence of incubator manufacturing on poultry business cannot be fully estimated. The constant advertising of incubators, the sending out over all the world of thousands of catalogues keeps continually alive and ever fresh the great value and corresponding profit in the poultry business.

Every year thousands of incubators are made and used, thus constantly adding to the volume of the poultry business of the country, and every year adds thousands of interested poultrymen to the ranks already well filled, thus establishing and continuing the poultry industry as the largest and most valuable industry in the country. The poultry business is larger than any other live stock, than any cereal crop, larger than the earnings of railroads and larger than the output of mines.

With these facts taken into consideration, it is clearly to be seen where the field is found for the sale of the products of the Cyphers Incubator Company.

CRATING CYPHERS INCUBATOR COMPANY'S STYLE A OUTDOOR BROODERS.

In the foreground appear the brooders ready for shipment; in the background they appear standing on end to dry, having just been painted. By actual count there were 258 brooders in this room, all of which were crated and shipped in two days, in addition to a number of other styles. A continual stream of brooders is passing through this room each day at this season.

Company now employ at its factory, home offices, mill, laboratory and branch houses more than 380 persons.

While the capacity of the factory is great, and the estimate for the season's business carefully made, they were far behind their orders, and on Feb. 27th they began running their entire factory nights, thus increasing the output nearly 22½ per cent. By this means they were able to catch up with orders by March 11th, and since that date have been steadily accumulating a safe surplus at Buffalo and each of the branch houses.

We were specially interested in the Office, the Machine Shop, the Tin Shop and in watching the assembling or putting together of the machines.

The office is a large room crowded to the limit with busy employees, all working together in a very democratic way and where every officer is in sight and easily accessible to anyone having business with them. The office is supplied with the latest up-to-date office appliances for speed, convenience and accu-

to the poultrymen. It is an interesting study to watch the assembling of the Cyphers Incubator. Everything is done by machinery that the greatest ingenuity can devise. Every bit of wood work is cut and accurately fitted by the use of machinery and even nails are driven by machinery. With each stage of development a new and interesting operation can be seen. Specialty work is observed throughout the whole factory, and as fast as one operation is performed the work is passed on to another workman, who does his work, until the shipping room is reached. In this assembling room, each man has his duty to perform and one can see an incubator grow from the cutting out of the first boards, the assembling of each part, the packing of the interior, the sandpapering and finishing of the exterior, the painting and varnishing and putting

CHAS. E. THOMPSON & Co.

First and second-class poultry should never be packed together. In such a case they are all rated at the second-class price. Males and females must never be in the same package, or rather mixed. Thin stock and that which is well fattened should be by itself, and the contents and grade be marked on the outside of the box. Ship in packages weighing from 100 to 200 pounds. Before packing, line the inside of boxes with paper, and place clean paper between the layers, and several thicknesses on top. Pack tightly and full up to the top, so that they cannot shuffle about on the way and become bruised. Ship to a reliable commission house, write plainly on the outside of the box the contents, weight, address of the firm shipped to, as well as the name and address of the shipper.

The British consumer sticks loyally to his demand for home-grown poultry, and the result is that thousands of French, Italian, Canadian and American fowls are regularly palmed off as English stock.

This fence is put up in 10 and 20 rod rolls. We accept orders for any number of rods or rolls, and pay freight on orders for \$10. or over almost everywhere. We have poultry yard gates covered with this fence. They open both ways; are very convenient, durable and sightly. Price list free. For more than five years we have been selling Union Lock Poultry and Field Fence to farmers and poultrymen. They prize it for many reasons. It is

The Fence That Does Not Sag.

It stretches perfectly and fits uneven ground. It is easily erected. Its horizontal cable wires make it strong enough to turn all stock, while its 1 1/4 inch meshing at the bottom keeps in the little chicks. Extremes of heat and cold do not affect it, it adjusts for all temperatures. It is sold at farmers' prices.

WE MAKE PROMPT SHIPMENTS. For this purpose we maintain mills in both Connecticut and Illinois. We ship from nearest mill. Send in your order now and be ready for an early spring. Catalog of Farm, Poultry and Lawn fence free. Write for it.

DAISY.

The Autobiography of a Hen.

I remember but little of the first few weeks of my life, in fact I do not know just how old I was when I was running around with my mother and brothers and sisters picking up all sorts of stuff. Our mother loved us dearly. She used to give us all she found to eat, never once thinking of eating it herself. One day the cat got one of my sisters, which grieved my mother very much, after this she never went near the cat again. One day our mother left us and she never came back again. Oh! how lonely the time was without her. We went all around trying to find her, but we never caught a glimpse of her.

From this time on I can remember quite good the happenings of my life. Our master used to be very cruel, he fed us but once a day and our coops were never cleaned. We never got any water, lest we went down to the pond and got it there.

One day a man came along and

COLUMBIAN WYANDOTTE HEN.

Bred and owned by Hazelmere Poultry Yards, Knightsville, Cranston, R. I.

bought me; he put me in a box and carried me off. When I was released I found myself in a splendid poultry house among many other chickens like myself. Oh! how glad I was to have got away from that cruel master of mine, all the dishes were filled with food and water. Oh! how I ate and drank, I thought I would never stop again. Then I went into the scratching shed and took a dust bath.

One day my master took me up and weighed me. "By jinks," he said, "this here pullet weighs two and a half (2 1/2) pounds. Then he put a tin thing, which he called a leg band, around my leg and then he put me down. Oh! how proud I felt for the rest did not have any leg bands on. By and by I felt that something queer was going on inside of me. One day I had

CHAS. F. THOMPSON & CO.
LYNNFIELD CENTER, MASS.

See ad on page 368.

96 Point Pullet, The White Kind.

an awful desire to go in the nest. At last I could not stand the temptation, so I jumped in the nest and sat down. Pretty soon I laid an egg and just as I was going to jump off, my master

After this day I visited the nest frequently, and one day I had a desire to stay on the nest. I soon realized that I was broody. The following day my master came in and when he saw that

heard a cracking, and I looked down and found out that a chicken had just come from the shell. By and by they all began to crack, and by the twenty-first day I had a brood of thirteen little chicks, seven being black and six being white. Then I took them out to scratch, but they would not scratch nor eat, all they did was to say peep, peep.

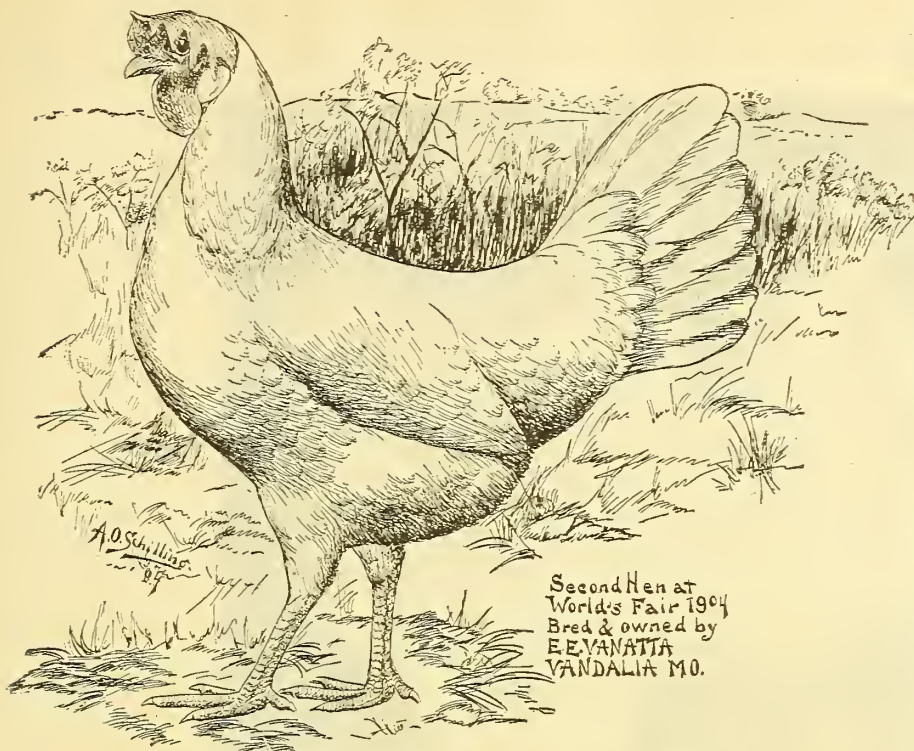

That night my master put me in a coop that had slats in the front so that my chicks could go out, but that I had to stay in. One day a great big gray cat killed eight of my brood. The next day the cat killed the rest. When my master saw him take the last one away, he got out his gun and there was a mighty report and the cat fell to the ground. That night my master put me in the chicken house. Oh! how lonely I was without my chicks. While I was thinking about my chicks, someone caught me roughly by the neck and threw me into a sack. I surely thought my end had come. All the other chickens were also placed in sacks. Then the bag began to move and I knew that we were being carried off. When me and the rest of the chickens were released, we found ourselves in a lonely barn. My master offered a large reward for the thieves. They were at last captured and sent to jail. In the morning we were all carried back to my master's place. When he looked at us he recognized me at once. He took me up and said: "My dear Daisy, I would not part with you for all the world. You are mine for good."

JEWEL INCUBATORS and BROODERS are sold on **thirty days' free trial**—a guarantee backed up by a capital of \$2,000,000. We will prove to anyone that our machines are more accurate and sure than any others known. Perfect regulation, automatically controlled. Our Supply Catalogue gives full particulars concerning our unequalled offer and tells how to raise poultry at the least expense. A large three color picture of a White Plymouth Rock cock, that sold for \$500.00, will be sent those interested. We are the largest poultry supply dealers in the world.

JEWEL CHICK FEED is prepared and manufactured by us. It is guaranteed to raise more chicks to maturity than any other grain feed known. It is a perfectly balanced ration. Money refunded if it fails. No dirt and mill sweepings found in this mixture. Only pure, sound and wholesome grains used in the Jewel Feed. No up-to-date farmer or poultryman can afford to be without our catalogue. It's Free.

Address: POULTRY DEPARTMENT, Box E, INTERNATIONAL STOCK FOOD CO., MINNEAPOLIS, MINN.

THE BEGINNER.

To the beginner in the Poultry business I would address these few words.

The hatching season is about on us and we will either have eggs for sale or will want to buy some. To the one

Select the very best hens or pullets from your flock and put them in the breeding pen. Never have more than fifteen hens to the one cock. It is best to always allow two cocks for each breeding pen always keeping one in reserve. In other words alternate weekly with a

fidence of your customer.

When you receive an order for eggs, write and acknowledge receipt of same, stating when you expect to ship, then the day you ship them drop your customer a card telling him you have shipped the goods and about the time

One of Ira C. Keller's winning pens at the World's Fair, White Wyandottes. Mr. Keller was the only exhibitor who won more than one premium on breeding pen of this variety. He showed four pens and won on three of them. Send to Prospect, Ohio, and get his large circular which tells all about his winnings and birds.

who has eggs for sale—Be sure you have a good ad. in some good reliable poultry paper. State clearly what you have for sale and keep the ad. always before the public.

You may not at first see much fruit from your efforts, but if your goods are up to the standard and you *don't shoot too much hot air*, your next year's orders will far exceed your expectations.

change of cocks for each breeding pen.

In so doing you will not be the one who will receive these words: "Not over half of your eggs hatched for me."

When you ship eggs tell your customer that you will replace eggs at half price to those who do not get over a two-third hatch.

In so doing you will gain the con-

he may expect them.

Then in about twenty-four days write a letter asking about the hatch, whether it was a good one or not. This will show to your purchaser that you are

interested in the hatch, even after you have received your *Dollars*.

If orders should reach you faster than you can meet the demand, write to each customer that it will be impossible for you to let him have the goods at the time specified in his letter and that if he cannot wait till a specified time, say that you will cheerfully refund the party his money. If you do this it will be very seldom that you will have to send the money back. Lastly let me say, Be honest and do as you say you will. Above all things, don't say that you will answer all communications accompanied by a 2 cent postage stamp, as I was told in a letter from a noted breeder not long ago.

These seem minor affairs but they will count in your favor every time.

I am sincerely yours,

Dr. O. G. CRAWSHAW,
Dawson, Pa.

WINSTED'S POULTRY SHOW.

Old Western Connecticut Poultry Association Revived—Score Card Exhibit December 19-22, 1905.

Poultry fanciers will be pleased to learn that the old Western Connecticut Poultry Association of Winsted, which was organized in 1885, has been revived and a score card exhibit will be given at the armory Dec. 19-22, 1905. A meeting of the members and others was held at the town hall recently and officers elected as follows: G. L. Foskett, president; A. P. White, Dr. G. W. Brown, S. V. Beckwith, E. B. Parsons, Winsted, J. D. Bishop, Torrington, vice-presidents; L. C. Capewell, secretary; F. D. Hallett, treasurer; R. S. Seymour, H. M. Sweet, J. H. Holbrook, F. B. Catlin, William Aukland, executive committee.

This association has probably given some of the largest and best poultry shows ever held in the state. Each exhibitor was given a square deal in the awarding of premiums and the reputation that this organization obtained through their hospitality is fresh in the minds of many breeders today.

Enthusiasm among poultrymen in this section has been aroused to a high pitch, and already breeding pens have been mated in anticipation of exhibiting at Winsted's score card show next December.

Liberal premiums in both regular and specials which will be open to the competition of the world, will be offered, and every member has gone to work with only one end in view—to make it the leading show of the state.

Winsted is the terminus of the Naugatuck division of the New York, New Haven & Hartford railroad system and is on the line of the Central New England railroad, which connects the Hudson river at Poughkeepsie and Rhinecliff from the west and Hartford from the east. It is the largest and most important place on the line with the exception of Poughkeepsie and Hartford.

The armory is only about two minutes' walk from either station. It is roomy and well lighted and ventilated, in fact an ideal hall for a poultry exhibition.

A very cordial invitation is extended to all exhibitors to show at Winsted next December.

L. C. CAPEWELL,
Secretary of the Western Connecticut Poultry Association of Winsted, Conn.

SAFE GUIDE FOR ADVERTISERS.

The well-known advertising agency of Lord & Thomas, Chicago, New York and St. Louis, has issued the 1905 edition of their "Pocket Directory of the American Press." In compact and convenient form, it gives complete and reliable information regarding the circulation claimed and other data on all advertising mediums published in the United States, its possessions, and Canada, with the latest Federal Census. An entirely new and very useful feature is a complete directory of Outdoor Display. This 800-page book is a necessity to every business man who realizes the value of judicious advertising.

Geo. M. Kline, Downer's Grove, Ill., writes: "My Barred Rocks won at Downer's Grove 1st and 2nd cockerels, 1st and 2nd hen, 3rd pullet; at Naperville on three entries, 1st cockerel, 1st hen. My White Wyandottes won at Downer's Grove, 1st and 4th cockerels, 1st and 3rd pullet; at Minneapolis won 2nd on pullet."

The classes at these shows were very large and competition was very strong, and it took birds of quality to win. I not only breed prize winners but they are bred for heavy laying qualities. I have had twelve years' experience in breeding these fowls and my yards contain birds of exceptional quality. All customers will get eggs from my best pens containing all my winners."

No wonder it's good!

A 3 months' course for \$2.00. Regular price \$35.00. Simply send \$2.00 and a coupon taken from a package of Pratt's Food, and the Lectures will be promptly mailed each week. For further particulars of the best and most complete Course ever offered, write Pratt Food Co., 156 Walnut St., Phila.

PICKETS LOCKED IN CABLES

Can't slip, but stretches perfectly to fit uneven ground. Fine meshes at bottom for little chicks. High as you want it, 1 to 7 ft. A poultry fence for all fowls that does not sag.

We sell direct to Farmers and Poultrymen.

Prompt Shipments at Factory Prices.

Mills in Connecticut, Illinois, California. Write for catalogue.

CASE BROS., 28 Main St., Colchester, Conn.

It is amusing to note, in reading the claims made by originators of new breeds, that the particular merit in the variety is extra quality of flesh. The truth is that any breed properly fed and cared for will be tender, juicy and toothsome; and no breed will be plump, tender and fit for the table unless thus handled.

A LITTLE EGG GOSSIP.

Frosted combs will check egg production.

Overfat pullets are tardy in beginning to lay.

Late molting hens are as a rule in different winter layers.

Feeding cooked or steamed clover hay, prevents soft-shelled eggs.

Don't move the layers more than is actually necessary, as it is apt to check their laying.

Remember it is the food given, and not the breed employed, that gives us the rich flavored eggs.

From estimates made it is agreed that a hen can pay her board with one egg a week, providing the average market price for eggs averages 2½ cents each.

The British market calls for eggs that will weigh 1½ pounds to the dozen. Those engaged in the import trade believe that in large eggs the albumen is thicker than in small ones, and that about 90 per cent of the stale or bad eggs are small eggs with white shells. Shells of a brown color are preferred, and must be clean without having been cleaned.

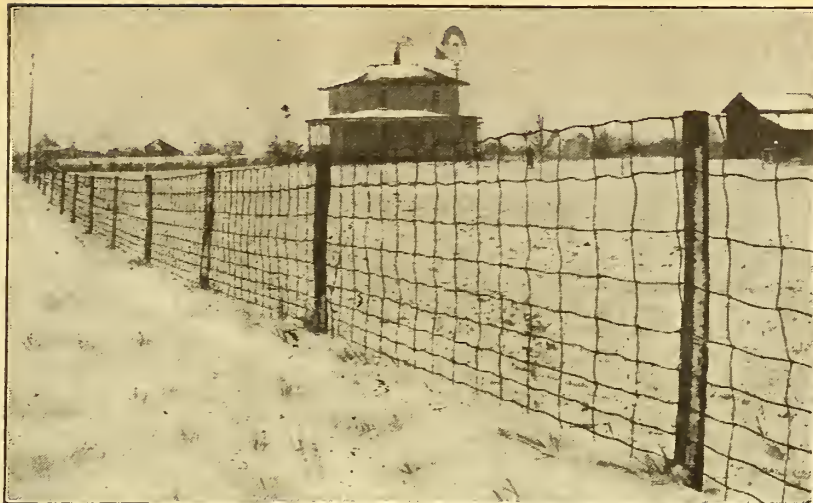

A speaker at a Farmers' Institute said: "Yarded fowls are the modern improved egg machines. Fowls let run and given free range cannot produce as great a number of eggs, for the reason that they convert a part of their food into muscle, and thus reduce their capacity for forming the eggs." In his own case, he said, he increased his egg yield 18,720 eggs last year by yarding his fowls.

H. W. Collingwood says that we may have lime in our flour, lard in our butter, peanut shells in our coffee, sawdust in our tea, basswood in our hams, and sand in our sugar, but the eggs cannot be successfully counterfeited. Our little friend, the hen, with her marvelous inside fixtures, will still continue at the old stand, putting her humble grist together, and shelling out this most miraculous of animal product—the egg.

Soft-shelled eggs are caused generally by a lack of lime in the food. The shells are a lime formation, and if there is not a sufficient amount of that material in the food, the shells will not harden. The trouble has also been traced to indigestion in fowls. An overfat condition, too, will show itself in the nature of the egg when laid. Instances are known where hens frightened or annoyed by dogs have dropped eggs with a soft shell.

The French method of preparing poultry for market is acknowledged, in some respects, superior to others. The birds are made very fat and plump, and are manipulated to increase plumpness. A few feathers are left on tail and neck. The skin is white and delicate. Each carcass is tied with a ribbon, and is shown back uppermost instead of breast up, according to the English as well as our own style.

One hundred pounds of fresh hen manure, according to analysis, contains about 50 pounds of water, 16 pounds organic matter, and the remainder in ash. In other words, it contains 2.43 per cent of phosphoric acid, 2.26 per cent potash, and 3.25 per cent nitrogen, as ammonia and organic matter.

PAGE FENCE ON THE FARM OF MR. AUSTIN FITTS, ROLLIN, MICH., ERECTED IN 1885. PHOTOGRAPHED JANUARY 4, 1905.

Read what Mr. Fitts writes under date of January 14, 1905:

"In the fall of 1884 I gave Mr. Page an order for 80 rods of Page Fence, which, by the way, was the first fence he ever sold. This fence was erected in the summer of 1885, has had no repairs excepting new posts where they have rotted off, has given me great satisfaction, and from present appearance will be a faithful servant through all my declining years."—AUSTIN FITTS.

A Page Fence of today ought to last much longer than a Page Fence of twenty years ago. The reasons are:

First—We make all our own wire, and are using the best high-carbon, spring steel

wire that money and skill can make for all the horizontal bars—wire that actually has double the tensile strength of common fence wire of the same size.

Second—We are using larger cross-bars—all our stock fences being made with No. 12 cross-bars, unless otherwise ordered.

Third—We are taking infinitely more pains with our process of galvanizing—using more zinc and spelter, putting on an extra heavy coating, and applying it more evenly and smoothly, and last, we are continually improving our weaving process—knitting the cross-bars around the horizontal bars more securely than ever before, and putting a Loop Top on many of our

stock fences. In fact, there is every reason why Page Fences are better fences now than ever before, and why a Page today is a Page to stay.

Otter Creek Poultry Farm Company, Watertown, N. Y., won at Watertown, N. Y., Jefferson County Fair, held September, 1904, in strong competition, four firsts and one second on seven entries, including first and second B. C. White Leghorn cockerel, first S. C. Black Minorca cockerel, first Barred Plymouth Rock cockerel, and first Barred Plymouth Rock pullet.

The Cousins Automatic Egg Turning Tray, manufactured by J. L. Cousins, Warren, Pa., is selling like hot cakes. If you are using incubators you cannot afford to be without them. They are made to fit any machine. Mr. Cousins will send a free catalogue describing them to any reader of AMERICAN POULTRY JOURNAL.

ORDER NOW

The New Standard of Perfection which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of

American Poultry Journal

Help you get the New Standard cheaper

1.—Send us One New Subscription to the American Poultry Journal at its regular price of 50 cents a year and we will let you have **The New Standard for \$1** instead of \$1.50.

CARE OF SETTING HENS.

A Method which has Proved Successful.—By Victor N. Caneday.

Notwithstanding the fact that thousands of incubators and brooders are used by the poultry raisers of America, there are many who hatch and raise their chickens in part or entirely in the old way.

To the small breeders and those keeping pedigree records of their chicks, the setting hen is still a favorite. As a breeder of pedigreed fowls we have given the care of setting hens considerable thought and our method of handling them will probably be of some interest to those especially who have had difficulty with them.

Like everything else, we found there was a right way and wrong way to handle broody hens, and while there may be other methods fully as good as the one we have adopted, we feel justified in giving our experience because of the good results obtained.

If we have hens enough of our own to spare for setters we place those wanted for the purpose in a pen by themselves, leaving three or four china eggs in each nest, and disturb them as little as possible while they are on the nest. In this way we have been able to get them broody at any time desired and in sufficient number to meet any demand we had for them, while in other pens where no nest eggs were used and the eggs gathered regularly and often, very few became broody until late in the season, and some not at all.

When we sell ourselves short of hens, so that we have none left except those intended for breeders, we buy them from neighbors around and remove them to our own place, where they settle down to the business of raising a family with as much determination as though no one had interfered with their choice of home.

In the selection of setting hens we never use a hen which does not show unmistakable signs of broodiness. For our purpose we want a hen which has stuck to the nest at least two nights of her own accord. In case we cannot know as to that, we take her anyway, if she has begun to lose the feathers from the under portion of her breast and body. We tie their legs, place them in a common gunny sack until they reach our house for setters, where they are first given a thorough dusting of an insect powder, which is sure "Death to Lice." They are then placed in roomy nests and given three or four china nest eggs to nurse until we are satisfied by their behavior that they can be trusted with our choicest eggs. (All our nests for setting hens are so arranged that a board sets down in between a cleat and the front of the nest, closing the hens in securely.) These hens are then left closed in on these nests until the following day, when all the hens are let out in lots of six or eight at a time, for

feed and water and to avoid their dropping. We generally arrange it so as to let them out seven at a time and watch them until they have all voided their droppings, when they are each placed back on their own nest. If this matter is never overlooked there will not be any fouled nests and rarely any broken eggs. In fact, if a setting hen's wants are properly supplied she will in ninety-nine cases out of a hundred, do her part of the work to the entire satisfaction of her keeper. We feed them corn exclusively. A five-pound butter jar is used for corn and another for water. Grit is scattered about over the floor of the pen.

In most cases the second day after removing a hen to the setting house she is settled down and willing to let us do most anything we want to with her. We do not give them a setting of eggs until they will let us handle them on the nest without making any fuss. When we have from five to seven or more hens ready we set them all at one time, so that we can give three or four hens all the chicks hatched. We consider ten and eleven eggs enough for any hen during March in this section, and twelve and thirteen is plenty for later hatches, while from fifteen chicks for the earliest broods to twenty for later ones is as many as will thrive and do well, in our experience. We do not care to have chicks hatched earlier than the second week of April if they are going to be left outside in brood coops with the hens. In the selection of eggs for these setting hens we are very careful to see that none have been cracked or have weak shells, as such are almost certain to be broken and soil the nest and endanger the hatch of that nest full. We give each hen a thorough dusting with insect powder before putting her on the nest and each week during incubation and again before being placed in the coop with her brood.

The two principle secrets of success with setting hens, as we find them are in giving the hens large, roomy, well cushioned nests and being sure that each hen voids her droppings before she is allowed to return to her nest. It is neglect in this latter case that causes hens to become restless, break eggs, foul the nests and destroy their keeper's peace of mind.

In preparing the nests for setters we sprinkle the nest box thoroughly with kerosene oil as a preventive of red mites getting a foothold. For nest material nothing but good clean oat straw is used and we use plenty of it, working it well into the corners of the nest and packing it down firm so as to leave a good thick cushion of straw between the hen and the bottom of the nest. Large hens must have large nests or broken eggs and chicks killed in the nest will be the result. A hen ought to have room enough so she can stand up comfortably and turn around in the nest. We set from twenty to thirty hens and upwards a season, and find we can attend to the wants of about two dozen hens in three-quarters of an hour each day. We try to be regular about the time of day we let them off. We rarely let them dust themselves, and never let them out in the yards, most of them being anxious to go back on their nests before they are really ready to. In buying broody hens from neighbors it sometimes happens that hens with scaly legs are used, in which case we give their legs two or three applications of kerosene oil before giving them a setting

of eggs to care for.

We have done considerable experimenting with pedigree trays in our incubator and are trying some new style trays this season, but up to the present time we have found the natural method far superior for the purpose of pedigree breeding, and when rightly managed it does not require an excessive amount of work or time to care for quite a number of setting hens. In many little ways we have learned to economize time until the hatching season has ceased to be as much of a trial as it often is where there is a lack of system and proper handling of the hens. In dusting our setters, we do it when caring for their wants while they are off the nests—the first hen that is ready to go back is dusted and placed on her nest, the second likewise, and so on, and when through caring for their other wants that day the entire lot have received their weekly dust bath with a dust that is sure death to every louse on them and at the same time it has been done in much less time than the hens would take if allowed to dust themselves.

Hens handled in this way may be reset successfully and show no bad effects from it. In warm weather proper attention should be given to ventilation, as hens in close nests easily become overheated if the house is not airy. In hot weather nests ought to be made with special reference to ventilation and the doors and windows of the houses should be removed and screens of inch mesh wire netting used to take their place.

Taylor's Falls, Minn.

The *Maine Farmer* some years ago presented the following type for what it termed a "frictionless egg-making machine:" *Head*—Long and slim; good width in front. *Eyes*—Full, large, expressive, indicative of intelligence. *Body*—Long, slim, broad across shoulders, triangular, deep in front, the apex at rear. Not compact. *Legs*—Good length. "Find this type where you will, it is the egg builder, provided it is backed by the directing energies of an egg-making owner. Form is not everything, but form is necessary for the most to be accomplished in either line. Line up, boys, for the meat maker or egg builder, for it is along these lines the silver cart wheels will roll. The utility bird is the one to tie to and its possibilities are beyond present comprehension.

It is true that supply and demand influence summer prices. Here in Hammononton, every season when small fruit is ready to be shipped to market, thousands of Italians are imported from the large cities to pick the berries, and as they are great egg eaters, the demand is greater than our poultrymen can supply. The result is that eggs in Hammononton bring from two to five cents more per dozen than they do in the city of Philadelphia.

It is important, after dressing poultry, to throw them in a tub of ice water, to which a handful of salt has been added. Keep them there until the animal heat has entirely left the body. Carcasses have been known to turn green in spots when packed before perfectly cooled.

BREVITY ITEMS.

HINTS ON DOCTORING.

Good ventilation will prevent sickness.

The first aim in mating should be for hardness.

The offspring from overfat parents are puny and weak.

Exercising during the molting period lessens the dangers.

Overcrowding will bring on disease about as quickly as anything.

Canker is the penalty for having poor houses, unclean quarters, musty or unwholesome food.

Indigestion can come in three distinct forms, viz.: in the stomach or bowels back of the gizzard; on the gizzard; in the crop.

Do not allow the fowls out on the snow, as snow water is not only apt to bring on a sharp attack of diarrhoea, but the birds will reduce in flesh.

A ton of wheat contains 41 pounds of nitrogen; barley, 32 pounds; oats, 38 pounds; corn, 32 pounds; peas, 70 pounds; beans, 81 pounds; hay, 31 pounds; clover, 39 pounds; milk, 10 pounds; potatoes, 6 pounds.

The most satisfactory treatment we know of for scaly legs is to wash the fowl's legs well with warm water and castile soap, then rub on an ointment made of equal parts of melted lard and kerosene. Repeat daily until the legs are clean.

POINTERS ON GEESE.

Geese seek mates in February.

The gander is a gallant protector.

Who ever heard of a gluttoned goose market?

The breeders should not be given much grain.

The goose's appetite is not readily spoiled.

The gander is fearless and vicious in his defence.

The first year geese very seldom become broody.

Twenty goslings per goose per year is a good average.

Geese must have range; they cannot stand confinement.

The incubator period of the goose egg covers thirty days.

As layers, geese are profitable until twelve years of age.

Vegetables and cut clover should be part of the bill of fare.

It is easier to raise geese than any other variety of poultry.

It is estimated that ten geese will consume as much grass as a cow.

After laying, the goose covers her eggs with the nesting material.

Inbred stock make very undesirable market poultry. They are generally puny, skinny birds.

Always bear in mind that quick growth and clean quarters are important factors in making tender and sweet meat.

A good carcass poorly dressed loses its value. It always pays to take the greatest of care in placing your goods before the buying public.

There is imported from Germany smoked goose breasts, a very expensive and much appreciated article of food among our Hebrew friends, says *Poultry Topics*. It is considered quite a luxury, and sells for 25 to 30 cents a pound.

CHAS. F. THOMPSON & Co.
LYNNFIELD CENTER, MASS.

See ad on page 368.

Who of you would call for an egg for dinner if you had had a stale one for breakfast? asks J. E. Beyer. Every fresh and wholesome dozen of eggs creates a demand, while every stale dozen helps to destroy it.

THE FEEDING QUESTION.

Pea meal is nutritious.

Rice is easily digested.

Linseed meal is cathartic.

Linseed meal is a cooked food.

Wheat is rich in solids, but poor in water.

Barley is very nutritious but rather laxative.

There is fully 5½ per cent of fat in oatmeal.

Barley has much of the same qualities as wheat.

Potatoes contain about 22 per cent of starch.

Properly-fed fowls are those that are regularly bred.

A feast today and a famine tomorrow will upset the best pen of layers.

A teaspoonful of linseed meal in the mash is a good allowance for a hen.

F. L. Cooper says that linseed meal is

Raw apples are relished.

It is the healthy hen that is always hungry.

Never wash the eggs intended for hatching.

Market as soon as the desired weight is obtained.

Never feed more than they will quickly eat up clean.

It is always best to keep the ducks a little hungry.

You can soon spoil a good reputation with poor stock.

The average turkey egg record is about 45 eggs a year.

A duckling does not know enough to get out of danger.

The foundation of success is based upon hardy parent stock.

You may have cause to regret the fun you had teasing the gander.

Wheat is king of egg foods; oats next; and then comes barley.

There should never be more than fifty ducklings placed in a pen.

In many sections the cultivation of the turkey is being sadly neglected.

Rankin does not favor the late-hatched chicken for market purposes.

The American type of Brahma is a better utility bird than the English bred.

Cornmeal will give a golden color, and buckwheat a white color to the skin.

As the sale of geese is made by the pound, proper fattening is worth considering.

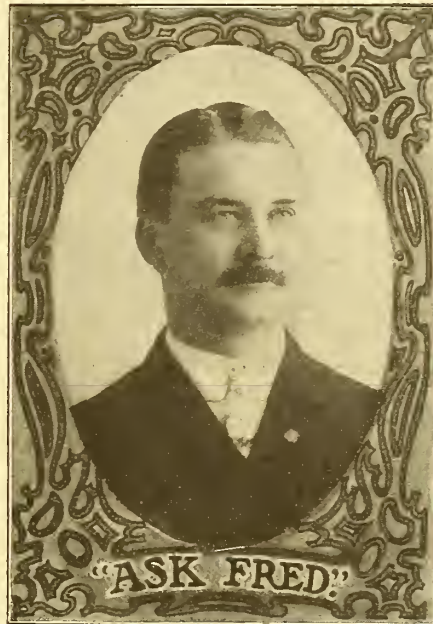

For hatching purposes, eggs should be kept in a temperature as near 60 degrees as possible.

Don't allow the chicks to crowd and thus have a whole lot of deformed fowls on your hands this fall.

Bathing in water is excellent exercise for breeding ducks, but the market ducks should not be allowed to bathe.

Mrs. J. L. Todd some years ago wrote that hens, like men, like a variety of food. Mrs. Todd's theory is correct.

To secure good broiler prices in January, February and March, the chickens must be hatched in October, November and December.

F. H. PHILLIPS.

Manager Chicago Poultry Supply House.

today about the nearest perfect food for fowls for egg production.

Green cut bone is a raw meat ration.

It is cheap; it is beneficial in many ways, both as a food and tonic, says a writer in *Country Gentleman*. It is easily obtained and easily fed, and is a paying investment.

Judicious feeding has become today the most important consideration in husbandry, says E. O. Roessle. Its good effect means a satisfactory season, and its bad effects mean discouragement and loss of interest.

ABOUT BROILERS AND ROASTERS.

Close-grained meat is preferred.

Fowls that range are more or less tough.

Hog-fat is never desirable in poultry for market.

Market the sexes separately, be they dead or alive.

When poultry is overfed, it cannot be put in the proper market condition.

Most Gratifying.

The unprecedented demand that has existed the present season for goods of this company's manufacture has been gratifying indeed. It has exceeded our carefully compiled estimates more than fifty per cent. During eleven weeks the orders received fairly "swamped us." But the result has been the making of "A New World's Record" in the manufacture of incubators, brooders, poultry foods and poultry supplies—a record this company has held during several years.

One Month's Output, Feb. 15—March 16. Cyphers Incubator Company now employs at its factory, home offices, mill, laboratory and branch houses more than four hundred persons—a small army! At the present writing, March 17, we are manufacturing

An Incubator Complete Every 4 4-5ths Minutes.

or an average of 126 complete machines during each ten-hour work day. Our record-day for February was 146 incubators in ten hours! Besides this our daily output of brooders (all styles) is now 102 per ten hours, or

A Complete Brooder Every 3 4-5ths Minutes

crated and ready for shipment. Furthermore, we turn out daily literally hundreds of smaller articles, such as drinking fountains, food hoppers, egg testers, brooder stoves, egg cabinets, brood coops, etc. These surprising results have been accomplished by the addition of costly machinery, the use of which not only has enabled us to multiply the output, but the exactness of all parts is such that hand work simply cannot compare favorably with goods of our manufacture. Each and every piece is certain to fit and fit right; taken together the various parts produce standard goods that are practically perfect in mechanical construction. When our present immense output is known and duly considered, the interested public can readily understand why it is that we are able to manufacture better incubators this year than ever before and to sell them at reduced prices, as set forth in our catalogue.

3,258 Incubators and
2,652 Brooders

In One Month!

That Was the Record
for the twenty-six work days
between Feb. 14 and March 17,

1905, besides 11,821 other separate and complete articles—exclusive of poultry foods and alfalfa products. (For report of Kansas City mill output for same twenty-six days, see opposite page.)

Despite the foregoing unequalled capacity we were at one time nine days behind our orders; hence on Monday, February 27 we began running our entire factory nights, thus increasing our output nearly 22½ per cent. By this means we were able to catch up with orders by Saturday, March 11th, and since that date have been steadily accumulating a safe surplus at Buffalo and at each of our branch houses.

PERMIT US TO SAY in this connection that we of course are greatly pleased with the very heavy demand that now exists for our goods. It fairly indicates the superb present condition of the poultry industry, also the wide-spread confidence in which the Cyphers Company's manufactures are held by the poultry public. We embrace this opportunity to express full appreciation, and to assure our thousands of friends and customers that we shall continue to do all in our power to merit their trade and confidence. At present we are in a position to fill promptly such further orders as are entrusted to us and we respectfully solicit a continuance of your liberal patronage. A word of caution: Be sure you buy the incubators and brooders you really want, and that you place your valued orders in the right hands, thus avoiding delay, disappointment and personal loss.

Not Second-Hand

—BUT—

Brand New,

1904 Style Cyphers Incubators.

We have on hand, left over from last fall, when our improved 1905-pattern machines were placed on the market, a full assortment (about 200 machines) of brand new 1904-style Standard Cyphers Incubators, that we shall be pleased to close out to first-comers at the following prices, f. o. b. Buffalo, or nearest stock depot:

- No. 0, (60-egg size) \$10.00.
- No. 1, (120-egg size) 13.00.
- No. 2, (220-egg size) 16.00.
- No. 3, (360-egg size) 18.00.

NOTICE, please, that the above described machines are not "second-hand incubators," built three, five and seven years ago, and used season after season but are brand new goods that were manufactured by us last fall—late in 1904. These Standard Cyphers Incubators have not been used at all. Furthermore, they are "the genuine article." Address all orders for these 1904 machines to

Cyphers Incubator Company,
Buffalo, N. Y.

Just a Sample—

Others Will Follow.

Norwalk, Conn., Feb. 123, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

Gentlemen:—In response to your request that we allow you to photograph our incubator cellar, would say that we shall be only too glad to have you do so, as we feel proud of the fact that we have your incubators in place and all in perfect running order.

As stated to you before, we now have 84 of your No. 3 Standard Cyphers Incubators and they are giving perfect satisfaction. We are also glad to inform you that we have no cause for regret having requested you to replace the 12 "Model" Incubators, which we purchased last year, with 12 more of your Standard 1905 pattern incubators, which, in addition to the original order of 72, which I handed you last fall, makes as above stated, 84 machines, which is the full complement of our incubator cellar. In fact, we constructed it with the idea of placing therein 84 "Model" incubators, but after having operated them one season, decided that we could not afford to go back on the old original Standard Cyphers, which has stood me personally in such good stead while managing the Oxford Duck Farm, Yardly Duck Farm and the Ledgewood Duck Farm where I have been located for the past year. We expect to market this year 50,000 ducklings.

Yours very truly,

Edw. McFarland Mgr.

World's Greatest Poultry Food and Alfalfa Mill:

Additional to our well-known, trade-marked, sealed-bagged brands of Laying Food (for heavy egg yield,) Forcing Food (for broilers) and Scratching Food (for growing stock,) we manufacture and control the justly celebrated

CYPHERS CHICK FOOD

A complete, ready mixed, balanced food for little chicks,

That consists of a widely-tested formula, based on expert analysis, and furnishes every element needed to properly nourish and rapidly develop bone, flesh and feathers. Our motto: "Quality first; price as low as we can make it". The extraordinary cost of wheat and other grains the present season positively will not affect either the quality or price of our trade-mark brand of chick food: On this you can rely—Cyphers Chick Food is today the Standard, and we shall keep it so, despite the present high prices of grain.

THIS IS THE YEAR when poultrymen will profit greatly by our resolve to keep up the quality and keep down the prices of our poultry foods. The cost of wheat, for example, is nearly twice what it was when the prices of these poultry foods were fixed four years ago, but the establishment of our large and perfectly equipped poultry food and alfalfa mill at Kansas City, Mo., the chief primary grain market of the world, the use of special machinery installed at heavy cost and the shipment of goods in car lots at lowest freight rates, have enabled us to partly offset the large increase in the prices of raw materials and thus keep the quality the same, (as a matter of fact we have improved it) and to still sell at the same prices as heretofore. On your part we ask that you do us the justice to compare our chick food with others on the market—not with samples, BUT WITH ACTUAL SHIPMENTS.

OUR KANSAS CITY MILL manufactures nothing but poultry foods and clover and alfalfa products—no breakfast foods nor ordinary stock foods. From us every customer will receive absolutely sound, cleanly cut, dust-free grains, not by-products, waste materials and sweepings that remain after putting the better parts of the grains into other foods. We buy for this special purpose every bushel, every ounce of grains and seeds we use! That is why Cyphers Chick Food is the Standard.

It makes chicks healthful; being scientifically balanced (by analysis); it aids digestion and thus prevents diarrhoea and howel trouble.

It makes chicks grow, because it is compounded by experienced poultrymen who have spent the greater part of their lives in the business of raising chickens.

It makes chicks feather right—no ragged plumage, drooping wings and death-marked, weary-looking chicks, because the feather-making material is in this food in correct proportion. The best known and most successful poultrymen in the country now use and publicly endorse Cyphers Chick Food. This fact proves its high utility value.

Here are 3 sample letters of endorsement

Furnishes Bone, Muscle, Blood, Flesh and Feathers.

Iowa Falls, Ia., Oct. 13, 1904.

Cyphers Incubator Co., Buffalo, N. Y.

We feed Cyphers Chick Food and Beef Scraps and could not afford to be without the Chick Food. The men who "thought out" this mixture of seeds and grains have made it easy for every poultry raiser to solve the problem of successful chicken rearing. It meets all the requirements of the growing chick—bone, muscle, blood, flesh and feathers. Yours respectfully, THOS. F. RIGG.

Her Pullets Were Laying at Five Months Old.

Stockton, N. J., Oct. 11, 1904.

Cyphers Incubator Co., Buffalo, N. Y.

I have used your Chick Food, Forcing Food, Beef Scraps and Cut Clover, and I will say that I will never try again to raise chicks without these foods, for my chicks were never finer. My Plymouth Rock pullets were laying at five months old, and they were as pretty as pictures. MRS. W. R. MICHENER.

Hatched Seventy; Raised Seventy; Lost None.

Charleston, S. C., Aug. 2, 1904.

Cyphers Incubator Co., Buffalo, N. Y.

I bought from your agent here your Cyphers Chick Food, and fed nothing except that until my chicks were eight weeks old. Out of 70 chicks hatched I have raised 70, not losing a chick. They are now going on six months old, pullets pretty near ready to lay. H. WILBUR.

Be Careful Where You Place Your Orders.

The following explains why you should be careful, unless you wish to risk delay, disappointment and personal loss:

Cyphers Incubator Co., Buffalo, N. Y.

Randolph, Mass., Feb. 21, 1905.

Gentlemen:—I have worked hard for the last three years to build up a broiler and roaster business, buying a Cyphers Incubator each spring. Thinking I would get out a few more broilers than usual, and seeing an advertisement of the New England Agents for the Model Incubator, announcing "six Cyphers Incubators for sale cheap," I sent them \$18 Jan. 13th. They promised to ship at once. I had a batch to put down on January 25th—but no machine. I sent them word and got no satisfaction. I lost this hatch and still I heard nothing from them, but they were advertising "CARLOADS OF CYPHERS INCUBATORS," yet could not furnish me with one. To this date I have not heard from them, or my money either. It seems to me that if they cannot meet fair competition without trifling with the public they should be shown up in our magazines. They tried to sell me a "Model" but "I WANT A CYPHERS," as I have tried a few others myself. Can I buy of you a Cyphers machine, (360-egg size) at a reduced rate, having paid your full 1904 price for my last one? It will be hard for me to make up lost time. Yours respectfully, A. F. ALDRICH.

As a result of the above treatment, Mr. Aldrich sent us an order for a No. 3, 1904-style, hand-new Cyphers Incubator, price \$18.00. In his letter of date Feb. 27th, which contained this order, Mr. Aldrich states:

"I have not heard from my money as yet. I am going to see them March 1st and demand the return of my money."

Free Samples, will be sent by mail, postpaid, to any address. Ask nearest office. Sold by hundreds of agents and dealers located in all parts of the country, many of whom buy in car lots. Write today for name and address of agent nearest you, thus obtaining the Genuine Article and saving time and freight charges. Cyphers ready-mixed poultry foods (Chick Food, Laying Food, Scratching Food and Forcing Food) are put up by us in sealed bags, bearing registered trade mark. See that seal is not broken. Accept no substitute. We challenge comparison and guarantee results when directions are followed. Sixteen-page booklet, entitled "Foods and Feeding" in every page telling how to feed. Please send for free sample, by mail, postage paid.

Six Places of Business. To facilitate the better handling of our business and to SAVE OUR CUSTOMERS TIME AND MONEY, we maintain six places of business, shipping to each branch house in car lots. Inquiries and orders sent to any of these offices will receive prompt attention. All goods will be SHIPPED FROM STOCK DEPOT NEAREST YOU, thus saving you TIME AND FREIGHT CHARGES.

Our 1905 Catalogue is the largest and finest book we have issued. Consists of 228 pages 8x11 inches in size. Contains six Special Chapters on profitable poultry keeping. There are more than 450 illustrations, including latest portraits of 150 best-known authors, judges, fanciers, editors, professors of poultry husbandry and owners and managers of the world's largest and most successful poultry plants. One hundred and twenty pages devoted to an illustrated description of the Cyphers Company's exclusive manufactures, more than 70 valuable poultry specialties. WILL BE SENT FREE, postpaid, to every reader of this advertisement who will send us his name and the names and addresses of two friends or acquaintances who are interested in poultry for profit. Please mention this paper and address nearest office.

P. Harold Hayes, Buffalo, N. Y.

Walter Hogan found out how to pick the hens that lay and those that don't; the pullets that will lay and those that won't; the cocks and cockerels that will breed the best laying strains.

Would you like to be able to select all the good hens in your neighborhood—the layers? Would you like to weed out of your flock hens that don't lay?

The Walter Hogan system teaches you how. It is worth hundreds of dollars to every poultryman—thousands to some. We sell it at a price all can pay. We give a guarantee that makes you safe—your money back if we do not "make good"—and sixty days to test the system. Write today for full particulars to the Walter Hogan Co., 17 National Bank Bldg., Fergus Falls, Minn.

Des Moines, Iowa.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Although not a subscriber to your publication, I purchase it regularly at the news stand and take much pleasure in reading the good things it always contains, but occasionally there is an article which, it does not seem to me, is borne out by the facts. Such a one appears in the March issue of your journal at page 245, entitled "How to Make \$900 per Year From 400 Hens," which appears to be rather misleading.

Before taking up the consideration of this article, let me say that I am engaged in the poultry business and have been, to a greater or less extent, for a good many years, having now a suburban ten-acre place devoted almost exclusively to poultry. I look entirely to the market for my revenue, leaving the fancy to the fancier. I now have a trifle less than one hundred laying hens, but hope to have five hundred another season.

Now, as to the article in question which is based upon the possession of 400 hens: The writer says that from this number of hens one should get 6,100 dozen eggs per year, allowing six months in the year for molting, rest, etc., thus leaving six months for the production of the 6,100 dozen eggs. Now a moment's computation will convince one that in order to get this number of eggs, every hen must lay every day during that six months.

I will admit that the gentleman is conservative in the estimate of the time allowed for molting, rest, broodiness, etc.; in fact I think perhaps four months would cover, or could be made to cover that period. But even allowing the hens eight months in which to produce the stated number of eggs, each hen must lay 183 eggs in approximately 240 days.

Now, in a flock of 400 hens, possibly 100 will do this; another hundred might lay 150 eggs each; another hundred, 100 eggs each and the balance 75 eggs each.

I know the 200-egg hen is a possibility; in fact, I believe she exists in any number, and I also know that my careful selection from year to year, trap-nesting, etc., the laying qualities can be increased, but I do not believe that with any flock of 400 hens, no matter how carefully selected for layers they may be, they will average anything approaching 183 eggs per year per hen. I think 125 eggs per year per hen would be a most fair estimate.

The estimate of the number of eggs reserved for hatching, the number of chicks hatched and the number raised to maturity is conservative and with it I have no fault to find; on the contrary I believe more chicks could be hatched, even with hens, than the gentleman allows in his estimate, for if one-half (200) of the hens incubated, and each had an average hatch of four chicks, the number given (800) would be realized. If this number were hatched with incubators, of which only 500 were raised to maturity, the proposition would be a losing one, for you cannot suffer that mortality with incubator-hatched chicks and come out even. A little figuring will convince any one of the correctness of this statement. One hundred dozen

eggs are worth \$25. It will take five 240-egg incubators to hold them. Each incubator will consume during the process of incubation 7 gallons of oil or a total of 35 gallons, which, at 20c per gallon, amounts to \$7. The 500 chicks will, therefore, cost, hatched, \$32 or 4c each, not counting labor. If this number dwindles to 500 chicks, the cost, including feed, oil for brooders, etc., will average pretty close to 10c each by the time they are three weeks old. From this time on to the time they are broiler size, their feed will cost 15c per chick additional, or a total of 25c each by the time they are ready to market. If marketed at \$4 per dozen (which is the average price here), the margin of profit is practically nil. This estimate is made on the supposition that all feed has to be purchased. Of course if you raise your own grain or a larger portion of it, the cost can be reduced somewhat.

As a part of the profits from these 400 hens, the gentleman contemplates the marketing of the entire 500 chicks raised at 40c each, but he has made no provision for his layers for the coming year (a very necessary provision as it seems to me) and it must be borne in mind that this selection must go on from year to year, selecting the most promising and earliest-maturing pullets for the next year's layers; otherwise the profits to be derived from the sale of eggs will be reduced to a minimum. Of course some of the 400 hens which have proved themselves to be superior layers, will be kept over for breeders, but if one is to select, say 300 pullets every year with which to make up his laying yards, he will have to hatch more than 800 chicks and raise more than 60 per cent of them if he would keep the number of layers up to 400.

Altogether, I think the article and the estimate of profit given therein, misleading inasmuch as, according to the gentleman's figures, it gives a net profit of \$2.25 per hen per year, a profit which I think possible, but by no means probable. Yours very respectfully,

J. D. STEVENS.

Denver, Colo., March 16, 1905.

Here is a method for treating scaly-legged fowls, the credit for which belonged to the late A. A. Pittuck: Take a quart can full of lard, coal oil and crude carbolic acid, and set the can in an old bucket, piling hot ashes and some coals around it. Then, with a swab made by wrapping rags on the end of a stick, proceed to the hen house, and holding each perch over the bucket, sliding it along as you grease, completely fill every crack and crevice with the mixture. The lard cools rapidly, leaving the perch very greasy, and the legs of the fowls roosting on such perches look very bright and clean. It serves a two-fold purpose, ridding the perches of lice and preventing scaly legs.

Prof. W. P. Wheeler believes that early molting is largely an individual characteristic, and can be secured by selection in breeding.

C. O. Brown says bacteria and germ troubles would be less talked about if a proper degree of cleanliness was observed.

CHAS. F. THOMPSON & Co.

LEE'S EGG MAKER AND CHICK GROWER

Should be fed to little chicks after they are two weeks old. It strengthens, builds and brings them to maturity in one-third the usual time. Furnishes bone and sinew and assists digestion. It makes

PULLETS LAY EARLIER

than if they did not receive it.

Mr. Otto Weiss, of Wichita, Kansas, says: "First hatch came off Jan. 13; got eight chicks out of ten eggs. First pullet laid her first egg May 1; others between May 13 and 20. This beats all records I ever heard of. Hatched 200 chicks this season and did not lose one. Used Lee's Egg Maker for both young chicks and old hens. Some hens were laying even while hovering chicks."

It pays well to use Lee's Chick Grower during summer months. The profit in raising chicks is in getting them to maturity quickly. Lee's Chick Grower puts them on a profit-paying basis better, quicker than anything else.

BOWEL COMPLAINT

In summer bowel complaint is the scourge of the poultry raiser — where most of the profit goes. If you watch for FIRST INDICATION of this disease and use LEE'S GERMOZONE you can save all chicks afflicted with bowel complaint and prevent the spreading of the disease. If you let it run, or don't take it in time, you lose them. Sold by dealers or mailed on receipt of 50c.

H. C. HAUSER 633 W. 62d St., Chicago, Ill.

SUNFLOWER SEED IS VALUABLE TO THE POULTRYMAN.

What will help to make hens lay in the winter time is always an interesting question, not alone to the man who makes chicken raising his specialty, but to the farmer as well, and many are the firms that are doing a nice business selling various preparations which are claimed to bring about this desired result.

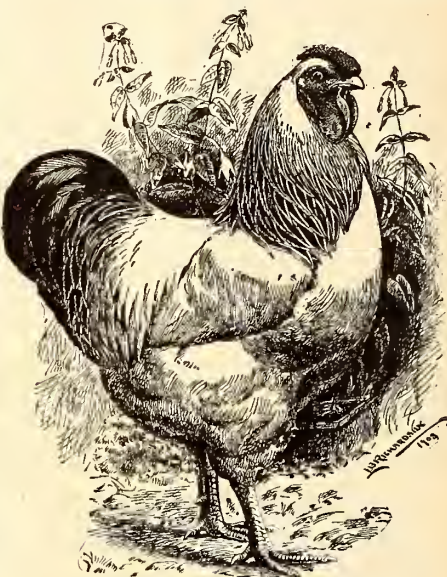

It has been our good fortune to make the discovery that the Creator in His infinite wisdom has furnished us with a plant easily grown and which is a good yielder anywhere in the United States, the seed of which we have found when properly fed certainly increases the egg production; and what we believe to be of equal importance is one of the most valuable aids to the fowls during the moulting period. Our attention was attracted by the birds eating sunflower seed purely by chance, and the discovery thus made was followed up by experiments which fully demonstrated what we now proclaim for the benefit of our poultry brethren.

Some years ago we raised a small patch of sunflowers into which one pen of hens were allowed to run, and as the seeds ripened and fell out were quickly picked up by the birds which at that time had just started to moult. This particular pen moulted in half the time required by those not having the seed and new feathers came in quickly and were more glossy and of better texture than the others; these were stronger and commenced to shell out eggs long before, and in greater numbers than those fed in the ordinary way. A narrative of our various experiments, while it might be interesting, we do not think has a place here, so we will simply state results.

Sunflower seed, giving a full feed four times a week, at the same time using other grain sparingly during moulting time, will bring the birds through in half the usual time, with better plumage and in better health than by feeding linseed meal, cottonseed meal or any other preparation we have ever seen or used, and it is nature's provision—noth-

ing artificial about it. We do not believe in feeding "dope" of any kind. Used as an egg food, care must be taken as the seed is fattening and if fed heavily will throw the fowls into a second moult, which, of course, would be serious. For this purpose we get satisfactory results by giving one full feed of the seed twice a week during the winter time. What we mean by "a full feed" is a handful for each bird.

Now sunflower seed is too expensive

COLUMBIAN WYANDOTTE COCK.

Bred and owned by Hazelmere Poultry Yards, Knightsville, Cranston, R. I.

if you are obliged to buy it, to be used for chicken feed, but it is easily raised and yields as good or better than corn. So most everybody in our business may produce their own. Of course, this does not include our brother of the "city lot plant," who has no room to raise anything but chickens and not much room for that. We plant like corn in checkrows, so that the field may be cultivated both ways, thus avoiding hoeing, which would be necessary if planted

Box A, Hope, Indiana

one way only. After the plants have grown about one foot high we go through and cut out the weaker ones, leaving but one good strong plant in a hill. This is important, as they will not do well if grown together. They should be cultivated until about waist high, when they will take care of themselves until harvesting time. Where large quantities are grown, the heads may be cut off when ripe and run through a threshing machine the same as beans, but where one or two acres only are to be taken care of a very good method is to cut the heads when the

to hustle to fill the orders this coming spring. Sunflowers are valuable in many other ways. The seed is sold in cities for parrot food and put up in neat packages brings fancy prices.

The stock contains a fiber from which rope is made. They also contain a pith which is excellent material with which to make life preservers. The corona or bloom furnishes an oil used as a consumption cure and which is now being imported from Russia at a cost of 60 cents per ounce, and if you want some nice kindling wood just cut up the dry stalks into stove lengths and see what a

seed is dry and nearly ready to fall out, leaving about six inches of the stock on for a handle, and knock the seed out by striking the back of the head (not yours) with a stick. If done at the proper time one or two good raps with the stick will send all the seeds flying out and a good worker can thresh an acre a day. The seed should then be spread out in the sun and frequently turned until thoroughly dry, when they may be run through a fanning mill or winnowed in the old fashioned way, and stored the same as any grain. Last year we supplied seed to poultry raisers in every state in the union and had many orders from Canada, and from the many letters we are now receiving from interested parties it is inferred that we will have

quick fire you can build some cold morning in winter. EDDY & EDDY, White Rock Poultry Farm, Manheim, Ill.

H. W. Collingwood says a bushel of wheat, costing 90 cents, will feed a hen for 300 days. If she lays 100 eggs worth two cents each, she will increase the value of the wheat to \$2.00, which is enough to haul one ton of freight 250 miles, or to haul one passenger 80 miles. After she has done all this she will return 25 cents' worth of the fertilizing value of the wheat to the soil for another crop.

A Brahma is always sharp-breasted unless it is hog-fat, while a Leghorn may be comparatively poor and yet have a plump breast, says Farmers' Voice. The difference is caused by the habits of the two breeds.

Sharple's Tubular Separators

WILL you buy a separator because the agent is a "good fellow"? Some people do. We hope such will read this. The Tubular talks for itself and is bought for itself.

If You Have a Brand New Separator not a Tubular, put it in the garret.

We will sell you a Sharple's Tubular, guaranteed to make enough more butter than the other from the same milk to pay 25 per cent yearly dividend on the whole cost of the machine. You test them side by side.

Pierpont Morgan is hunting a place to put money at 6 per cent; here is a guaranteed 25 percent to you. While this dividend pays your bills the Tubular makes your life more pleasant by pleasing your wife. A waist low milk vat saves your back.

Simple bowl—easy to wash—the only one that is so. Automatic oiling; the only one that has. Easier to turn than others and safer. Catalog A-205 explains better.

DESCRIPTION OF WM. M. GUTHRIE'S CHICKEN COOP.

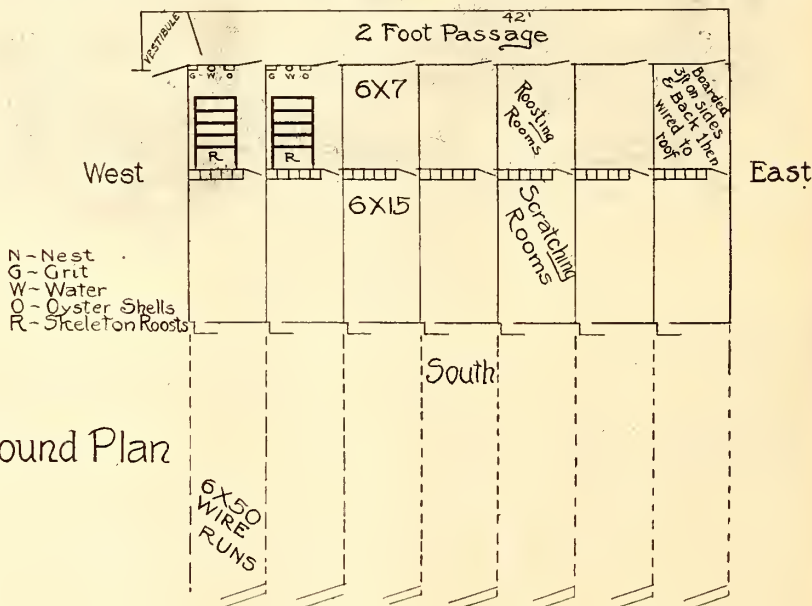

In presenting the design and data of my coop, will commence by saying it is original in its entirety, although being to a great extent composite of innumerable plans. My desire was for a practical house in all kinds of weather, and am

The partition between the roosting and scratching pens is matched pine. The roosting part is double lined with matched lumber with dead air space, except the scratching partition. The scratching room is only lined on the two end walls, although my intention is to eventually line the roof. There is a wooden partition two feet high be-

thoroughly pleased with the results. Lumber being high, economy was practiced as far as possible, but not to any detrimental stage or in any way to cheapen the looks of the structure. The framework was sized 2x4 and 2x6, the casing outside of good Georgia pine, costing \$26 a thousand. The roof boards were matched pine at \$22 a thousand, covered with the best four-ply roofing felt. The

tween the pens except at back where the passageway is, this being three feet high. One-inch wire mesh is used for separating the pens above these boards. Each pen has a cockerel or conditioning pen with floor space 4x2½ feet, wire being used on three sides, with a slat door. Clay was filled in the coop until the floor was two feet higher than the outside; water was poured on and the

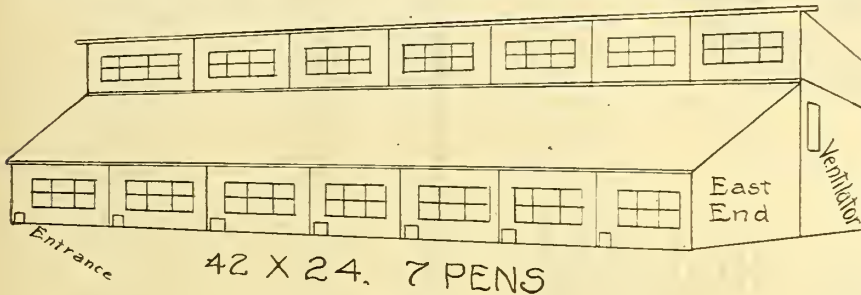

location being selected, we (the carpenter and the writer) built a stone foundation one foot wide and two feet high, forty-two feet long by twenty-four broad with another foundation running through the middle where the roosting and scratching parts were joined. Upon these we placed our bottom plates of two thicknesses of 2x6 stuff. The up-rights were 2x4 placed two and one-half feet apart, the roof being the same.

surface was pounded until it became hard. The roosting section was only filled in 18 inches, the remaining 6 inches being lake sand. The perches are 2x1 inch, rounded edges, and are hinged 18 inches from the ground to the partition, the back supports also being hinged, so that in the daytime the whole roost can be hooked to this partition, and as the supports collapse they do not protrude so as to injure an attendant or offer any

inducement for the birds to fly up and roost on them. The nests are in the scratching room; the water cans and grit boxes being in the other. The mash trough is suspended to the rafters when not in use. The passageway is boarded 3 feet from the bottom and then wired to the roof. To avoid any draft, burlap is tacked on from the top of these boards upward of three feet, as well as the wired part between the roosting pens; this burlap is a great aid both in minimizing colds and preventing the males from fighting between the wires. Note vesti-

is no sudden change at night, insuring immunity from colds in this respect. The birds have a wallowing space of 6x7 with a bath of dry ashes; it is used daily and a louse has a hard time of it in my coop. The doors of the passageway have been opened all day this winter except part of two days when the snow was drifting in. This is a grand feature, especially when the draft is entirely avoided. In summing it up, it is a thoroughly practical house in every respect—lots of good fresh air and devoid of dampness, these being, in my estimation,

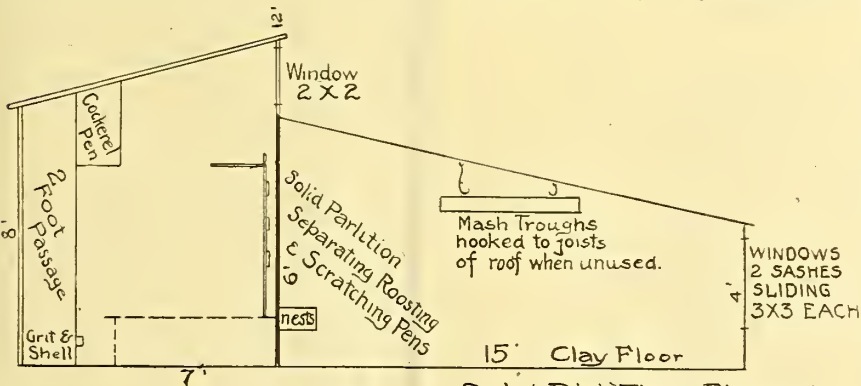

East Entrance South View
Storm door protecting each entrance
so no direct draft strikes the scratching pen

buled entrance facing west. A sweating coop has always been one of my bug-bears, and I have finally solved this. Every day this outside as well as inside door is left open and this has neutralized this dampness, as there is a ventilator in the extreme east end of the passage, thus causing a free passage of air, the burlap preventing any draft whatever striking the chickens. I think this covers the "make-up" of the structure. It is always dry, being elevated from the outside level; warm, the water never

the most essential points of a chicken house.

I have a very practical brooder house, with brooders that brood, made by myself. If you wish, will give you my plans. They are copied after nature—top heat—no bunching or chilling.

The breast and thighs must be heavy in a good table fowl, in proportion to the rest of the body. In order to have thick breast meat and big thighs, these muscles must be used by the fowl, is

Solid Dirt Floors Elevated
2 feet from outside
Stone Underpinned

End View

freezing; light all day long, the two sets of windows lighting both parts. Every available inch of ground surface is used. The birds can wallow in the sand any time, as it is only a minute's work in the morning to rake the droppings up and remove them, hooking your roosts up. In winter we use sifted coal ashes instead of sand. They are always fed in the "littered" part. The outside exits to the runs are vestibuled, preventing any drafts. Almost the whole front of litter room is glass, and this room being partitioned from the other, there

the way Farmers' Voice reasons. In other words, the flyer and scratcher will prove to be the best table fowl, for their lively habits give the muscles of the legs and breast work to do that renders them firm and fine, instead of leaving them flabby and full of loose tissue in the shape of fat.

Convulsion, Fits, then Epilepsy.

Dr. Miles' Restorative Nervine has been so successful in curing these brain-wrecking diseases that there is every reason to believe that even the most hopeless cases can be benefited, if not fully restored.

We will be pleased to refer any one thus afflicted to many who now enjoy the blessing of health, after years of hopeless suffering.

"I have a son that had brain fever when two years old, followed by fits of the worst type, and he was pronounced incurable. I spent hundreds of dollars for him, without relief. After about fifteen years he became so bad that we sent him to Longcliff hospital for the insane, at Logansport, Ind. He was there nearly three years, but he continued to grow worse, so we brought him home July 30, 1902, in an awful condition. He had lost his mind almost entirely. He hardly knew one of the family; could not even find his bed; was a total wreck. He had from 5 to 10 fits a day. We were urged to try Dr. Miles' Nervine, and before the first bottle was used, we could see a change for the better. We have given it to him ever since, and he has had but two very light spells since last August, 1903, and then he was not well other ways. We pronounce him cured, as he can work and go anywhere. If any one wishes to ask any questions concerning this, they are at liberty to do so."

E. H. BUNNELL, Lincoln, Ind.

Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Congress Park Poultry Yards, Congress Park, Ill.

MAKE YOUR OWN GRIT.

Fowls of all ages need grit, but the freight on prepared grit from distant points is so expensive that not many poultrymen can afford to use it. The difficulty can be readily obviated by getting a Humphrey Grit Mortar, by use of which you can easily make your own grit from refuse, stone, broken dishes, etc. In another column appears the ad of the Humphrey Grit Mortar, made by Humphrey & Son, Joliet, Ill., manufacturers of the well-known line of Humphrey poultry appliances, including boue cutters, clover cutters, brooders, etc. It will pay you to send for their new book, "Poultry Helps."

Every manufacturer is pleased when the mail brings him orders. He is more than pleased when these same customers come back to him again and again. It is the strongest kind of evidence to him that his article is one of merit, that the price is right and that the customers are getting exactly what he promised they would get.

It is this kind of satisfaction that comes to Humphrey & Sons, manufacturers of the Humphrey Pure Air Brooder. Where their brooder is once installed they are practically certain to receive subsequent orders. An illustrative case, although by no means an exceptional one, is given in the Humphrey advertisement on this page.

Mrs. Joseph started with four Humphrey Brooders last year, and with those ordered this spring now has twenty-one in all. Not many manufacturers are able to make such a showing. In a letter to the manufacturers Mrs. Joseph writes:

"With the lamp in the center it makes no difference which way the wind blows, but it makes a vast difference when the lamp is at one end. The two rooms is another point of excellence in the brooders. If the hover room accidentally becomes too warm the chickens can escape in the other room and thus avoid overheating. We all had fine success raising our chickens in your brooders and I could not ask for better success than I had, for I think I lost only two out of a hundred chickens which I put into your brooder, and one of those two was not perfectly developed.

Humphrey & Sons claim that it is an easy matter to hatch chicks, but that the difficulty comes in raising them, and this belief is the experience of nine out of every ten persons probably who have gone into the chicken business.

The Humphrey Pure Air Brooder supplies none but pure air and supplies it in such quantities that there are never any odors in the brooder. It does not need an expert to know that pure air is an absolute necessity for young chicks and that the Humphrey Brooder supplies it is shown in the fact that Mrs. Joseph raised ninety-eight out of one hundred chicks, and that one of those that was lost was not a perfectly developed chick when put into the brooder. Our readers will certainly do well to investigate the Humphrey Pure Air Brooder, and we are assured by the manufacturers that every claim they make will be fully carried out to the entire satisfaction of every customer.

August D. Arnold, of Dillsburg, Pa., made the following splendid winnings on his Silver Pencilled Wyandottes at Madison Square Garden, New York, 1905, in which he showed males only, in the hottest competition in America. He won first cockerel; first, third and fourth cocks. The fifth cock and two of the winning females were direct from his stock. Three of his yards are headed by first prize Madison Square winning males, and he has a nice lot of cocks, cockerels, hens and pullets for sale. He also has Buff Leghorns and Columbian Wyandottes, of which little need be said, for they are so well known.

Mrs. Tilla Leach, of Cheneyville, Ill., has quite a number of good Barred Plymouth Rocks, both male and female, yet on hand. She breeds Barred Plymouth Rocks exclusively, and this is an excellent opportunity for breeders to add to their stock at a very reasonable rate.

and practically every exhibition, both big and little, of the season, attests my claim of "the breeder that has made the World's Best flocks possible." We are told that a "cloud of witnesses makes a matter absolutely proven," so this month I am going to add a few more "witnesses" to prove the claim of the superiority of

Duston's White Wyandottes

—, Va., Nov. 16, 1904.
Dear Sir:—The bird arrived all safe and in good condition, and I am very well pleased with it. Many thanks to you for the selection.

Yours truly,

G. W. Y.
Montreal, Nov. 26, 1904.

Dear Sir:—The pen of White Wyandottes duly received in first-class order, and I am well pleased with them. I am,

Yours truly,

R. W. R.
—, Man., Dec. 19, 1904.
Dear Sir:—The birds arrived in good condition. I am very well pleased with them. I am,

Yours truly,

A. G. L.
—, Pa., Dec. 10, 1904.

Dear Sir:—I received the cockerel this evening, and am highly pleased with him. He is in the best of health and condition, and consider that you have done very well by me, so much so that I would like you to let me know what you could let me have two yearling hens for, as mates for him, as I think it would be a shame to mate him to the hens that I have, as he makes them the worst looking scrubs that I ever saw. So have concluded to get two, at least, and begin over again at the beginning, as it will be the best way, I think.

Yours truly,

D. M.
—, Mass., Dec. 28, 1904.
Dear Sir:—The birds came yesterday. To say that I am much pleased does not half express my pleasure. Found one egg this a. m. Yours truly,

G. M. C.

—, Me., Jan. 5, 1905.
Dear Sir:—The birds came all right, and on my return home, January 2, I was glad to find them in the hen house. They are a fine looking pair and I am much pleased with them.

Very truly yours,

R. T. H.

—, Mass., Dec. 6, 1904.
Dear Sir:—The pullets came in good order, and are a nice looking lot. I am much pleased with them. They are doing well. The cockerel is a fine looking bird. I wish to thank you for him, and the extra pullet, which I was surprised to see. They make a pretty sight in their yard.

Again thanking you, I remain,

Yours very truly,

S. W. B.
—, Mass., Dec. 26, 1904.
Dear Sir:—I want a Wyandotte cockerel. I had a cockerel and two pullets of you two years ago. Have the old cock yet. I took 2nd pen in S— with him, scoring 924; pen. 185 2-16: the last pen, 185 13-16. But he is too old to breed from this year. I have some fine pullets from him.

Yours very truly,

W. F. N.
—, Md., Dec. 26, 1904.

Dear Sir:—My birds arrived Saturday in fine shape, and must say that I am pleased with them, and every one that I have shown them to likes them. What could you make two more good pullets for, to add to the pen I just got? Give me a prompt answer and I will order at once. Let me say again that I am more than pleased. So if you can give me two more good ones, let me know the price at once. I am,

Yours,

W. W. B.
—, Mass., Jan. 6, 1905.
Dear Sir:—The cockerel I bought of you is at the head of the Second Prize Pen at B— this week. Yours truly,

H. W. K.
—, Mich., Jan. 7, 1905.
Dear Sir:—Please pardon my delay in acknowledging receipt of bird. Christmas holidays are always such a busy time. I am very much pleased with the bird. He is very much at home now. If ever you come my way would be pleased to have you call and see my

chickens. I would like to have your opinion. If you have one of those club buttons for me, please send.

Very respectfully,

A. M. M.
—, N. J., Jan. 5, 1905.

Dear Sir:—Birds arrived all safely and I am well pleased with them, thanking you kindly for good selection. Will order eggs from you later. Wishing you a prosperous New Year, I am,

Yours truly,

A. B. D.
—, N. Y., Jan. 21, 1905.

Dear Sir:—The trio you sold me arrived safely, and I am very much pleased with them. They have a nice new home and seem to like it. I thank you for sending me such nice birds.

Yours truly,

F. W. S.
—, N. H., Jan. 27, 1905.

Dear Sir:—The cockerel came O. K., and I am well pleased with him.

Yours very truly,

A. W. P.
—, N. J., Feb. 1, 1905.

Dear Sir:—I received the three pullets on Monday afternoon all O. K., and I am very much pleased with them for money sent you. You will hear from me a little later in regard to eggs.

Respectfully,

H. W. R.
—, N. C., Feb. 9, 1905.
Dear Sir:—The bird you sent me is a fine one, and I hope to have some good results from him. Accept many thanks for sending such a nice one.

Very truly,

H. S. W.
—, Ky., Feb. 4, 1905.

Dear Sir:—I would have written to you sooner about the cockerel, but I was busy at the show. I was awarded first premium on him, and there were about thirty other competitors against him. I refused an offer of \$30 for him at the show, and I had several people at the show compliment him.

Yours truly,

T. L. M.

(If A. P. J. would only cut the rate in two, I would make it two or more pages.)

This is the same kind of stock that you want, or eggs that can give it to you. Then why hesitate, for as sure as fate, practically every successful White Wyandotte breeder has come to Duston's strain sooner or later. Why not take a short cut and come at once? A specialist for ten years. Send two-cent stamp for catalogue.

ARTHUR G DUSTON

Box 1020, S. Framingham, Mass.

A CHEAP POULTRY HOUSE.

For an economical poultry house for a small flock I would suggest a style that has proved highly satisfactory to myself.

This consists chiefly of a gable roof as close to the ground as convenience will permit. The lower the house the warmer it will be and the less the cost. The building is twelve feet square, two feet high at the eaves and seven at the peak of roof. The sills are 4x4 and the remainder of the frame 2x4, covered with the cheapest grade of square edged boards. If these are well nailed on, the sills can rot off and the building will yet stand all right. The sides and back ends are covered with roofing

These may be moveable or not, but mine are fastened, as I can as readily oil them where they are as if removed. It don't pay to be too fussy.

Such a house will take about 200 feet of dimensions, 400 feet of boards and 350 square feet of roofing paper; or, if shingles are used, 2½ M shingles, and any one who is at all handy with tools can build it. The cost will be from twelve to fifteen dollars besides the labor. It will accommodate about eighteen hens. If twice that number are to be provided for, have the house twice as wide, divided in the middle into two pens 12x12, and have the perches and dropping boards against the dividing wall.

When there is opportunity to build a

I put boards down edgewise, about a foot below the surface, under the walls of my houses, to keep out skunks, but it is better to dig a trench a foot deep and fill up with small stones, if one has them handy. This makes a good foundation for the sills. If one had a board floor it would not be necessary to do either, but the ground is better and cheaper, although the floor is easier to keep clean. I have both and find that weak legs are more often found in the pens having floors. WM. B. GOULD.

Hillsboro Bridge, N. H.

The Patented Peep-o'-Day Brooder, Manufactured by the Cornell Incubator Manufacturing Co., Ithaca, N. Y., U. S. A.

It is not extremely difficult to obtain a satisfactory hatch, as there are several good incubators on the market today. The real trouble begins after the chicks have been transferred from the incubator into the brooder, and unless one is the fortunate possessor of a Patented Peep-o'-Day Brooder look out for breakers ahead!

The Peep-o'-Day Brooder has been very appropriately named the "Chick Life Preserver," as it is the only brooder every devised that will bring to rapid and successful maturity every healthy chick that has originally been placed in its care.

The Castiron Peep-o'-Day Lamp will neither blow out nor smoke, no matter what the weather conditions may be. The heating and ventilating systems are so perfectly understood that they afford the little chicks more solid, clean comfort than under the mother hen.

The Peep-o'-Day Brooders have been on the market for nearly a generation, and we say to you truly and sincerely we have yet to receive the first complaint! A wonderful record that will never be duplicated by any other brooder in existence.

The Peep-o'-Day Brooders are manufactured in eight different styles, ranging in price from \$5 to \$16 and of a capacity of 50 to 100 chicks. Our latest invention is the 1905 Combination Brooder and Colony House Combined, built on runners. It is a machine 6 feet long, 3 feet wide and 4 feet high in front and will take care of the chicks from the time they are hatched until they acquire the dignity of pullet and cockereldom and are removed into winter quarters. It is transformed into a colony house by simply slipping out one partition. Last but not least the house is built on runners and can be easily pulled to fresh ground and new sweet grass, so essential to the growing chick.

We will mail you for the asking our catalogue, fully describing our Peep-o'-Day Brooders and also the 1905 Cornell Automatic Moisture Incubator, the most perfect machine that has ever been placed on the market.

The catalogue of Doolittle's Partridge Wyandottes has been received at this office. Mr. W. A. Doolittle is located at Sabetha, Kan., and has been very successful with his Partridge Wyandottes. The catalogue is a very unique one and bound to claim attention and admiration. A circular space has been cut out of the front cover, through which can be seen a colored picture of Duke, one of the most typical male birds of this variety ever bred. On turning the cover page the full page colored picture of Duke and Duchess then appears. This is a very novel arrangement, and Mr. Doolittle has been congratulated very highly on same. The catalogue is printed on a nice quality of buff paper and is full of splendid reading and descriptive matter of his yards and fowls, including also prices on his stock and eggs.

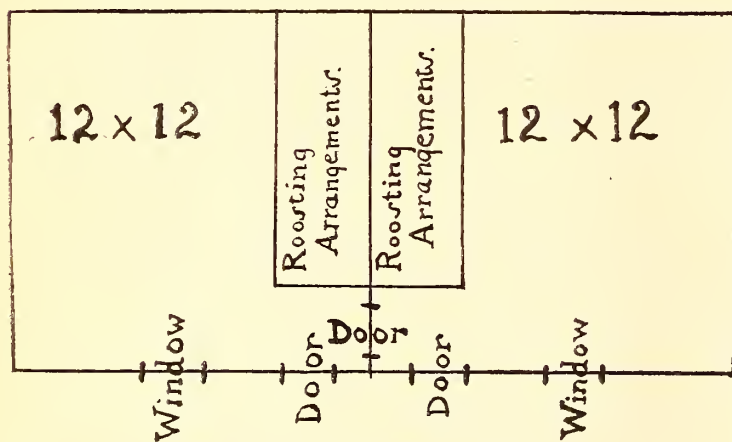

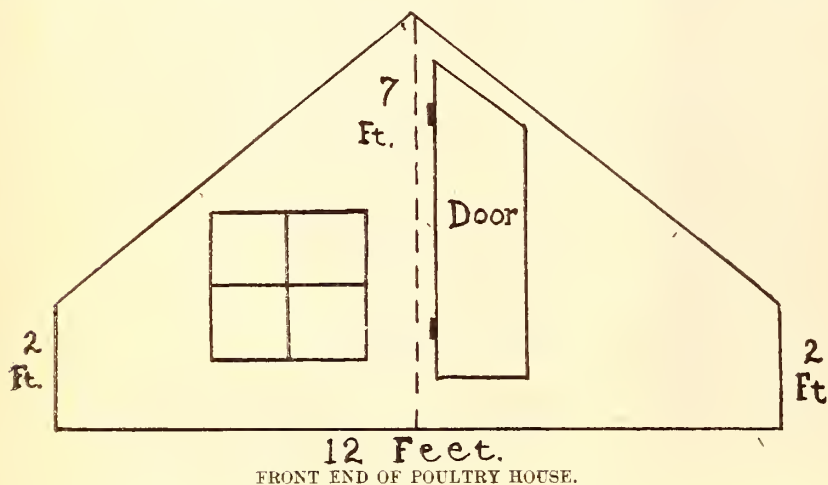

Standard Poultry Food Greatest stimulating tonic known, inducing health, vigor, eggs and profit. Sold by dealers. If not there send for special trial offer. Standard Stock Food Co., Howard St., Omaha, Neb.

Alfalmo Poultry Feed

A complete balanced poultry feed—Alfalmo Meal, meat products, bone, charcoal, etc. Sample free. ALFALFA MEAL CO. 1632 Farnam St., Omaha, Neb.

paper. Shingles might be used instead of paper if they were cheap enough. It faces the south, and this end is not covered with the paper, as, if it were, other means of ventilation would have to be provided. The door is in the front end and also a window as large as space will permit. This can be removed easily, which is done early in the spring, and it is then left out all summer. Poultry netting covers the inside of window, making the pen much lighter than slats. I have a slat door to use when the other one is open, as it is on all pleasant days in winter and day and night through the summer. A dropping board three feet wide extends across the back, each end resting on the plate and supported in the middle by a bracket fastened to the wall. About ten inches above this are two perches.

leanto on the south side of another building this, of course, can be done cheaper than to build a separate house. It may be ten feet wide and as long as the building to which it is attached, having the front side three feet high and the back seven. Have the door in one end, up next to the adjoining building, and one or more windows in the south side made to slide sideways. One window for each eight or ten feet of front will be enough. Don't have too many for, while they will warm the pen up in good shape on a sunny day, it will make it just as much colder through the night. I tried it before I knew better, but now the windows in that pen are all boarded up but one. Have the roosting arrangements against the back side, about two feet from the ground.

RAISING YOUNG CHICKS.

There is an old saying that "Necessity is the mother of invention." After a machine had been invented that would successfully hatch out chickens, the next question was to know what to do with them after they were hatched. Ingenuity again proved equal to the occasion and the brooder was evolved.

Improvements on both incubators and brooders have succeeded each other until at the present time these artificial mothers answer the purpose fully as well as the hen, and in some respects better. The Shaulb Compartment Brooders have stood the test of time and are equally good for indoor or outdoor use. The increasing sales of these machines speaks well for the satisfactory results obtained by their use. They are so constructed as to provide natural conditions for the chicks, and during the ten years they have been on the market have met with great success.

The prices are reasonable and a free booklet describing the brooders may be secured by writing to the manufacturer, M. O. Sherer, Louisville, Ohio. His advertisement will be found on page — of this issue.

George O. Anderson, Rushville, Ind., breeder of Barred Plymouth Rocks, Light Brahmas and Mammoth Bronze turkeys, is advertising eggs for hatching this month from his prize-winning pens. Mr. Anderson has had twenty-two years' experience in breeding and mating thoroughbred poultry and knows how to mate for best results. He sells eggs from the same yards that he breeds from. He has won prizes at the leading shows of the country and many of his prize winners are now in his breeding pens. Send for his circular, which gives prices and other information, and mention AMERICAN POULTRY JOURNAL.

George P. Hartman & Son, Freeport, Ill., with commendable enterprise are running a large ad of their Glenwood Poultry Farm in this issue, describing their many varieties of fowls that they have for sale for the information of those who are looking for choice birds. They have been very successful in securing premiums this fall and have many winners in their yards. They have hundreds of choice birds to sell eggs from, from their many varieties. Their illustrated catalogue will be sent for 10 cents. This describes all their varieties and gives prices on stock and eggs. They are confident that they can please all customers and assure fair treatment to every one. Their sales are made with a strong guarantee. Their list of fowls includes thirty of the leading varieties of farm raised land and water fowls.

Frank L. Riffert, Box A, Haubstadt, Ind., the noted breeder of prize winning Black and White Langshans, offers eggs for hatching from his prize winners. Parties wishing new blood will do well to write to him. Look up his ad and write immediately.

A GOOD LITTLE POULTRY BOOK.

We take pleasure in directing the attention of our readers to a little book before us, entitled "Proper Care and Feeding of Chickens, Ducks, Geese and Turkeys." It is published by the Des Moines Incubator Company, Des Moines, Iowa, and is sold for 10 cents a copy. No reader will begrudge the small price to get the accurate, specific information which this little book contains. It is in neat, compact form and gives directions and pointers in a way that they will be applied every day by the poultry raiser. The different classes of fowls are treated separately. Particular attention is given to right starting, the foods that are adapted and those not adapted to the new born fledgelings. It is an especially valuable book for beginners. Old poultry raisers will get many valuable suggestions from it. A copy may be secured by sending 10 cents direct to the publisher.

The A. Edward Green Company, of Morgan Park, Ill., is sending out a free circular describing their Cook strain of S. C. Buff Orpingtons and their Wooden Royal strain of Buff Wyandottes and their Indian Runner Ducks.

Mr. Green is conveniently located in Morgan Park, which is a suburb of Chicago. He aims to have his stock well up to and a little above his claims and letters from his customers bear him out in this statement. His poultry business is a limited one and is conducted only as a recreation from the continuous office duties in the city. He aims chiefly at quality and moderate prices, selling his stock at much less than others of similar quality.

He has in his yards the Buff Orpington cock that has won second prize at Chicago, 1904, and is constantly mating to produce birds that will make good layers

and good broilers. His Royal Buff Wyandottes are well known and he uses the same intelligent care with them and he has had great success with his Indian Runner Ducks. A strong guarantee goes with every shipment made by this company.

We have received a copy of the catalogue of J. M. Williams & Co., North Adams, Mich., the Buff Orpington breeders. Very few Buff Orpington breeders are better known than J. M. Williams & Co. Their catalogue is beautifully illustrated and printed and every Buff Orpington breeder should have a copy in order to take advantage of the rare bargains that these people are now making. They breed S. and R. C. Buff Orpingtons of the famous Whittaker strain. They desire especially to call the attention of their old patrons, also new prospective customers, to the great improvement they have made this past season on their Whittaker strain. The low, blocky type bird, which their strain is noted for, is becoming more and more a permanent fixture. The true Buff color, both in surface and under color, is found in their birds, where only a short time ago black and white predominated, especially in wings and tail of male bird. This has disappeared and buff has taken its place.

Mr. F. H. Stanwood, 433 North Harvey avenue, Oak Park, Ill., breeder of exhibition and utility Barred Plymouth Rocks, has ten well-mated pens, which include all prize winners at the late Chicago show, passed upon by some of the best judges in America, namely, Hewes, McClave, Shirlabarger, Russell, Lambert, Brinkman, etc. Mr. Stanwood sells his eggs reasonable, considering the quality of his stock. Only \$2.50 per setting. Any one interested should write him and no doubt one will get his money's worth.

Hovers 'em Just Like The Old Hen

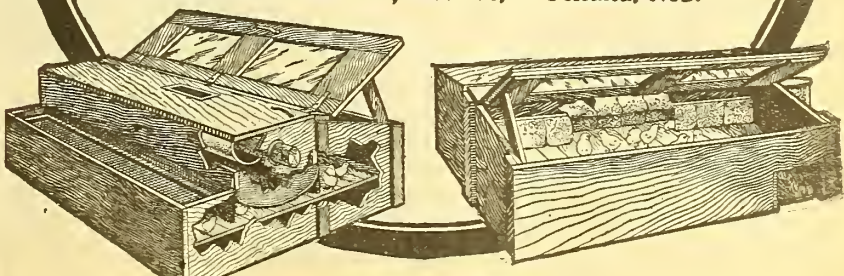

That's the Secret of

the "Mandy" Lee Brooder. It puts the heat right on the spot where the young chicks need it—on their backs—right where they get it from the old hen. It furnishes direct contact heat and in the natural, hen-like way, the only way to insure natural results. The chicks get it where they want it, when they want it, and just as much or little as they want. They can have their heads out in the fresh air this brooder supplies at all times, and have their backs against the warm hover. No wonder they live, thrive and grow fast in

THE "Mandy" Lee BROODER

What's the use of hatching chicks if you can't raise them to the profit-bringing point? There is not a brooder built that will raise one-half as many chicks to maturity as the "Mandy" Lee. Why? Because they are not built upon nature's lines and the "Mandy" Lee is. It comes so near to nature's way that there's nothing omitted but the old hen's "cluck." Write for circular giving full detailed description and illustrations showing how the "Mandy" Lee does it. Does it is so different; so much better, yet costs no more than the poor kind.

GEO. H. LEE CO., Box 71, Omaha, Neb.

THIS YEAR'S CROP OF CHICKENS.

It Is Most Important to Start Them
Right and Equally Important to
Keep Them Growing Right.
How We Hatch and Grow
Our Layers.

BY CHAS. F. THOMPSON.

Every spring we all make a new beginning with our poultry work. We start out then with a new flock of youngsters, which are to grow up to be our layers and breeders, and we have then the one great opportunity of the year to work out a better success in our

this we will make a steady advance in our poultry business, each season will show a step forward.

It is of the utmost importance that the breeding stock from which the chicks are to be raised shall be of the very best possible, shall be well equipped with strength and vigor; taking particular pains with the birds that lay the eggs from which the chicks are hatched is half the battle,—the old adage that "well begun is half done" applies with especial force to our chicken work. The breeding stock transmits to the offspring its own strong or weak qualities, hence it is up to us to see that the right qualities are transmitted!

with the chicks. Healthy birds, rightly cared for, will produce strongly fertile eggs, and the chicks hatched will grow even under unfavorable conditions, while unhealthy hens and pullets, that have been "forced" into early laying, will produce eggs a large per cent of which will be infertile, and what chicks are hatched will not grow into strong, vigorous stock.

We make it a point to keep our breeding birds from laying too early, and to do this we keep them out in the open, unhoused until the weather becomes quite severe. Birds not intended for breeders we house early in the fall, and from them we get eggs for market when

Front and side view of one of our Wyandotte cockerels, broad, deep breasted, short, yellow legs and perfect head. Prize winning strain. Bred and owned by Charles F. Thompson & Co., Lynnfield Centre, Mass.

poultry; or we may take a backward step, possibly take a step towards ultimate failure.

The chickens hatch and raised each year furnish the test of our work for that year. In them and the development they make is the key to the forward step we all want to take, hence it is of the greatest importance that we start them right, and keep them growing right, to the end that they are fully equipped with the qualities essential to success; and not only that, but to a success better than that of last season, or better even than we have made before. By doing

We on our farm want the birds to be great layers, hence we select for the breeding pens only such as we know to be great layers. Here, at the very outset is where many make a mistake and start wrong. They get the idea that all they have to do is handle the incubators right, or take good care of and feed well the chicks after they are hatched. They cannot see that if they have the right kind of laying-breeding stock the chicks will pretty much take care of themselves. If more of our poultry growers would take the greatest pains with the parent stock they would have little difficulty

prices are highest. By experimenting with these eggs we have found that they are not strongly fertilized, or the eggs themselves are not of good "body," and these eggs will not (cannot), hatch as strong chickens as will eggs from the breeders that have had a good rest through being held back from laying. Last season we had eggs from these selected breeders test 91 per cent fertile, and in our own incubators hatched as high as 85 per cent. This we consider remarkably good results, but we could not get such results without taking especial pains with the breeding stock.

Another point where many fail is in feeding the chicks too soon. We believe chicks should not be fed till they have been out at least forty-eight hours, and from reports coming to us from customers who live at a distance (to whom we have shipped newly hatched chicks), we have come to firmly believe that chicks may be three or four days old before feeding, and suffer no harm from the delay. When we do begin to feed them we feed lightly, with cracker crumbs and dry bread crumbs, and about five per cent of chick-size grit added. Here, again, is where many make a mistake, in not giving the baby chicks fine grit, with which to "chew" their food. The first food should not be a too concentrated food, such as the hard-boiled egg some writers advocate. "Milk for babes" is a good motto, and light, simple food for baby chicks is equally important. The

light feeds of bread and cracker crumbs seems to be just about right, and being cooked food it is easily digested.

We feed the chicks four times a day, regularly, until they are well grown. One meal is of Johnny cake and stale bread, crumbled,—about half and half of each; one is of cooked rice, which we consider an excellent chicken food; one is of cracked wheat or wheat screenings, the cracked wheat giving way to whole wheat by the time the chicks are three weeks old; the other is of Spratt's Patent chicken feed. When two weeks old finely cracked corn is given at one of the feeds, and by four weeks old we begin to feed a cooked mash. This is composed of equal parts corn meal, "mixed feed," and ground oats, mixed quite dry and steamed for an hour, and this is fed twice a day. Unless, as sometimes happens, the mixed feed is not of extra fine quality, one sixth in bulk of fine middlings is added.

They get green food in the shape of clover meal and chopped cabbage when three or four days old, and this is continued until they are put out onto a grass run. The green food is quite important, keeping the digestive system in good tone and preventing indigestion. This last trouble, which is a most serious trouble to many, is largely caused, as we believe, by feeding a too concentrated ration and by lack of green food and fine (chicken-size) grit. If these are supplied there will be little difficulty with "pasting up behind," which is due to indigestion or impaired digestion, and the chicks will thrive and grow very much better.

We also feed fresh meat, boiled and chopped fine, after the first few days. They are fed but little of this at first, and but a little green food at first; the quantity of both is gradually increased as they get older. Over-feeding is carefully avoided, only enough is fed each time so that the chicks will eat it up quickly. If any food is left after ten minutes or so we remove it, and it is well to pass that flock the next time of feeding, as it is probable their appetites are cloyed by having eaten too much. It is good for little chicks, and chicks that are older, also, to get a bit hungry and move around lively in search for food; it is well known that exercise promotes good health.

We move the chickens out onto grass range as soon as they are large enough to no longer need artificial heat; here they find ample green food and get full supply of fresh air and exercise. Plenty of room in the roosting coops, or small colony houses, is a prime necessity; chickens cannot thrive and grow well if they are uncomfortably crowded in their coops. If these points are kept in mind, and the chicks are hatched from eggs that are right, they will grow up into birds that are right, and that there is some comfort and satisfaction in owning. Start them right, keep them growing right, and they will be all right,—then the profits will be right!

THEO. AMBROSIOUS

Collinsville, Illinois

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

**SENT ON TRIAL
Anywhere We Pay Freight
No Money in Advance**

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by any ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

FINE OPPORTUNITY FOR FARMERS

In another column the Norfolk & Western Railway offers an exceedingly attractive proposition relative to productive farming lands, well located near thriving towns on their line, having good social, church and school advantages, and excellent shipping facilities to the large markets of the Atlantic seaboard. This railway company is making strenuous efforts to develop these old Virginia farms and plantations, which have fallen into neglect since the war, and have already succeeded in inducing a large number of Northern and Western farmers to come down and locate. If you will write Mr. F. H. LaBaume, Agricultural and Industrial Agent, N. & W. Ry., Box 22A, Roanoke, Va., he will take pleasure in sending you a full assortment of attractive literature setting forth the many advantages of that section of the country, with testimonials from farmers already located there.

We call attention to the ad of Smith & Arford, of Oakwood Poultry Farms, Marshall, Ill., who are breeders of high-class White Wyandottes and Single Comb White Leghorns. They offer this month and the next Wyandotte eggs at \$1.50 per setting, \$7.50 hundred, and they will make for the same time a special cut rate on Leghorn eggs of \$1 for 15, \$2.50 for 50, \$4.50 per 100. They write us that their motto in breeding is vigor of constitution, white plumage and beauty of form. That is, the raising of stock, which combines with utility requirements, the requirements of the show room. They give their personal attention to their business, keep down expenses, and are thus enabled when offering stock and eggs to make extremely low prices.

The Excelsior Wire & Poultry Supply Company, 28 Vesey street, New York City, have a change of ad this month, announcing their Banner Chick Food, and state that this is the best food for little chicks. When fed on this food for the first six or eight weeks they grow very fast and strong. It is a complete food, but no grit or oyster shells. You add that yourself. They send their new 208-page catalogue free, if you mention Department O when writing them.

In this age of enlightenment there is no excuse for the land owner who does not grow fruit. Eating fruit tends to preserve health and to prolong life; fruit is not a luxury but a necessity. There is always a profitable market for any surplus fruit which may be produced, and no business yields greater returns from the amount invested than that of fruit growing.

We desire to call attention to the advertisement of J. F. Dayton, Waukon, Iowa, who has for thirty years carried on the Highland Nursery at that place.

He has never employed any agents, but sells directly to the planter, and hence is enabled to offer standard varieties of Strawberry Plants at Two Dollars a Thousand, furnishing only strong, vigorous plants from new beds. Write to him for his Twenty-fifth Annual Catalogue. It is Free.

M. L. O'Neel, of Oelwein, Ia., writes that Shellabarger scored his White Wyandottes in February and gave one of his cockerels the highest score he had given this year, and said he would improve later. He is using especially white males in his breeding pens this year, four of the cockerels not being cut for color of plumage, and still bas in his yard his prize winners of 1904. He could not leave home this winter, so did not show. He has had some remarkably good sales this year, his cockerels going fast, but he has fifty pullets left and a lot of extra good yearling hens.

E. J. Rood, of Webster City, Iowa, breeder of Rose Comb Rhode Island Reds exclusively, writes that he positively has no more birds for sale, but has mated up two small but magnificent pens, one of Rose and one of Single Combs, for the egg trade.

MAILED FREE ON REQUEST
W. J. Gibson & Co., Inc. Rialto Bldg. Chicago.

Editor AMERICAN POULTRY JOURNAL.

"Figures won't lie but liars can figure" is an old adage and it will apply to the poultry business admirably.

I would like some information in regard to feeding poultry. Poultry books and journals tell us we can keep a Plymouth Rock for one year for one dollar to one dollar and twenty-five cents.

I find a fair ration for above breed to be four oz. soft feed and one-half pt. grain per day with wheat at \$1.20 per bu, corn at 55c and oats 45c. the average cost per bu is 73c and to keep a hen a year it would require 2 27-32 bu, which would amount to \$2.07 with bran and middlings and meal selling for \$1.10 per hundred it would cost \$1 per year for each hen, for boue, meat and disinfectants 25c per hen. This makes a total of \$3.32 per hen. I figure the clover and other green material feed to be offset by the value of the droppings.

With eggs at an average price of 20c per doz. it would require a 200 egg hen to pay for her board and you would have left for profit and labor the value of the hen which would be from 50c to 75c, but it is a very few flocks of hens that will average 200 eggs per hen. I think we would be safe to say the general average of large flocks would not

exceed 150 eggs per hen, such being the case where will the poultryman come out?

Where ever you read of large profits being made in the poultry business you will see the cost of feed ranging from 75c to \$1.25 per hen and to the poultryman who has succeeded in solving the feed question so he can keep a hen one year for \$1.50 he has a business that will equal the dividends of the Standard Oil Co. in proportion to capital invested. I might add to above providing he keeps up the egg average to 150 eggs per hen.

The foregoing is as I find the conditions to exist. Now is it possible to keep our American breeds for \$1.50 per year each and keep up the egg supply? If so how and what would you feed?

The above question stands between profit for many poultryman.

SURE HATCH SUPREMACY

Remarkable Results of Scientific Incubator Making and a Liberal Selling System

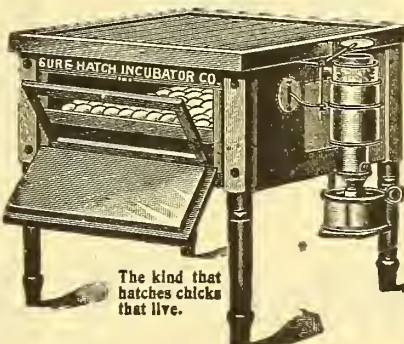

60 DAYS' TRIAL

Freight Prepaid. Our Guarantee Backed by \$100,000 Cash

It is one thing to claim superiority for your product and quite another to prove it. The Sure Hatch Selling System proves it or No Sale.

Over 60,000 Sure Hatch Incubators are in use throughout the United States. These machines were sold with the return privilege, and every one of them stood the test of actual use.

A Sure Hatch Incubator is a money-maker for its owner and a trade-winner for us. It hatches more chicks that will live and grow to the 100 eggs than any other incubator made. That is the secret of the wonderful growth of our business. There's all the difference in the world is the various makes of incubators.

The kind that hatches chicks that live.

The Sure Hatch keeps its place at the head of the list, because every machine we sell is so well made that we are willing to stake our reputation and our money on the results it will show in operation. Take the matter of material. We found by extensive tests that the best wood to use in incubators is redwood. Consequently we build our machines of clear California redwood, and we know they will never warp or crack, shrink or swell. We make the tank and heating pipes of copper because it practically lasts forever. We use asbestos lining because we want the best non-conductor of heat or cold. Some so-called incubators are simply thrown together in the quickest and cheapest manner possible. Sure Hatch Incubators are carefully made by expert workmen in the largest incubator factory in the world, with the aid of the most modern machinery. They embody thoroughly scientific principles. The Sure Hatch water Heater has 139 square inches of heating surface, and only a small fraction of it is outside. Heats quicker and at less expense than other heaters.

The eggs are heated from the top, by air that is kept automatically at just the right temperature. 30 cents worth of oil is enough for one hatch. 30 cents worth of time is a liberal allowance for necessary care.

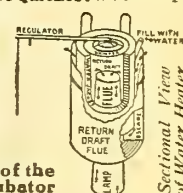

We offer on 60 Days' Trial, Freight Prepaid, east of the Rocky Mountains. Our 100-Egg Sure Hatch Incubator (actual capacity 120 eggs) guaranteed five years.

Send \$10.00 and we will ship the machine at once. Money will be refunded if not absolutely satisfactory. We can make quick shipment. If you live east of the Mississippi River, address Indianapolis, Ind. If west, Clay Center, Neb. Our big Free Catalogue now ready. Invaluable hints to poultry raisers. Get a copy. Write us at once.

EDITOR AMERICAN POULTRY JOURNAL:

I note with amusement the very conservative figures Mr. Edwin W. Fly gives in his article on "How to make \$900 per year from 900 hens." Most of his figures are in the range of possibility, but what poultryman has a flock as large as Mr. F. figures on average 183 eggs each.

Let us stop and consider in this flock of 900 head there are (must be we might say) three classes of layers: the extra good, the good and the poor, to meet this average the first named must lay 200 eggs each and perhaps more. The next best 150 or better, while a good per cent of the last named class will lay about enough to pay for their keep. I have known individual hens to lay over 200 eggs in 12 months, but what man can truthfully say he has even 150 hens that average him that number of eggs in 12 months. I have devoted considerable time and study to increase the egg producing quality of my fowls (an American variety), but the best I have done was an average of 177 eggs each in 12 months. From a pen of four pullets poultry farming can be made to return large incomes on paper. This is one of the rocks on which one-half the amateur barks are wrecked. They set down and figure it all out or see some other fellow's figures and jump into it all over. Go slow and learn by experience, not figures. There's no gold mine in the

poultry business, but a good living and some to lay by for a rainy day, if handled properly.

E. MILTON HALPIN.

Mortimer, N. Y.

EDITOR AMERICAN POULTRY JOURNAL:

The following report of the first three months of the Kansas Laying Contest may be of interest to your readers.

Five varieties of fowls are entered and on January 31, 1905, stood as follows:

American Reds have led from the first, all six birds laying. The close of this first quarter probably marks a period of the contest as they are now molting, but so far the only bird to approach their record is Wyandotte pullet No. 4011, who, during one month, equalled the best month's record of the best Red—24 eggs.

R. C. W. Leghorns are next with all six laying. They are making a fine record in low cost production.

White Wyandottes stand third with three birds laying.

Barred Rocks are next with only two birds laying.

Light Brahmas are last with three birds laying.

In the table following the pen comparisons come first, followed by a comparison of the best individuals. There is quite a difference in several particulars.

Pen comparison, totals for three months:

	Eggs.	Feed.	Feed.	Egg
		lbs.	value.	value.
Am. Reds . . .	214	183.6	\$1.81	\$2.50
Leghorns . . .	145	168.8	1.64	2.43
Wyandottes . .	81	187.2	1.85	1.36
Rocks	51	202	2.06	.85
Brahmas	25	200.3	2.03	.42

White Wyandotte Eggs

From the "Original World's Best" Strain

of J. C. Fishel & Son

Now is the time to buy eggs. Prices on eggs. Prices \$5 per setting of 15 eggs, of 50 eggs for \$15, selected from that yard. Now if you wish eggs from a special yard the price is \$10. See catalogue. We can ship eggs any distance with perfect safety and guarantee hatch. Our matings for this season will simply be immense—fourteen yards, and not a bird that shows a tinge of brass or straw color. They are absolutely white, stay white, and are all winners. Note our winnings in catalogue, and also our last show of 1904; is not that proof of our claim, "THE WORLD'S BEST?"

At the Indianapolis State Poultry and Pet Stock Show, 1904, winning seventeen prizes out of twenty-one entries, besides \$25 silver cup given by White Wyandotte Club for best display; W. Wyandottes and many other specials; 1, 2, 4 cocks; 1, 2, 3, 4 cockerels; 1, 2, 4, 5 hens; 1, 2, 4, 5 pullets; 1, 2, 3 pen. Now is not that convincing evidence that Fishel's Strain of Stay White Wyandottes are the original world's best? If your stock lacks in head points, pureness of color, or the typical Wyandotte type, you should certainly improve your stock. This you can do by making a small investment in eggs with us.

OUR GUARANTEE: We guarantee nine chicks to each setting of fifteen eggs, or if the purchaser fails to get this per cent, we will duplicate the order at one-half price. We feel that any of our customers having the confidence in us to place their orders with us, we should have equally as much confidence in them to take their word for report of hatch, hence this proposition.

Send for catalogue or order direct from this ad.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

NATIONAL SINGLE COMB BUFF ORPINGTON CLUB.

It will undoubtedly be interesting to all poultrymen, especially breeders of Buff Orpingtons, to know the rapid progress the National Single Comb Buff Orpington Club has made in the short time it has been in existence. The club was organized last August and in less than five months of active service has passed the 100 mark and at this writing is receiving members every day. The club is in receipt of letters daily from members setting forth the benefits and pleasures derived by becoming members of the club, and especially from those who have been fortunate in winning the club's silk trophies or silver cup.

During the coming show season the club will offer a handsome silver cup in every state where they have ten or more members, the show at which it will be offered to be decided by vote of members in said state. As there are numerous states that will still lack a few members of having enough to compete for the silver cup, it will be to the interest of every buff breeder who is not now a member to join at once as the voting will take place early in the fall. The club will also continue its policy of offering their elegant silk trophy to any member winning a first prize at any poultry show where there is two or more competing in the same class. These trophies are said by all who have won them to be the finest and most expensive

ever offered by a specialty club.

The club will soon issue something entirely new in the way of a club catalogue and will give each member a space in the catalogue free of charge, consisting of their name and address. This advertisement alone will be worth more than the membership fee amounts to, and all breeders who contemplate joining are urged to do so at once that they may be enrolled in our catalogue.

The club membership now consists of nearly every breeder of note and those that are not now members have expressed their intention of becoming members at an early date. We cannot recall any other club that has made such rapid progress in so short a time, there being hardly a state or territory in the Union in which we are not represented. The membership fee of the club is \$1 and annual dues of \$1, but in order to secure a large number of new members before we issue our catalogue we will receipt all new members to October 1, 1905, and include membership fee for \$1. Besides this, you get your name in the club's catalogue, which you cannot afford to miss. For application slips, circulars and full information of the club, address the secretary.

will be known as the Oconomowoc Poultry and Pet Stock Association, and it was determined to hold an exhibition the coming winter. The association has a charter membership of nearly fifty and from the encouragement with which the plans of the association are meeting, it is believed the membership will be doubled by show time. The membership fee is \$2 and the annual dues \$1. Outside breeders of poultry and pet stock are invited to join the association. Applications may be made to Dr. H. J. Larson, corresponding secretary, Oconomowoc, Wis. The officers of the association are: President, R. H. Poston; vice-president, Charles Brent; corresponding secretary, Dr. H. J. Larson; treasurer, H. C. Behrend; show secretary, H. E. Rosenow.

ARTHUR C HATHAWAY.

Oconomowoc, Wis.

WISCONSIN STATE POULTRY SHOW.

The eighth annual exhibition of the Wisconsin State Poultry Association was the largest and most successful ever held in the state. Birds from all parts of Wisconsin were exhibited, and the large Armory building at Oshkosh was filled with birds of high quality. Many fanciers were present, making the show more pleasant to all. From a business standpoint every exhibitor must have been satisfied, for over 100 birds were sold during the show. Oshkosh is one of the best of sales towns. Because of its central location and superior railroad facilities, many buyers are in constant attendance looking for the best. Judge Shellabarger placed the awards.

Barred Plymouth Rocks were the largest class, 125 birds being shown. The quality was right up to the quantity. White Rocks were out in force, among them birds fit for the keenest competition. The Buff Rock class was very small, but some good birds were shown. In White Wyandottes there was a class of the very finest specimens. One exhibitor had something of a walk-away, but this was due to the superior quality of his birds, not to the poor quality of the others. Silver Penciled Wyandottes, Buff Wyandottes, Partridge Wyandottes and Silver Laced Wyandottes were well represented. As usual the Black Langshan class was large and strong, partly due to the Langshan club cup offered here. The Bantam class at Oshkosh is always a large one, and this year was no exception to the rule. Other large and meritorious classes were, Cornish Indian Games, Single and Rose Comb Brown Leghorns, Single Comb White Leghorns, Light Brahmas, Rhode Island Reds and Black Minorcas.

The show next season will rival even this one in scope. Full particulars concerning it will be published later.

FRANK W. RADFORD, Secy.

Oshkosh, Wis.

The first annual exhibit of the Butler County Poultry and Pet Stock Association, held at Butler, Pa., Feb. 8-11, 1905, was a decided success, both socially and financially. The association is now preparing for a much larger show next winter.

It saved his chickens

Pratts Powdered Lice Killer.

Made by Pratt Food Co., Phila. Over 30 years old.

MIDSUMMER SHOW.

The Western New York Fanciers' Association will hold their second summer show at Celeron, N. Y., June 20-24, 1905.

Celeron is a summer resort on Lake Autaugaqua, two miles from the City of Jamestown, and is connected by a first-class system of electric railways, also by a line of excursion steamers. The location is simply perfect and there is no place that we know of where mid-summer shows can be held to such good advantage. The lake is well up in the hills and the weather during the middle of June is simply delightful. Birds came out in as good or better shape than when they left the yards, and when the fanciers learn the facts in regard to this show and its management, we predict that it will be one of the largest and best held anywhere in the country.

The middle of June is the one time in the year when the breeders can, without inconvenience, get away from their work for ten days, and we owe it to ourselves to take a vacation and there is no place in America where we could better combine business with pleasure and have a genuine "Old Fanciers' Love Feast."

Fishing in the lake is at its best at this season of the year. The large crowds from the cities have not come in such numbers as to crowd the cottages and hotels; accommodations are comparatively cheap, and one can secure boats of any style or make them their desire and for a very small sum can charter one large enough to take the entire crowd out for a day's trip.

So far as the show room is concerned, there is nothing in America that will touch it. The auditorium is

225 feet long, 165 feet wide and 65 feet high, perfectly lighted and ventilated from all sides. There is also an annex 800 feet long with a seating capacity of 10,000. One can form some idea of the building and its light when

The above illustration is of Buff Plymouth cock owned and bred by Robert Larmer, Stanberry, Mo. This bird has been shown at Chicago, St. Louis, Kansas City and twice at Topeka and Stanberry, seven times in all, winning five firsts, a second and a fifth, and is now heading one of Mr. Larmer's best pens for this season's mating.

we state that the National Photograph Association has held five annual conventions here, and has given this building preference over that offered by the

best cities in the United States and Canada.

Steps have been taken to have the association incorporated, and this will be accomplished before the show is held. Premiums will be given on fowls only. For further information write the secretary, J. W. Morris, Jamestown, N. Y.

WISCONSIN ASSOCIATION IS RE-ORGANIZED HERE.

Despite the inclement weather a large number of enthusiastic poultry and pigeon fanciers responded to the invitations sent out by the promoters, Messrs. Theodore Koss, William Stewart and C. G. Loeber, which read as follows:

"After due consideration, and knowing the need of a first-class and up-to-date poultry association, not only in Milwaukee but in Wisconsin in general, managed on strict business methods, we, the undersigned, advance the idea of reorganizing the Wisconsin Feathered Stock Association.

"We therefore ask you to favor us with your presence at a meeting for the purpose of discussing this proposition. We ask you to bear in mind that this meeting is called for the good of the poultry, pigeon and pet stock fraternity in general, and therefore urge not only you to be present, but to induce all those interested to come. Theodore Koss, William Stewart, C. G. Loeber."

The meeting was called to order by William Knell, who was elected president, and C. G. Loeber, secretary pro tem. After much discussion, which showed the true fanciers' spirit, the

MILLVILLE MATINGS FOR 1905

Will Produce Winners For America's Leading Shows

A 16-page list giving careful description and prices of eggs from every mating we have, is free for the asking. We will sell you eggs from every mating on the place, and you will stand an equally good chance with us of raising winners for 1905-6.

During the past five years over 1200 prizes have been won by our birds at leading shows East and West. Cockerels fit to head your best pens \$5 to \$25 each. Carefully mated pens of five birds \$15 to \$50. REMEMBER, we pay return charges on any birds not proving satisfactory. We have the stock. We can and will please you.

SAMPLE TESTIMONIAL

Millville Poultry Farm Co., Millville, N. J.

Gentlemen:—My first prize Boston cockerel, and winner of the \$100 Challenge Cup for champion male bird is Millville Strain. He was sired by a cockerel raised from your eggs, mated to hens from your eggs direct and is a grandson of old "Gold Dust." I think your strain of Buff Rocks the best in the country today. When in need of new blood shall send to Millville.

Very truly yours,

Berwick, Maine, February 22, 1905.

(Signed) MELVIN FALL, JR.

We won Challenge Cup at Boston in 1902-3, and a Millville bird won it in 1905. Clean sweep for our strain since cup was offered. Our new catalogue will contain similar testimonials from customers of every variety. Mated for the asking. Millville stock and Millville methods will please you, and we hope to add you to our list of permanent customers.

MILLVILLE POULTRY FARM COMPANY

Maurice F. Delano, Pres., Box J, Millville, New Jersey

Fanciers and Enthusiasts WARNING

More failures and shattered hopes in poultry breeding have come from a wrong start with inferior stock than any other cause. If a start is made with a setting of eggs from real quality stock and the growing from it of a few **good ones**, success will come, provided nothing but quality stock be added from time to time.

Sixteen years ago we started in this way, with the result that today we look back on Elm Poultry Yard winnings in keenest competition that have been numerous and continuous. Our patrons share in these winnings.

During the past season our stock won over 500 prizes including Championship Cups, Medals, Specials, etc.

The reason of this tremendous success is that the stock is bred right.

Our 1905 illustrated catalogue is now ready. It gives a few facts about our Exhibition Bred Stock from special matings and our great laying stock from line-bred record layers. Post Card request will bring you a copy.

motion was finally made and seconded to reorganize the Wisconsin Feathered Stock Association. This motion was carried without a dissenting vote. The first thing in order was the election of officers, which resulted as follows:

President, Theodore Koss.

First vice-president, H. F. Crandall.

Second vice-president, Dr. Arthur Cohn.

Secretary, C. G. Loeber.

Treasurer, William Stewart.

It was decided that the committee on rules and regulations consist of the board of officers and William Knell. They will frame a constitution and by-laws and report at the next regular meeting, which will be held Wednesday, March 1, it having been decided to hold the meetings the first Wednesday in each month.

A resolution which was adopted and which should be kept in mind by all interested in the club is the following:

Resolved, That the initiation fee for charter members be fixed at \$1, and that all fanciers signing the membership roll at or before the next regular meeting shall be accepted as charter members. Any information desired will be gladly given by the secretary, whose address is 1717 Walnut street. The following is a list of persons who were enrolled as charter members:

Theodore Koss, H. F. Crandall, Dr. Arthur Cohn, C. G. Loeber, William M. Stewart, William R. Knell, M. A. Freedy, John Nowak, F. C. Zacher, F. W. Andree, M. H. Traub, G. W. Schubert, William Tegge, H. G. Schmidt, J. N. Koop, R. W. Rosenberg, W. C. Herzog, August Richter, Sr., George Taege, P. I. DeGelleke, Edward Roloff, Joe DeGelleke, J. C. Schulz, J. Valier, Charl Kaiser, J. S. Bletcher, Charles Rauser, C. L. Roloff, Charles Houtkamp, John Splavie, Louis Wild.

DALTON, MASS.

The Dalton Poultry, Pigeon and Pet Stock Association held their annual meeting Feb. 11, 1905, and elected the following officers: President, Granville A. Parker; vice-presidents, Peter J. Tyre, of Lenoxdale; S. P. Briggs, Fred G. Strong, Milo Goodell, of Pittsfield; Charles H. Cooper, of Dalton; executive committee, George C. Maynard, Robert Whitaker, Charles Landers, George Crew, W. M. Cooper, M. E. Stockbridge, Fred G. Sears, A. K. Cleveland, Wesley Barton, O. M. Shedd, H. A. Messenger, George W. Ferry, Lawrence Howorth, Charles E. Parker, Nathaniel Morris; hall superintendents, W. M. Cooper, A. K. Cleveland; treasurer, Charles E. Wilner; secretary, W. H. Griswold. The association voted to hold a show four days, January 16, 17, 18 and 19, 1906, and to engage I. K. Felch of Natick as judge.

CRESCO, IOWA.

The second annual show of the Howard County Poultry Association will be held at Cresco, Iowa, Jan. 31st to Feb. 3d, 1906. Geo. D. Holden will do the judging. Jno. M. Davis, secretary, Cresco, Iowa.

Hastens growth of little chicks
Pratts Poultry Food.

Made by Pratt Food Co., Phila. Over 30 years old.

BELVIDERE, ILL.

The sixteenth annual exhibition of the Northern Illinois Poultry Association was held first week in February and was a decided success in every way in spite of the extreme cold weather. There were 858 birds entered, the finest all-around collection of specimens that has ever been gathered together in the history of the association. Judge Holden, of Owatonna, Minn., placed the awards.

TOLEDO, OHIO.

The Toledo Fanciers' Association held at Toledo, Ohio, Feb. 1-6, 1905, was a big success in number of exhibits, qual-

which follows the Alameda show by a few days, and which will enable all fanciers who exhibit at the Alameda show to stop their birds en route south and thus make a circuit of the coast shows.

This show will be judged by comparison and will be the first show so judged that has been held by this association, and a corps of competent judges will be selected as soon as they can be communicated with and terms arranged.

GEO. R. ANDREWS, Sec.

Fresno, Cal.

ANTWERP, OHIO.

The annual show of the Antwerp Poultry and Pet Stock Association proved a financial success. The entries

land Silver Pencilled Wyandotte Club was organized, the following officers were elected: President, F. W. Rogers, Brockton, Mass.; first vice-president, Guy H. Hubbard, Penacook, N. H.; second vice-president, Howard D. Gordon, Hazardville, Conn.; secretary and treasurer, C. H. Pope, Brockton, Mass. There will be added a vice-president for each New England state except the one in which the president resides.

The fourth annual exhibition of the Electric City Poultry, Pigeon and Pet Stock Association, held at Schenectady, N. Y., Feb. 1-4, 1905, was a record breaker, both in number of entries and attendance. The classes were all well filled, particularly the buff varieties, Buff Leghorns being the largest class, with R. I. Reds a good second.

The Western Illinois Poultry Association is to be permanently located at Mt. Sterling, Ill., where they expect to hold a show next winter. Eugene Hambaugh, sec., Mt. Sterling, Ill.

"KING COLE."

First prize cock at Chicago, January 23 to 28, 1905. All judges pronounce this bird one of the best cock birds in America, having all of the good qualities of the Rock family. This bird will head my first and special pen. Owned and exhibited by Dearborn Poultry Yards, Dearborn, Mich.

ity of specimens and attendance, and they are now making plans for their next annual show, which they expect to make even larger than the one just held.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—The Fresno Poultry, Pigeon and Pet Stock Association has come to life again and elected a new set of officers and determined to hold another show this fall. We have had no show for the past two years, but are going in now with renewed vigor and intend to hold the biggest show and the best show that we have held yet. We have selected the dates, December 13 to 16, inclusive,

were much larger than anticipated, and quality fine; more than two-thirds scored over 90. The next annual show will be held in December next.

POULTRY MEETING.

The annual meeting of the Pierce City and Monett Poultry Association will be held at the office of the secretary, in Pierce City, Mo., at 2 p. m., Thursday, March 23, 1905, at which time there will be held the annual election of officers of the association. THOS. CARLIN, Sec.

Pierce City, Mo.

SPECIAL FEED CROPS FOR POULTRY.

The necessity of providing corn, and sometimes wheat and oats for winter food for poultry, is generally understood, but if to these were added a supply of other grains and vegetables our poultry would be better conditioned and much more profitable. Imagine the result if we were put on a diet of corn bread exclusively, yet nine out of ten think their duty done by throwing out more or less corn, and gathering the few eggs.

When fowls have unrestricted range through the summer this treatment appears to fulfill every obligation, as nature in her generous way supplies the required demand, but when ice and snow has covered the ground and our poultry is confined to close quarters a variety of food should be given.

Experienced poultry men understand the value of a variety of foods, and that it is essential for the health of fowls,

SILVER PENCILED WYANDOTTE.

First hen at Detroit State Show. Owned by H. H. & E. M. Coburn, Memphis, Mich.

and the production of fertile eggs from which we can expect strong, healthy chicks, but the inexperienced must learn all these things.

Of these "Special Crops" let us call the attention to a few that are cheap and easily grown.

As to special grains we may name buckwheat, as the most valuable for the production of eggs. This grain can be sown as late as July, in fact, this is the month it is usually sown. It yields from 20 to 40 bushels per acre, according to conditions and seasons, and is but little trouble to handle.

Sunflower seed should be included in the bill of fare of all well regulated poultry yards. They are equally valuable to old and young poultry. The amount of oil they contain gives brilliancy and gloss to the plumage, unequal to any other food. They are quite easily grown and need but little care. One year we raised something like 15 bushels of the Mammoth Russian, by planting be-

tween the tree rows of a young orchard. In the fall the large heads were cut off, placed in a wagon and thrashed. The seeds were then stored in barrels in a dry place and made an excellent change of diet. Even when fed in large quantities no bad result followed as the husks or shells are taken with the meat.

The seeds of the common millet, golden millet, sorghum, and broom corn make a valuable list of good cheap foods.

Barley, too, is well known to be an excellent food in the poultry yard.

Among the vegetables cabbage is the cheapest and most easily obtained of green foods for winter; enough can be raised by putting out a few more plants than are needed for the family's use, and can be stored away in barrels set in the ground and covered over; and are convenient when needed.

Onions should also be grown and kept for fowls—they are considered very healthy and when chopped moderately fine are eagerly consumed by fowls. Enough potatoes can be planted to have the small ones used in the poultry yard. Well cured green corn stocks and clover hay should be provided as regularly as hay for other stock; it helps in the assimilation of their food. We might enumerate many more grains and vegetables that are easily grown, but enough are mentioned to remind the new beginner in poultry, that May is a most excellent time to make arrangements to grow these "Special Feed Crops" for winter use in the poultry yard.

FAIR WARNING TO ALL

The Following Affidavits should be read twice at least by such persons as are **Making, Using or Selling** the articles referred to therein:

STATE OF NEW YORK, }
County of Erie, } ss
CITY OF BUFFALO.

Affidavit of Charles E. Adair.

Charles E. Adair, being duly sworn, states as follows:
(1) That I am the original and first inventor of the thermostat, an illustration of which is attached hereto.

- (2) That I invented this device prior to December 31st, 1903, and during the year 1903 I manufactured and sold incubators containing it.
(3) That I have sold the said thermostat and all my rights in it to the Cyphers Incubator Company.
(4) That to the best of my knowledge and belief the thermostat now being manufactured and sold by Charles A. Cyphers is an infringement of my invention, and proceedings are being taken to protect the rights of the Cyphers Incubator Company therein.

Chas E. Adair

Subscribed and sworn to before me this 11th day of March, 1905.

Notary Public.

STATE OF NEW YORK, }
County of Erie, } ss
CITY OF BUFFALO.

Affidavit of Clarence Zane Davis, Buffalo, N. Y.

Clarence Zane Davis, being duly sworn, states as follows:

- (1) That during the year 1903 I was in the employ of the Cyphers Incubator Company as expert mechanic; that I left said employ for a period of several months, and that I am now again employed by said company.
(2) That during the year 1904 I conceived, designed and constructed the thermostat now being manufactured and sold by Charles A. Cyphers, as shown in the accompanying cut.

- (3) That I believe the said thermostat is legally and rightfully the property of the Cyphers Incubator Company by reason of priority over my invention, and in the face of the information I now possess I make no further claim to being the first inventor thereof.

Subscribed and sworn to before me this 7th day of March, 1905.
[Signature]
Notary Public.

To Whom It May Concern.

THE CYPHERS INCUBATOR COMPANY, having had its attention drawn to the fact that Charles A. Cyphers (among others) is manufacturing and selling to innocent persons an incubator that he calls the "Model," and a thermostat, the patent rights of which are owned by this company,

This is to notify all interested persons as follows:

- (1) That the Model Incubator is claimed by us to be an infringement of patent No. 530,163, owned by this company.
(2) That the Cyphers Incubator Company has begun suit in the United States Circuit Court for the Western District of New York against Charles A. Cyphers to restrain him from selling the Model Incubator, which suit for infringement is being vigorously prosecuted.
(3) That the Cyphers Incubator Company hereby announce their intention of prosecuting all those who infringe their patents either by selling or using Model Incubators like that in suit, and that this is to be considered notice of the fact.

- (4) That the thermostat illustrated hereon is the sole property of this company.

- (5) That the Cyphers Incubator Company has begun proceedings relating to its patent rights in the thermostat illustrated herewith, and that said company will demand redress and damages for the manufacture and use of the said thermostat without its permission.

- (6) That suit against other persons or companies infringing the rights of this company by making or by using or by selling articles patented by it, will be instituted as evidence is collected.

That the following is an exact quotation from the opinion of a foremost patent expert recently given to the Cyphers Incubator Company.

"I have carefully considered the question submitted to me as to whether or not the Model Incubator, as illustrated in print submitted to me and described in Chas. A. Cyphers' pamphlet, is an infringement of the Cyphers Patent, No. 530,163, Dec. 4, 1894. In my judgment there is no question but that the Cyphers Model Incubator is an infringement of the Cyphers patent."

Subscribed and sworn to before me this 15th day of March, 1905.

BELLE CITY INCUBATOR COMPANY, Box 27, Racine, Wisconsin.

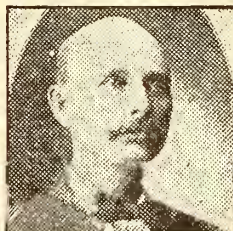

THE "SURE HATCH" RECORD.

The Sure Hatch Incubator Company started in a very modest way out at Clay Center, Neb., only a few years ago.

At that time they had a small factory and their output was limited to a few machines, but the success of the "Sure Hatch" was wonderful.

People who bought the "Sure Hatch" soon found that it gave good service hatched chickens, was easy to run, took little oil and little attention, and yet sold for a lot less money than the older, more complicated machines that did not give as good results.

As a consequence the sales multiplied very fast, and the Sure Hatch Incubator

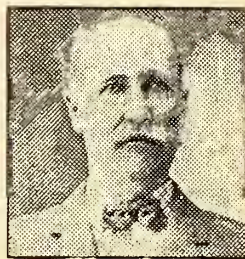

Dr. O. P. Shoemaker.

became the most popular machine on the market. They have sold over 60,000 of these machines throughout the whole United States, and Clay Center, Neb., is known far and wide as the "home of the Sure Hatch." The ownership of the "Sure Hatch" now is in the hands of Dr. O. P. Shoemaker and Wm. Seelig, the same gentlemen who financially backed it from the beginning. The management was changed two years ago. Dr. O. P. Shoemaker is now president. Mr. William Seelig, vice-president and general manager, has charge of the Indianapolis office. The owners now manage the business. The company's business methods are conducted on the Golden Rule plan. Every Sure Hatch patron is absolutely assured of a "square deal."

The company has made money, and a hundred thousand dollars backs up the Sure Hatch Incubator. They have without a question of doubt the best machine on the market this year.

The "Sure Hatch" is made to heat quickly with a small amount of fuel and a very little trouble, because the amount of heating surface (138 sq. in.) on the water heater is sufficient to bring the pipes full of cold water to the boiling point in from three to four hours in cold weather, something no other incubator will do.

William Seelig.

When the lamp's heat is being used, it is all used, and the egg chamber is heated to the proper temperature regardless of the weather. When the temperature in the egg chamber gets to the proper point, it stays there, because when it is hot enough the surplus heat from the lamp automatically escapes—a little, or all of it—just as may be necessary, and the temperature does not go higher. This great feature, this revolution in incubator heater manufacturing, is protected by patent and cannot be had on any but the "Sure Hatch."

"Sure Hatches" are good, they hatch and raise more chicks that live and grow to the 100 eggs than any of their competitors. The "Sure Hatch" record says so. The "Sure Hatch" record is made up of the testimony of the persons who, during the past six years, have purchased 60,000 "Sure Hatches." The "Sure Hatch" record is reliable. Tens of thousands of the best citizens and wealth producers of this great country of ours say the "Sure Hatch" is all right.

The Sure Hatch Incubator Company is offering the 100-Egg machine for \$10, freight prepaid. In writing, always address their Clay Center, Neb., office if you live west of the Mississippi, or the Indianapolis, Ind., office if you live east.

Joseph A. Burkhardt, of Smithsburg, Md., has about finished moving and has all his new buildings finished and is now ready to furnish Single Comb White Leghorn eggs in any quantity from 1 to 1,000 from the best pens he has ever mated.

TROUBLESOME PARASITES.

It would seem that everything possessing life has an enemy of some sort. Parasites attack both plant and animal with a persistence and destructiveness which, if unchecked, works ruin and frequently death. Just what part these pests play in the economy of nature is sometimes hard to determine. That their extermination is, in many cases, an absolute necessity is certain. The George H. Lee Company, of Omaha, Neb., manufacture a preparation called Lee's Lice Killer for destroying parasites on poultry, hogs and other stock. It is a liquid and is especially designed for killing lice and mites on chickens and hogs without handling, dipping, dusting or greasing fowls or animals. To do this requires a fluid of sufficient strength so that the gas or vapor given off from it will kill the lice without touching them with the fluid itself. At the same time it must be harmless to fowls, animals or operator and perfectly safe to handle. Lee's Lice Killer is placed on the market as a preparation meeting these requirements and is extensively used not only for poultry but for horses and cattle as well. In their booklet describing this article it is said that the dollar's worth of Lee's Lice Killer will go farther than twice that amount of any other lice liquid or powder in the world. There are also many testimonials as to its efficiency. Further information may be had by inquiring of your local dealer or writing directly to the George H. Lee Company, who have had this preparation on the market for number of years.

"TRUE TO LABEL."

Many a confiding "chicken crank" has been deceived by the representations of so-called breeders. These latter have claimed to send stock and eggs true to name. It is not so easy to humbug a patron with adult birds. It is comparatively simple to deceive a person with eggs. Such a policy is truly short sighted.

The Great American Poultry Farm, Brodhead, Wis. has built its reputation on the high quality of its eggs and breeding birds. Every person who orders eggs is assured by John Neilsman, the manager, that thus they will get eggs fresh and true to label; that these eggs will be selected personally by experienced men who understand how to breed winning strains and good layers.

The Great American Poultry Farm is situated in a section well adapted for raising hardy fowls who resist cold and low temperature without harm. All living stock sent from this farm are guaranteed to be pure bred, true to name, of age as represented, healthy and free from vermin.

The Great American issues a large illustrated booklet which is sent free to every one interested in poultry.

The Buckeye Incubator Company, of Springfield, Ohio, has just issued a supplementary catalogue that should be in the hands of every poultryman. It is descriptive of their new colony and sectional poultry houses, which enables the novice to enter into the poultry business with scarcely no outlay for poultry buildings, and the professional poultryman to add to his plant to any desired capacity, cheaper and more desirable than he can build himself.

The colony house is a model of ingenuity. Fitted with either their hot air or hot water brooder, it makes an ideal outdoor brooder at a minimum of expense.

For this purpose it has no rival and as soon as the chicks need the brooder no longer this is removed and the space used as a colony house.

The sectional house is so constructed that section by section can be added as extra space is needed, and its practicability will at once be recognized by the poultryman. It enables one to start in a small way and only add additional buildings as necessity demands and when complete is as strong and lasting as though but one building, and has the advantages that each section is complete in itself, separated from the others by solid partitions with doorway leading to each section.

Besides detailed description of these houses, it tells of the Buckeye Poultry Foods and Remedies, and a chapter on feeding that is worth many dollars to the novice. We cannot do the reader a greater favor than to ask him to send to the Buckeye Incubator, Springfield, Ohio, for this supplementary catalogue.

HARDING'S

Baby Chick Food

FOR HARDY CHICKS

makes baby chicks hardy. Makes vigorous, rapid growth, insuring chick life, so uncertain at this stage, that it more than saves its cost in saving life. It adds profit where loss is the usual result. One trial test will prove its worth. It saves worry and makes poultry raising pleasurable—profitable. 5 lb. cartons, 30c; 10 lb. bags, 50c; 50 lb. bags, \$1.50; 100 lb. bags, \$2.50, f. o. b. Binghamton, N. Y. Give your chicks a chance for life by giving them food that furnishes life—Harding's Baby Chick Food. Send for free catalogue containing good points for making poultry pay.

Geo. L. Harding, Box 333, Binghamton, N. Y. U. S. A.

FEED HARDING'S FOOD

NO. 1 SINGLE ROOST STYLE

Get Ready—They're Coming.

Millions of mites will come with the hot weather to suck the life blood of your flock. Don't wait until your fowls are infested with vermin and your busy season is on before installing our anti-louse roost fixtures, which will effectually prevent their ravages.

Davis Anti-Louse Roost Brackets

make it impossible for them to get onto the perches from the wall or to wall from perch without getting trapped in the oil cups which catch them by thousands. Most convenient and practical and the only bracket made that lifts up out of the way for cleaning dropping board, painting underside of roosts, etc. More eggs and increased vitality of chicks and fowls will result from their use.

Prices: No. 1 or single roost style with screws, 75c per pair; 3 pair, \$2.00; 6 pair, \$3.50; 12 pair, \$6.25. No. 2 or multiple roost style complete with chains and screws \$1.25 per set; 3 set, \$2.25; 6 set, \$5.00; 12 set, \$11.50; f. o. b. Battle Creek, Mich. Circular free. Ask your supply dealer for them. Order today. Don't wait. Do it now.

The Keyes-Davis Co., Ltd., Mfrs., Dept. B, Battle Creek, Mich.

NO. 2 MULTIPLE ROOST STYLE

"WHAT WILL THE HARVEST BE?"

That is a question that will take time to answer, but a little forethought now will go a long way toward determining what the answer will be. The right kind and quality of seed is pretty apt to bring the right kind of crops and now is the time to buy seed.

The Wernick Seed Company of Milwaukee, Wis., offer a very complete line of farm, garden and field seeds, and among them some varieties especially adapted to the northern latitudes and less productive soils. In addition to these they carry a large line of garden tools, beekeepers' and poultry supplies, insecticides, fertilizers and nursery stock. Their large and fully illustrated descriptive catalogue lists a large number of good things for the garden and farm, both ornamental and useful.

They are prepared to give prompt attention to the purchaser. Note their advertisement, which appears on page — of this issue.

USE FOODS OF KNOWN QUALITY.

When sending away from home for poultry foods and supplies, etc., you should see that you secure the very best. There is a vast difference in the quality of the various commercial poultry foods now on the market. The only safe plan, therefore, is to deal with a house that is known to be reliable. Such a concern is Darling & Co., Union Stock Yards, Chicago, Ill. They manufacture and handle all poultry necessities, such as beef scraps, beef meal, laying food, chick food, granulated bone, concentrated meal, oyster shells, mica crystal grit, lice killers, etc. In fact, a full line of the best poultry foods and supplies.

Darling & Co. can be relied on for quality. When they say, for example, their beef scraps contain from 55 to 65 per cent of protein, their beef meal from 45 to 55 per cent of protein and that both run low in fat, you can depend on receiving goods just as represented. Protein, by the way, is the essential element. An excess of fat is not desirable. By adhering rigidly to the policy of manufacturing only high grade products they have built up a great trade among the poultry raisers of the country. Their 100-pound bag lots of foods have become a very popular line with large and small poultry raisers. We have no hesitancy in recommending the company and their products unreservedly to our readers.

Their poultryman's booklet, "Fill the Egg Basket," has become deservedly popular.

lar. It is a book all poultrymen should have. It, as well as their large and finely illustrated poultry and stock supply catalogue, will be mailed free upon request. You will find their "ad" elsewhere in this issue.

Experiment stations have found that goods like those manufactured by Darling & Co. meet all the requirements so far as quality, manner of grinding, cleanliness, etc., are concerned. This means a whole lot to you. You cannot afford to use any but the best. The results obtained from inferior articles does not justify your wasting time on them.

SOME GOOD POULTRY READING.

What to feed, what not to feed, when, how and how much—these are things that trouble the old poultry raiser as well as

and plainly with these questions, and yet in such small space and such easy, familiar style, that we feel like urging our readers to send for it. Its scope is wider than the mere matter of feeding, though that subject is given the prominence it deserves. The title is "The Proper Care and Feeding of Chickens, Ducks, Geese and Turkeys." It is sold at 10 cents, and it is well worth the price to everybody who raises poultry. The information and suggestions are in compact form, so that they will be put into practice every day. It is to be had only by writing to the Royal Incubator Company at the address given above, enclosing the price.

AMATITE READY ROOFING.

This is the new Ready Roofing the people are talking about. It comes in rolls, ready to lay, and any man can do the work—no skilled labor is required. It is mineral surfaced and requires no coating of any kind. The manufacturers are anxious to have farmers look into the propositions and offer to send a free Sample and Booklet to anyone who will send their name and address to any of the following offices of the Barrett Manufacturing Company: New York, Chicago, Philadelphia, Cleveland, Cincinnati, St. Louis, Allegheny, Kansas City, New Orleans, Minneapolis.

A FEW WORDS ABOUT PRESERVING WOODWORK AGAINST ROT AND ON THE VERMIN QUESTION.

The farmers all over the country count amongst their heaviest expenses to run the farm, the lumber bill. All are undoubtedly interested to learn of a medium to reduce same at least half its former cost. This medium of "Carbolineum Avenarius," a wood preserving paint, based on thirty years' experience. Many are of the opinion that paint, tar and linseed oil will preserve the wood against rot and decay. These coatings only form an air-tight cover, but do not destroy the albumin parts in the wood, which always start the rot. The coatings with above mentioned materials prevent the evaporation of the wood and the consequence is dry rot. Carbolineum Avenarius, on the contrary, penetrates

deeply into the wood and destroys all present decay matters. The Carbolineum Avenarius is applied with a brush and imparts a nice nut-brown color to the wood. It is used on the farm for painting barns, granaries, shingles, silos, posts, bridges, chicken coops, etc., and all woodwork above or below the ground. Carbolineum Avenarius is also the most radical remedy against chicken lice. If you want plenty of eggs and healthy chickens the chickens must be free from lice and mites. Carbolineum Avenarius will keep your hen house free from this plague. One coat applied to the inside of the chicken house will keep it clean from vermin. Kerosening and whitewashing, which has to be repeated every month, is done away with, and the expense for sulphur and insect powder are saved. Whoever desires further information about Carbolineum Avenarius should write us or ask our agents.

A NEW IDEA FOR POULTRY-KEEPERS.

How to Pick Out the Layers.

There have been many good ways and means devised of recent years to assist the keeper of poultry in deriving greater profit and pleasure from the business of poultry keeping as a vocation. But none of late have come to our notice which seems to have such a sound, practical foundation nor offers such an avenue to greater results than that recently offered by the Walter Hogan Company, of Fergus Falls, Minn., in the form of a system of selection whereby the poultry keeper can pick out the hens that lay from the hens that don't lay. The mere thought of being capable of this ability suggests at once a feature that is unequalled in its value to those who are engaged in the poultry industry for a livelihood.

It is an undisputable fact that to make a greater margin of profit from poultry one of two things must be accomplished: the price obtained for the product must increase on prevailing cost of production or the cost of production must be reduced. It is evident then that a system which will enable the poultrymen to weed out the non-productive hens from his flock and consign them to the man with the hatchet will stop a leak in his profit that ought to show on the credit side of his ledger a neat, snug sum at the end of the year.

This system is the discovery of one who has spent years in developing it into a practical science which can be taught to anyone with reasonable intellect. It not only enables one to select the layers, but also select the cockerels that will breed the best layers; also select the pullets that will lay the earliest and longest. Imagine what that means in the way of developing a flock to the highest degree of profit producing. Think of the saving that means in time, labor and feed, and then turn to the half-page announcement of this company in our advertising columns, March issue, and read how you can acquire this valuable method. How they will guarantee to teach you this system or refund your money. Certainly you have nothing to lose by taking advantage of their liberal offer, but instead everything to gain.

Your own knowledge gained from experience with poultry will assure you of the practicability of a system along these lines. The idea of feeding egg-making food to fowls that are egg-barren is a fallacy you well know. Then why feed them when you can learn to select them out of your flock and save this waste of money? Here is an opportunity no keeper of poultry should fail to embrace, especially under the conditions it is offered, and if the company offering it were not thoroughly satisfied would not be spending the liberal appropriation they are in putting it before the poultry industry. We would recommend our readers to write them for full information and circulars giving full details, stating that you read their announcement in this paper, and we are satisfied you will be well repaid.

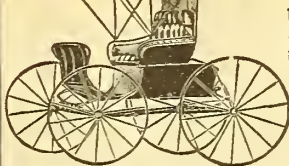

Any one desiring to secure a start in some good Buff Wyandottes or Plymouth Rocks would do well to order some eggs of F. W. Owens, Richwood, Ohio, who handles these two popular varieties. Look up his ad elsewhere in this issue and then write him for prices.

Doolittle's Worlds Fair Winners

At the grandest and most gigantic Poultry Show to date, with practically 9,000 birds on exhibition, including Partridge Wyandottes from twelve states, viz: Pennsylvania, New Jersey, Ohio, Iowa, New York, Illinois, Tennessee, Connecticut, Indiana, Nebraska, Missouri and Kansas my birds won eleven prizes on ten entries, including 1st Hen, 1st Cockerel, 1st Pullet, 2nd Cock and 3 specials, best shaped female, best colored female, best colored male. Who can beat it with 10 entries on a single variety?

Send 10c for my 1905 catalogue which is without a doubt the most complete catalogue issued to date on this variety. It contains a color plate, taken from life, of a pair of Partridge Wyandottes, suitable for framing; the female represented in this being the first prize hen at the St. Louis World's Fair 1904. This catalog also contains a brief history of the variety tells how to mate for best results and is full of information from cover to cover.

The 10c is to cover cost of the color plate. Mention American Poultry Journal.

CHESTNUT GROVE ORPINGTON FARM

F. C. Bailey, Reading, Mich., R. R. No. 19

DESTROYED BY FIRE.

The plant of the Alfalfa Meal Company, of Omaha, Neb., was totally destroyed by fire on February 2, 1905. We are pleased to be able to announce, however, that Mr. Payne, with his characteristic hustle and enterprise, has closed a contract for the purchase of a new factory building and that the company is again ready to fill orders as if nothing at all had happened. In fact, in its new home, it is better prepared for a big business than ever before. We understand that the company will increase its capacity to over three times the former output, or thirty to forty tons per day.

The new factory of the Alfalfa Meal Company occupies something over one acre of ground, is three stories high, built of brick, and will be devoted exclusively to the manufacture of Payne's alfalfa feeds.

This company is the original Alfalfa Meal Company, and Mr. Payne, the president of the company, is the first man who ever ground alfalfa into meal. That alfalfa meal meets a need is well proven by the remarkable growth of the business of this company. In January, 1904, their sales were four carloads; in January, 1905, forty-four carloads, and then the fire wiped their entire plant out of existence.

We believe that the advent of alfalfa meal as a feed for poultry is a good thing and we predict that its use will mean more money for all who feed it, consequently we are glad to note that its manufacture is to be continued on a vastly larger scale than before the fire.

One thing we like about Mr. Payne's method of putting his alfalfa products on the market, and that is his honesty in telling just what each product is composed of. There is nothing secret about these feeds.

Our readers should look up the advertisement of this company in another column of this paper and write for a copy of its valuable book, "Poultry Pointers." The book is full of information that will be helpful to you. It's free.

FREE ROOFING SAMPLE.

Until recently an absolute waterproof roofing was practically not to be found. But in the improved Amatite—a tarred felt roofing with a mineral surface—we believe those who are interested in the roofing subject will find exactly what they are looking for. The makers' claims have been fully substantiated by the test of service and the cost is slight. A sample and full information is sent free by addressing the Barrett Manufacturing Company at New York, Chicago, Philadelphia, Cincinnati, St. Louis, Allegheny, Kansas City, New Orleans or Minneapolis.

C. B. Huff, proprietor of the Riverside Poultry Yards, has moved from Delavan, N. J., and is now located at Bridgeville, N. J., where he is prepared to take care of all orders in his usual prompt manner. Look up his ad elsewhere in this issue and write him for what you want. Mention AMERICAN POULTRY JOURNAL.

D. T. Roots, of Connersville, Ind., the White Plymouth Rock man, has an especially attractive half-page ad in this issue which we know will receive many compliments.

Mr. Roots has sent us copies of his regular 36-page Stock Catalogue and his 24-page Egg Catalogue.

The Stock Catalogue will be sent on receipt of a 2-cent stamp and the Egg Catalogue will be sent free to all who inquire for same, mentioning the AMERICAN POULTRY JOURNAL. Both of these catalogues have been arranged and printed with the usual care that Mr. Roots gives to all of his work. They show magnificent illustrations of his White Plymouth Rocks; describe his winnings; have fine half-tone illustrations of the valuable cups he has won at different shows and of his prize winners; describe his matings and how matings should be done, and has a choice lot of testimonials. In addition to all this, he has several splendid articles which cannot help but be of value to any breeder, such as "How to Score White Rocks," by Theo. Hewes, and "From the Egg to the Exhibition Room," and an article on "Diseases of Poultry," and much other information of value to anyone in the poultry business.

The Egg Catalogue is devoted exclusively to a description of his different yards and illustrated by the prize winners that he uses in each yard and also a complete list of his show winnings. These should be in the hands of every White Rock breeder.

DON'T BURN MONEY

SAVE HALF

and get more heat and better light, by using

ACME SPECIAL BURNERS

Made in two sizes, No. 1 and No. 2. The No. 2 will make more heat and light than any No. 3 burner, and use 20 per cent less oil. The Acme Trip burners save 1/2 the oil for incubator use, because regulator turns flame up or down as needed. Can't over-heat or char the wick. The Acme Wick requires no trimming, is special close woven and twice as thick as other wicks, end encased in seamless metal tube with composition burner tip. As the oil passes through this composition, it is purified and converted into gas, burning with an intense heat and a brilliant light.

NO SMOKE - NO SOOT - NO OFFENSIVE ODOR

These wicks are for the Acme Burners only, and will last from 30 to 60 days for incubator use and 12 to 18 months for ordinary house use. Acme Burners fit any lamp. Give size of lamp collar when ordering. The Acme Automatic Gas Valve saves 75 per cent of gas for incubator use, because the regulator turns the flame down or up as needed. Burner tip can be located any distance and in any direction from the valve. For instance, burner can be placed under brooder hover and the valve remain on outside where it can be readily connected with regulator. Price of Acme Burner with wick, either size, pre-paid, 75c. Price of Acme Trip Burner with wick, either size, pre-paid, 81c. Price of extra wicks, either size, pre-paid, 10c each, 3 for 25c. Send for our complete catalogue of the Acme Compound Regulators, Acme Automatic Lamps, showing our latest combined damper and flame regulation, Incubator Fixtures, including the famous

THE BIRTHPLACE OF COMMODORE DECATUR.

The accompanying illustration is from a recent photograph of the birthplace of one of America's greatest naval heroes, Stephen Decatur. The building, which is situated on the nurseries of J. G. Harrison & Sons, at Berlin, Md., has remained practically unchanged through all the years since the great commodore left it to take up the career in which he afterwards achieved fame. It is a small cabin, old, weather-worn and partially decayed. It is now being carefully preserved for its historic value.

In this little cabin, on January 5, 1779, was born the boy whose fame was later to spread over the entire civilized world. Amid these humble surroundings he spent his childhood days.

The building and all the land which formerly comprised the Decatur plantation has recently been added to the extensive nurseries of J. G. Harrison & Sons. These nurseries, from a small beginning less than twenty years ago, have grown to be among

the largest in the United States. More than 1,000 acres surrounding the Decatur home are in cultivation, in peach, pear, apple, plum and cherry trees and every variety of nursery stock.

From this historic place hundreds of thousands of fruit trees and plants are each year sent to all parts of the country. The extreme care which is used in digging the trees, in preserving the roots and in packing enables the proprietors to guarantee delivery to any part of the United States in perfect condition.

The trees from the Harrison nurseries are famous for their hardiness and for the quality and amount of fruit which they invariably bear. Their trees thrive in almost any climate and every section of the country has large orchards planted in Harrison stock.

Visitors are always welcome at the Decatur plantation or any other part of the Harrison nurseries, and many people avail themselves of the opportunity thus offered of seeing at the same time an historical landmark and the workings of a large, modern, perfectly appointed nursery.

SIXTEEN YEARS OF STEADY GROWTH.

A business concern grows for two reasons. First, because it supplies what its patrons want, and second, because it is honestly, liberally and fairly conducted. There are many contributing causes to success, but these two reasons are paramount and are always found back of every permanent commercial growth.

Sixteen years ago the Harvey Seed Company, of Buffalo, N. Y., began by handling poultry supplies. They made it the cornerstone of their business to handle everything poultry people needed and to sell at reasonable prices. They insist that the quality of any article that receives their stamp of approval shall be unquestionably high and that it shall never vary but always be the same.

Each year of these sixteen has compelled this concern to let out another hole in their belt. They have steadily and constantly grown and expanded until today their trade extends to every town and hamlet of the United States and the name "Harvey" is known wherever a rooster crows or a hen cackles.

The Harvey Seed Company are the originators of some of the best poultry feeds that are on the market today. If you have never fed any of them you have not had the full measure of success that is possible for you. Feed plays an important part in the economy of the poultryman's business. Profit or failure may depend largely on the feed your fowls are fed. Harvey's feeds are good, sensible feeds—the result of experience and the improvements that these sixteen years have demonstrated were advisable and desirable.

Knowing that poultrymen like to buy all their supplies from one concern, thus saving shipping charges, the Harvey Seed Company carry immense stocks of poultry supplies of all sorts, such as cut alfalfa hay, Electric poultry food, mixed grains, chick foods, grits, crushed oyster shell, bone and meat preparations, lice killer, powders and every conceivable sort of appliance for the poultry house or pen—everything the poultryman needs: They are prepared to fill all orders promptly and to guarantee quality in every case. With their splendid shipping facilities they can reach every part of the country and save poultrymen money on all their purchases. They publish a complete catalogue of poultry and pigeon

supplies that is full of reliable suggestions. It will pay every one who keeps fowls to send for a copy of this valuable book. Address Harvey Seed Company, 65-69 Elliott street, Buffalo, N. Y. Mention this paper when you write and they will send the catalogue free of cost; they will also furnish any additional information that the reader may desire. We predict that you will be more than pleased with anything you order from this house and that the treatment they will accord you will induce you to go to them again and again.

ESSENTIALS TO SUCCESS.

It is oftentimes attention to details that contributes most largely to the success of any enterprise. Every part in good working order makes the whole system perfect. Every poultryman can appreciate from experience how defective appliances and inferior quality in supplies work harm and cause disappointing results. In purchasing poultry supplies the best is none too good. The line offered by W. J. Gibson & Co., Chicago, Ill., is very complete and includes "Everything for the Poultry Business"—incubators, brooders, foods, remedies, lice killers, grits, Standard bred poultry and eggs for hatching. They recommend their goods as the best of its kind and are prepared to handle all orders promptly. Their catalogue is sent free upon application. On page — of this issue will be found their advertisement.

CARE OF THE FACE.

You would not try to shave with a rip saw, would you? Then don't use ordinary soaps to make a lather for shaving. Such soaps are not suited to the delicate tissues of the face, and are bound to make it sore and rough and uncomfortable. Use the soap made especially for shaving, the very best, made by the J. B. Williams Company, Glastonbury, Conn. If you wish to try a sample of Williams' Shaving Soap, see their offer in another column. Remember that nature has given you but one face and it is up to you to take care of it.

West Michigan Poultry Farm

Geo. S. Bigelow, Proprietor
R.D. 4 Bangor, Mich.

BUSINESS ENTERPRISE.

Some years ago an idea came to a man's mind. The idea took form in action and a modest beginning started what was destined to become a flourishing business. It took time, patience and brains. But time, patience and brains won, as they always will with any good proposition. So it came about that the Lathrop Manufacturing Co., of Rochester, N. Y., has become widely known as the makers of Poultry Appliances. These include Portable Poultry

Houses, such as the one shown in our illustration, which was exhibited at the recent World's Fair, Portable Fences, Chick Sewers, Drinking Fountains, Exhibition Coops and many other articles of value to the practical poultryman and the fancier. By energetic and vigorous application to business this concern has increased its volume of trade and built up a desirable patronage. They desire to come in touch with progressive poultrymen everywhere who they believe will find their products to be of practical benefit. For catalogue, price lists or other information address Lathrop Manufacturing Co., Rochester, N. Y. Their advertisement appears in this issue.

A DANDY CATALOGUE.

Manufacturers naturally vie with each other in their efforts to produce the best goods and to sound their praises abroad. This is especially so where competition is strong. In no other line is this more fully demonstrated than in the manufacture of incubators and brooders. The market is teeming with these articles, so that intending purchasers may very easily become confused in selecting the best machines for their particular use. It is safe, however, to confine your choice to those makers who are enterprising enough to advertise their product extensively, for no article will long be able to stand such expense if it does not contain genuine merit.

We have before us the new catalogue of the Dandy Poultry Novelty Co., of Danville, Ill., and we can heartily recommend that our readers write for a copy of it before they buy an incubator or brooder. This catalogue illustrates and describes a line of goods that its users say is entitled to all that the name "Dandy" implies.

The makers of the "Dandy" line of poultry supplies believe in the virtues of advertising in marketing their product and their phenomenal success proves that the merit of their goods will stand all the good things that may be said about them.

J. A. Barnum, formerly of Tekousha, Mich., has moved to Coldwater, Mich., and all orders should be sent to that address. Coldwater is nicely located on the main line of the Lake Shore & Michigan Southern railway, and affords unsurpassed shipping facilities. Mr. Barnum has sold his farm at Tekousha and purchased one near Coldwater, where he can serve his patrons to better advantage. He expects to build quite extensively this season, to be able to supply the increased demand for his Barred Plymouth stock and eggs.

Mrs. T. F. Leonard, of Mt. Sterling, Ohio, has some good Wyandottes for sale, carefully selected from pen of her very best White Wyandotte hens and pullets of good size, shape and excellent laying qualities, mated with fine cockerels of grand shape, pure white plumage, superb carriage and fine Wyandotte points.

There are many women readers of AMERICAN POULTRY JOURNAL and they should be loyal to the sex and patronize Mrs. Leonard. Not only this, but all breeders can surely get good bargains by corresponding with Mrs. Leonard. She also has eggs for sale from choice matings.

M. M. JOHNSON, THE INCUBATOR SPECIALIST.

The illustration herewith is a reproduced photograph of M. M. Johnson as the poultry world knows him. He is probably the best known of any man connected with the poultry industry. He is one of the easiest men in the world to get in touch with, and to know him means to be right in the thickest of the poultry atmosphere. Johnson is nothing if not a poultry man. His latest contribution to the industry is his Old Trusty Incubator. The machine was perfected only last year, and sprang at once into highest favor. During the present season the sales have been almost phenomenal. Johnson has a style all his own in advertising and catalogue writing, as well as his own ideas in incubator building. His catalogue, a large work, all written by

himself, is rather a remarkable book. Perhaps not the most elegant, from a literary point of view, but like his Old Trusty machines, it does the work. It convinces. In this connection we cannot refrain from quoting from a recent application for catalogue, H. W. Hubbard, of Custom House, in classic Boston. He says: "I am anxious to possess one of your marvelous catalogues. The book is away ahead of anything of the kind we Yankees of the East have produced. It is worthy a place in our public library." Johnson has a large advertisement of Old Trusty in this issue. It is well worth while for any one interested in poultry to send for and read his 1905 catalogue.

BEE-KEEPING PECULIARLY PROFITABLE.

City people, villagers, farmers—especially the women folk—find bee-keeping fascinating, healthful, profitable. It is not difficult to handle bees properly. Like all other employments that bring excellent returns, bee-keeping needs some study, care and good judgment. Lack of knowledge of the value of honey-bees and a peculiar fear keeps many from this—an occupation that they would like after they had learned its first principles.

There are no secrets about handling bees, but there are methods that come only from experience which the amateur must know before he can succeed.

Men who have made a success of bee-keeping send their practical, every-day experiences to a paper called "Gleanings in Bee Culture." Everybody who gets this paper receives the benefits of these experienced men. "Gleanings" (as this bee paper is familiarly called by its thousands of friends) is published by the veteran bee men, A. I. Root Company, at Medina, Ohio. It is a semi-monthly paper, overflowing with easy-to-read facts about honey, honey bees and their habits. It is a regular course of instruction in the art of setting bees to work so as to bring profit and enjoyment to their owners. It has a question and answer department, where all inquiries are answered free of charge. It

tells how to protect bees from their enemies; warns readers of costly mistakes and tells how to prevent them; explains all the "ins and outs" of the business.

The bee works free and there is every reason why more people should make money with them. "Gleanings in Bee Culture" is authoritative and edited by actual bee-handlers. Over 20,000 people read it now. All our readers can have a copy free by sending their names to the above firm on a postal, or they can have a six months' trial subscription for 25c.

THE VALUE OF A TREE.

Trees are valuable from whatever standpoint. Railroads taking planted lands often pay from \$30 to \$300 each for trees occupying the same, and there have been instances where \$600 in cash was paid for trees standing upon condemned property. It pays to plant trees—all kinds of trees—fruit, shade and ornamental. At Dundee, Ill., is the nursery of D. Hill, the Evergreen Specialist. For more than forty-two years Mr. Hill has turned his attention to this branch of horticulture, and in his Dundee Nursery will be found all the practical varieties of these beautiful trees. His catalogue and bargain sheet will be forwarded free to anyone requesting the same. Address D. Hill, Evergreen Specialist, Dundee, Ill.

"Away Down South in Dixie" is located the Cherryhill Poultry Farm, H. W. Blanks, proprietor, Columbia, La., who makes a specialty of selling eggs by the sitting or by the hundred, from White Wyandottes, White Plymouth Rocks, S. C. White Leghorns, S. C. Black Minorcas, S. C. Buff Leghorns, R. C. Brown Leghorns and Cornish Indian Games. In addition to this he has stock for sale at all times and carries poultry supplies.

100 Per Cent Reports

A PAPER

**\$100.00
Reward**

INCUBATOR

Paper is the world's best non-conductor. 150-egg size weighs 80 pounds. An open incubator; heats up in two hours; two quarts of oil burns thirty-six hours. A zero weather hatcher hatches and raises 100 per cent in high and dry air, mountain climates where all others have failed for the past twenty-five years. Brooder heats up in 20 minutes and incubator in two hours in a cold building; an invention of our own; a natural heat, no hot, dry, baked dead heat, and no baked heat and air like a bake oven. In the past failures were caused by hot air or 99 per cent heat and only one per cent air. This causes dead chicks in shells and in brooders. A hen is no air tight box and has no bake oven heat, there are tons of living air all over the hen and eggs. Our incubators and brooders supply as much air as heat; guaranteed and the air is living not baked, or the life taken out of the air. What is living air? It is the natural moisture in the air. This is the secret of 100 per cent reports. We have manufactured and advertised for eight years and you have never seen our goods advertised for sale second hand. This is a bug in your ear to the wise.

Four manufacturing agents wanted. Two are sold via Pacific Coast states south-west, and an eastern deal is on. We now want to lease in the central west, north, south-east and Canada Mfg. agents. Only \$2000 capital needed. Our coast agent sold over 13,000 in 1904. \$100 reward if you can prove that we received any of our reports dishonest, or that we gave an incubator brooder money, or a free advertisement to our customers in our catalogue for these reports. We can show these letters. We did not even ask how they liked our goods, but they are so happy that they write us of their own free will. Kindly look into this.

A FEW 1905 100 PER CENT REPORTS. Note the Dates, Please.

Armour Packing Co., Dallas, Texas, Feb. 20, 1905. We haven't lost a chick in your brooders in 1904. P. E. Gallot, Supt. Springport, Mich., March 14, 1905. Your brooder fixtures put into a dead trap brooder worked wonders. It raised every chick put in brooder. Rev. Geo. Curtis, Oakland, Cal., Jan. 29, 1905. Every chick was raised in your brooders and one-half grown at twelve weeks old. J. H. Crow, Waverly, Iowa, March 8, 1905. 100 per cent raised, or every chick put in your brooder we raised in 1904.—J. W. Duvall, Fairston, N. J., Jan. 15, 1905. We simply had grand success with your brooders.—F. T. Comstock.

100 per cent hatched and 100 per cent raised on a large scale in California, in the hottest and driest climate at that, away up in the mountains, a 600 acre poultry farm, the largest of its kind in the west. Your Natural Hen Heat Incubators and Brooders are causing a revolution in California. Your manufacturing agents cannot half fill the orders. We have hatched and raised 100 per cent not once but often, and the average was not less than 99 per cent for the season. We have tried all makes manufactured in Philadelphia, Pa., when in the east, and can say you have the greatest invention of the age in incubators and brooders.—Dr. Hodgehead, Prop., G. S. Noddin, Supt.

Decatur, Ind., March 7, 1905. After trying most all makes of incubators and brooders and using your incubators and brooders for three years we are satisfied. You have the best thing yet invented. I never saw chicks grow so. We raised every chick put in your brooders seven times in 1904, and from the start three years ago we raised all or 100 per cent.—Dr. H. C. Keller & Son, Breeder of R. I. Reds.

Decatur, Ind., Poultry farm, Rose Comb R. I. Reds, Feb. 28, 1905. We are happy to state that we hatched 96 per cent and beat all other of the very best makes side by side last May with your incubators and brooders for the past three years. Often raised all the chicks. Talk about fast growing chicks; beats even the hens and all other makes manufactured by 48 per cent. Respectfully, J. Lose.

Send for our 1904 96-page catalogue, Nature and its Laws. Also our 1905 circular is out and is free to you of 100 per cent reports and latest paper open nest incubator. Send 10 cents in stamps for catalogue and circular to our nearest office and factory as follows to save time and freight rates and quick shipment. We are now in a position to fill all orders promptly.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please tell me in your next issue if there is any remedy for chickens with frosted comb if they are taken in time.

C. L. Mebane, N. C.

ANSWER: Frequent applications of carbolated vaseline is the best remedy for this.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following in your Answer and Question columns. I have a fine Wyandotte rooster and his comb and wattles got frosted. Will that effect his efficiency? How can I remove the frozen parts, or will they come off themselves? What causes blood in eggs? Several eggs laid by my Brown Leghorns were nearly full.

J. E. H. Pittsburgh, Pa.

ANSWER: Frost combs does not effect the breeding efficiency of the bird. The frozen parts will come off of their own accord in time; but a little carbolated vaseline applied a few times will assist in healing and brightening up the frosted parts. The presence of blood in the eggs is an indication that some of the small blood vessels of the oviduct

have been ruptured. This is very often caused by the hen straining in her efforts to expel a large egg. Hens in this condition should be fed cooling foods, such as wheat bran and green stuff; but no meat of any kind should be given until the fowl has fully recovered.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following questions in your next issue:

1. Is Cuba well adapted to poultry raising?

2. What is the average market prices of poultry and eggs in Cuba?

Putman, Ill.

B. M.

ANSWER: 1st. Yes. 2d. We have no data at hand at the present time which will enable us to answer this question. Will some of our Cuban readers please answer.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly give me a little information and tell me, if possible, what is the matter with my hens. I have about 250 hens: they seem in good condition. They are fed twice a day. Feed used is corn, wheat, bran, meal, green bone, cabbage and grit. These

hens are kept in two houses, each house is 35 feet long by 8 feet wide. They have a large range. They seem to be very lazy and do not scratch much. I am only getting seven eggs per day from the lot.

Charlotte, N. C.

J. W. Z.

ANSWER: In your zeal to make them lay you have fed them too much, which has caused them to become fat and lazy. Feed them less at a time and make them work for it, by scattering the feed in deep litter.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Can a man raise for market 5,000 chickens per year and keep from 800 to 1,000 hens for laying besides on a lot of 10 acres?

Danville, Pa.

C. H. R.

ANSWER: Yes.

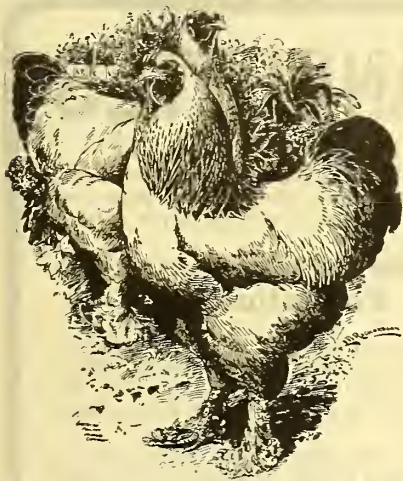

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following question in your "Question and Answer Department:" Have an incubator that hold good temperature, but in taking out eggs to turn and cool the temperature falls very low and is about two hours in coming back to the proper heat. I waste no time in closing door when removing eggs, and wish to know if it is proper for machine to be so long in regaining heat after replacing eggs. The damper has a tendency to blow off before the right temperature is reached, though previous to taking out eggs it had been holding the proper degree. Also is a cement floor suitable for a hennery?

Brookhaven, L. I.

R. G. M.

ANSWER:—This drop in temperature is not the fault of the machine. You keep your eggs out until they become

There is Something to Think About

Before You Buy Eggs For Hatching Please Read Carefully

Don't be hoodwinked into buying cheap eggs. The prices I quote for eggs are as low as I can afford to sell them and send you eggs from first-class, standard bred stock. Any breeder who offers them at a less price must either furnish you with inferior eggs or lose money. I have birds in my yards that are hard to duplicate for quality. **NONE BETTER.** Few as good. **If you want to raise exhibition birds buy eggs from me.** You may order from different varieties if you wish to make up one, two or three settings.

Order direct from this ad and get what you want at prices that cannot be duplicated for the quality. I replace all broken eggs free, and in case 7 in each 13 do not hatch will duplicate the original order at one-half price. Can you ask for anything better than this?

Eggs from the following varieties, \$2 for thirteen, \$3.50 for twenty-six, \$5 for forty, \$8 per hundred, your choice; \$6 per hundred, my choice.

Light Brahmas,
Dark Brahmas,
Partridge Cochins,
Buff Cochins,
Black Langshans,
American Dominiques,
Barred Plymouth Rocks,

White Plymouth Rocks,
Buff Plymouth Rocks,
Golden Wyandottes,
Silver Laced Wyandottes,
White Wyandottes,
Buff Wyandottes,
White Faced B. Spanish,

Black Minorcas,
White Minorcas,
English Red Caps,
S. C. White Leghorns,
R. C. White Leghorns,
S. C. Brown Leghorns,
R. C. Brown Leghorns,

Buff Leghorns,
Blue Andalusians,
Cornish Indian Games,
Black Breasted Red Games,
Silver Polish,
White Crested B. Polish,
Houdans.

Rouen and Pekin Duck eggs \$2 per eleven, \$3.50 per twenty-two, \$8 per hundred. Toulouse and Embden Geese eggs \$2.50 per seven, \$4 per fourteen. Mammoth Bronze and White Holland Turkey eggs \$2.50 per 9, \$4 per eighteen. I put my name under my advertisements and positively guarantee my prices are the lowest, quality considered.

Address

W. H. SHONS

Freeport, Illinois

quite cool and when you return them to the egg chamber they cool the temperature in the machine and of course it will take a considerable amount of heat to get the eggs warmed up to the proper point again. At this season of the year eggs do not require much cooling. The time consumed in turning the eggs is plenty long enough to have them out of the machine. You probably turn the flame up on the lamp which causes the damper to open. Run your machine with as small a flame as possible, keeping the damper open about 1-16 part of an inch. A cement floor is suitable for a poultry house, but must be well covered with straw or other suitable litter.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer in your next issue: How to keep eggs for hatching; how long will they keep without impairing their vitality?

Reelsville, Ind., W. F. A.

ANSWER: Eggs intended for hatching should be kept in a moderately cool, dark place and turned three or four times a week. They may be kept from four to six weeks, and even longer, but from two to three weeks should be the limit.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly answer the following questions in your "Question and Answer Department?" I notice on the heads of several of my hens that the feathers are falling off, and on examination I find that all the feathers are off under the wings, and they keep getting worse, and there are no signs of any pin feathers coming in. What is the cause of this and what is best to do for it? I have tried lard and sulphur,

with a small amount of carbolic acid mixed with it, but it does not seem to stop the feathers falling out.

Hackensack, N. J.

MRS. G.

ANSWER: Keep on using the lard and sulphur. This cannot be stopped at

ALICE WHITE AND HER WINNINGS.

"Alice White" was 1st pullet at Charleston, S. C., November, 1904, also 1st at Atlanta, Ga., January, 1905. She also won at Atlanta the A. W. P. R. Club's special silk ribbon for the best pullet in the show; also Procter & Gamble's special, \$25 silver cup, for best white bird, any age, sex or variety in the Atlanta show. Bred and owned by E. H. Gaines, White Plymouth Rock Specialist, Gaffney, S. C.

once, but will yield to this treatment in time.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer the following in your next issue: I have one turkey hen and I want her to lay

twice before I let her set. Will the eggs she lays first bring good results in hatching if I keep them until she gets ready to set the second time. J. W. B. JR.

Beckville, Tex.

ANSWER:—You will get better results if you put the turkey eggs under a common hen the first time. Eggs can be kept three or four weeks; but stronger and healthier chicks will result if the eggs are not kept over two weeks.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following questions in your Journal:

1st. Will condensed milk take the place of fresh or sour milk for chicks? Will it serve in any degree as a meat diet for young chicks?

2d. How is the best results obtained by mating pullets with their brother or father?

3d. Have a hen with crop full of wind, don't seem to have anything else in it. What is the trouble and relief?

Brunswick, Ga.

F. M. J.

ANSWER: 1st. We have never used condensed milk, therefore cannot say.

2d. By mating pullets with the parent bird. 3d. Hen is trouble with sour crop and indigestion. This can be relieved by feeding her charcoal.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—What ails my pullets? I have 175 and at night, after they have gone to roost, I find one or two that can't get on the perches; their legs lay tight to their bodies and straight out behind and toes curl up. Their bodies shiver. They flop along like a mud turtle. The chicken never stays

HALLOCK'S WHITE WYANDOTTES

Three New York First Prize Winners

Were the sensation of the Madison Square Garden Show, New York, January, 1905. In the hottest class of White Wyandottes ever gotten together (483) they made the following unparalleled record on seven entries.

First Cockerel, First Hen, First Pullet, First Pen, First Collection

Never before was such a record made on any variety in such a hot class. I won \$125 in cash prizes, besides making two record-breaking sales, selling the cockerel heading my first prize pen for \$200, and one of the pullets for \$100. I could afford to sell this cockerel, as I have seven of his full brothers just as good to breed from.

The **HALLOCK STRAIN** has been winning at the large western shows for years. I tell you exactly what prizes I won and where I won them. I do business on the square and guarantee a 50 per cent hatch from all eggs purchased from me. All stock sent out on approval.

HOW I WILL MATE MY PENS

I have mated up seven choice selected breeding pens from which I will sell eggs for hatching at \$3 per 13, \$5 per 26, \$8 per 50 and \$15 per 100. Every one of these pens is headed by a first-class white, blocky male bird, closely related to my New York winners, and I am looking for good results from all of these pens. Every one of the females is chalk white, good shape, good leg color, bay eyes, good combs, short, broad backs, short, well spread tails and extra fine in every section. I do not think there is a breeder in the country who has whiter birds than mine. Have been breeding the same strain for years. Orders for eggs should be made direct from this advertisement. In order to supply the demand for eggs a little better in quality than my average pens, I have selected three of the best from which I will sell eggs during March and April at \$5 per 13, \$8 per 26, \$11 per 50 and \$20 per 100. My strain is noted for its shape and color. If you want eggs from this kind of stock, "You Had Better Hurry."

ROSS C. H. HALLOCK

6314 Clifton Ave., St. Louis, Mo.

that way long; the next morning they seem to be all right.

Will green cut bone supply material for egg shells?

What is the value of burnt bone? My chickens are eating feathers, pulling out on the back at the base of tail feathers and for a 2-inch space have got the tips of the back feathers eaten off.

Conrad, Mont.

C. H. P.

ANSWER.—Overfeeding will very often bring about this condition; also poor ventilation and lack of exercise. Make them work for their feed by scattering it in deep litter. There is very little egg shell material in green bone. Burnt bone sweetens the crop and acts on the liver. Feather eating is caused by lack of exercise, and too close confinement. Try and discover the fowls that have acquired this habit and remove them from pen.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer the following in your next issue: Is red clover good for poultry? Is it necessary to grind it, or can it be cut fine enough?

Letters Ford, Ind.

D. P.

ANSWER.—Clover is excellent for chickens. It can be either ground or cut.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following questions in your next issue:

1. What is the disease called "pip"

in chickens, the cause, how to detect and remedy for same?

2. I killed a four-months-old droopy chicken a few days ago, and upon examination found that the lungs were nearly completely gone and the space was full of hard white worms, about the size of a knitting needle and from one to two inches in length. What was the cause of this and remedy?

Columbia, S. C.

C. M. S.

ANSWER.—"Pip" is a catarrhal inflammation of the mouth, and may be either an independent disease or a complication of certain inflammatory diseases of the respiratory organs. The symptoms consist of the drying of the membrane of the mouth and particularly of that covering the tongue. A hard opaque deposit accumulates along the edges and upon the under surface of the tongue, and may firmly attach this organ to the adjacent parts. The dried epidermis may partly separate from the sensitive tissues, and form a hard shell, which remains attached to the free extremity of the tongue, causing more or less painful constriction and interfering with the movements of this important organ.

This disease arises from any form of local irritation or injury which is sufficiently serious or long continued to set up inflammatory action.

The common treatment, which consists of tearing the dried epithelium off the

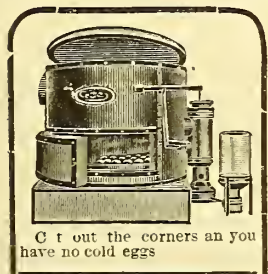

tongue before it has entirely separated by the natural process, is cruel and injurious, often leading to the death of the bird. In case of simple drying of the mouth, it is sufficient to moisten the tongue with a few drops of a mixture of equal parts of glycerine and water. In case there is redness of the membrane, or if the epithelium is beginning to separate, or if a deposit has formed, add twenty grains of chlorate of potash to each ounce of the mixture. An excellent remedy for such cases is made by dissolving fifteen grains of boric acid in an ounce of water. Both of these solutions are harmless and may be freely and frequently applied.

2. We are unable to say what the cause was, but believe it came from an injury, and a fly or other insect deposited eggs in the sore, from which these worms developed.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Kindly answer these questions in your April issue: 1st. If a common male has been running with a pure Wyandotte female will she always be unfit to breed pure birds of her kind from? 2d. If not, how long after a male bird of her own kind is substituted for the common male will the eggs from her hatch pure birds of her kind? 3d. If Wyandotte eggs are hatched from under a common hen will the chicks be as pure as those hatched under a Wyandotte?

At It, In It And Around It 30 Years

Cut out the corners as you have no cold eggs

MR. AXFORD in 1875 received HIS FIRST DIPLOMA on the BEST INCUBATOR. You can't afford to spend your money without getting 1905 CATALOGUE from the oldest manufacturer of incubators and brooders. With 30 years constantly improving and simplifying the AXFORD INCUBATORS and BROODERS, we are now able to put before you a machine not only to hatch the largest percentage of chicks, but with our proper APPLICATION of MOISTURE at all times we guarantee to hatch the largest and healthiest birds. Nothing on the market to compare with our BROODERS in caring for chicks. WE GUARANTEE NO CROWDING. Incubators are built in four sizes, 72-150-200-400 egg capacity. With or without nursery. HATCH and RAISE chicks with one machine, one LAMP at one time. The AXFORD can be placed anywhere, in any room, hot, cold or dry and hatch equally as well. SEND FOR 1905 FREE CATALOGUE.

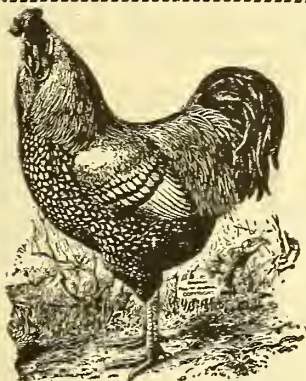

**AXFORD INCUBATOR CO., DEPT. 3
CHICAGO, ILL.**

New Stock For The New Year

Improve the quality of your stock by adding a pair, a trio, or pen of our high grade

PRIZE WINNING FARM BRED POULTRY

Last Fall at various State and County Fairs we won **1628 Prizes**

The stock we sell you is just as good for breeding purposes as our prize winners. We guarantee the purity of the breeding and general health, vigor and conditions of everything we ship. Special prices if you write and call attention to this adv.

Our New Catalogue is in press and will be ready for mailing in a few days. It is the most practical poultry book on the market. No high sounding titles; just plain "Chicken Sense." Write and send five 2-cent stamps for a copy. It will save you money.

HERE ARE A FEW of the breeds shown and described at the special prices.

Light or Dark **Brahmas**; Partridge, Buff or White **Cochins**; Black **Langshans**; Barred, White, Buff **Ply. Rocks**; Black or Mottled **Javas**; Golden, Silver White or Buff **Wyandottes**; Black, White or R. C. **Minorcas**; S. or R. C. W. or Brown **Leghorns**; or Buff **Leghorns**; Buff **Orpingtons**; Blue **Andalusians**; Cornish Indian or B. B. Red **Games**; Pekin **Ducks**; Toulouse or Embden **Geese**; Mammoth Bronze or White Holland **Turkeys**. See catalogue for complete list.

EGGS

We pay as great care to the selection of eggs for shipping as to the mating, breeding and choosing of stock for filling orders. We guarantee all eggs shipped by us to be pure bred and fresh. We pack with greatest possible care. **No better eggs from anyone at any price.** Write us now for what you want and get our quotations before you buy.

The Remarkable Growth of our business has necessitated largely increasing our farm acreage and removing our business offices to commodious rooms in the Seitz Block, opposite Freeport College of Commerce. These changes give us vastly improved facilities for handling all branches of our business. We get our mail every hour and can be instantly reached by Long Distance Phone or Telegraph. Address all correspondence to Freeport. **We have no branches.**

GREAT CENTRAL POULTRY FARMS, The F. W. NIESMAN CO., Props.

Box 40, FREEPORT, ILLINOIS

dotte hen? 4th. If chicks are hatched as late as July fifth, will they grow to be strong and vigorous fowls? 5th. Is rice a good food for chickens, or is it too hard? 6th. Are raw potatoes of both kinds good for chickens if they are cut up small? 7th. Can egg-bound hens be permanently cured, or is it best to kill such fowls and send them to market?

R. F. M.

Washington, D. C.

ANSWER:—1st. This is a much disputed question. Some of our best authorities claim that the influence of the male bird has been shown in the stock the second year. 2d. We believe it would be reasonably safe to use her eggs after she has been laying about two weeks. 3rd. Yes. 4th. Yes. 5th. Yes, but it is rather expensive. Boiled rice is good food for young chicks. 6th. Chickens do not care much for raw potatoes; they are better cooked and mixed with bran and chopped feed. 7th. Egg-bound hens can be permanently cured by the use of sweet oil.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—My neighbor, John Anderson, has four fowls that are the result of a cross between a grade cockerel and a Guinea hen. Is such common, and if so, what are they called? They are vigorous and show much of each parent.

F. W. T.

Lancaster, Ky.

ANSWER.—These are being bred by several fanciers at the present time, but they are not very common. We believe they are unnamed as yet.

Editor AMERICAN POULTRY JOURNAL:..

Dear Sir:—May I avail myself of the courtesy of your columns to bring to the notice of your readers the Hamburg Fanciers' Club, which was started about two years ago and desires to gather into its membership all breeders of any variety of Hamburgs, and stimulate a larger exhibition at our shows of these beautiful birds, and create a wider interest among those who might be encouraged to

breed them. No bird affords more pleasure to the scientific fancier who desires to breed to the standard of perfection. No bird exhibits more grace and beauty in the poultry yard or on the lawn. No bird lays more eggs of such delicious flavor. They are entitled to a larger measure of popular favor.

The support of all breeders is desired

BUFF ORPINGTON.

First prize cock at World's Fair, St. Louis. Bred and owned by J. M. Williams & Co., North Adams, Mich.

and their co-operation will be cordially welcomed. The membership fee is one dollar, as are also the annual dues. It is hoped that those interested will apply for membership to the undersigned.

ROBERT T. PAINE, JR., Secretary.
85 State St.,
Boston, Mass.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Would you kindly answer the following question in your next copy: Could you give the reason for a hen to be laying eggs the size of a pigeon's and

what can I give her to remedy same.

Temple Hall, Jamaica. E. S. C.

ANSWER—The production of these incomplete eggs is an evidence of irritation in the central portion of the oviduct. The hen laying such eggs should be removed from the flock and treated for inflammation of the oviduct. This treatment consists of giving green and cooling food, avoid meat, condition powders, pepper or other irritating ingredients. Keep the bird quiet and administer Epsom salts 20 grains, bicarbonate of soda 2 grains. Follow this with one-half drop of tincture of aconite root three times a day.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following in your "Question and Answer" department: My Wyandotte hens have a kind of sickness that I am not familiar with. There comes a big lump between the beak and eye, as thick as a marble. What shall I do to this?

Somerville, Mass.

H. B.

ANSWER: Read the article on roup on page 236, February AMERICAN POULTRY JOURNAL.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Can you tell me what is wrong with hens when they get so they cannot walk right, but rather stagger forward, sometimes turning a somersault?

J. C.

Belknap, Conn.

ANSWER:—This is probably caused by forcing the hens to lay, or by being confined in damp and poorly ventilated quarters. Look for the cause and remove it.

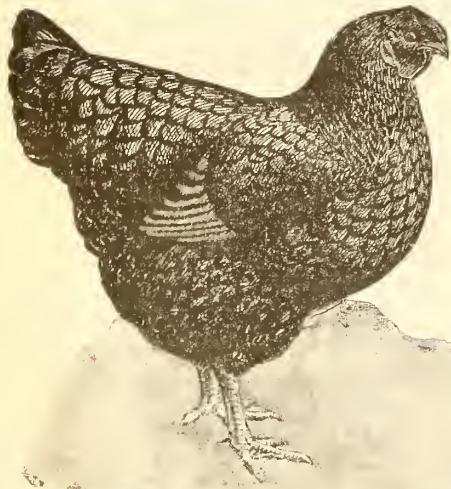

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer through your JOURNAL: Why do hens lay shellless eggs after they have laid good shelled eggs for a while?

B. F. C.

Dayton, Ohio.

ANSWER—This shows a diseased condition of the egg sack and inflammation

23 First Prize Winners at \$3 Each

This is the number reported us hatched from eggs purchased from JONES' WYANDOTTES last season. Now this is a cheap way to start right, with the strongest blood lines on earth. These customers hatched winners that had they bought, would have cost them more than three times this amount.

EGGS FOR HATCHING

If you want the best, and eggs that will hatch winners, as well as the greatest egg producers in the world, then place your order for eggs with

JONES, THE WYANDOTTE MAN

SILVER, GOLDEN and WHITE WYANDOTTES, G. S. and S. S. BANTAMS, thirty-six pens mated to produce best results. Every breeder a line-bred bird, every male a winner with national reputation, the best lot of breeding birds I ever mated in one lot; but why not, they are all line-bred same as our winners. Fourteen prizes at Chicago, 1905, besides our WORLD'S FAIR WINNERS, should be sufficient evidence that the best is found but one place, "THE PINES." EGGS \$3 per 13, \$5 per 26, \$8.50 per 50, \$15 per hundred.

GRAND LOT OF SELECTED BREEDING BIRDS FOR SALE

Send for our 36-page catalogue, handsomely illustrated in colors and tells all about the largest Wyandotte farm in the world, how to mate and produce the strongest blood lines on earth. A book worthy a place in any library. Send 4 cents in stamps for mailing.

Fashionably Bred lot of Scotch Collie Puppies. Also some Imported and American bred brood bitches for sale.

R. E. JONES, "The Pines"

Box 5, Paducah, Ky.

of the shell-forming chamber of the oviduct which no longer secretes calcareous matter. As treatment in these cases, it is sufficient to remove the cause. Give the fowls plenty of shell-forming material, such as wheat bran, crushed egg shells, cut or calcined bone, broken mortar, crushed oyster shells, etc. Give green food and avoid the causes of inflammation of the oviduct.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Can you tell me in your next JOURNAL how much it will cost to feed one hundred Plymouth Rock chickens until they will dress six pounds apiece? Which will pay better for market, chickens or turkeys? E. D. Parathon, N. Y.

ANSWER:—If you are in a position to raise the greater part of your feed, the cost will be greatly reduced, and will be only about 20c apiece. Chickens will probably pay better than turkeys, as the demand is greater and the cost of raising much less.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly answer in the "Question and Answer Department" if it is advisable to line chicken coops with tar paper. I am going to keep three strains: two for eggs and one for market. What kinds would you advise me to keep? P. J. L.

Wellsburg, Mo.

ANSWER:—Tar paper is one of the best things you can use in lining a chicken coop. You must use your own judgment in selecting your varieties. We never advise or say which is the best.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please tell me the best method of "breaking up" a setting hen? Masa, Wash. MRS. H. D.

ANSWER—Confine the hen in a small, dark coop for a few days. Do not give her anything to sit on except the bare floor, and she will soon get over the desire to set.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—I would like to know through the columns of your JOURNAL what remedy to use for a chicken in the following case: She stoops down and turns her head back over her body, and

continually turns her head from side to side and appears to be in a dizzy stupor, otherwise there seems nothing wrong. Her comb and head look healthy. W. F.

ANSWER—The symptoms indicate congestion of the brain, brought about by irritation of the intestines by parasitic worms. A few drops of turpentine will probably remove the cause.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer through your columns the following questions: How

about them as a feed for eggs.

Pratt, W. Va.

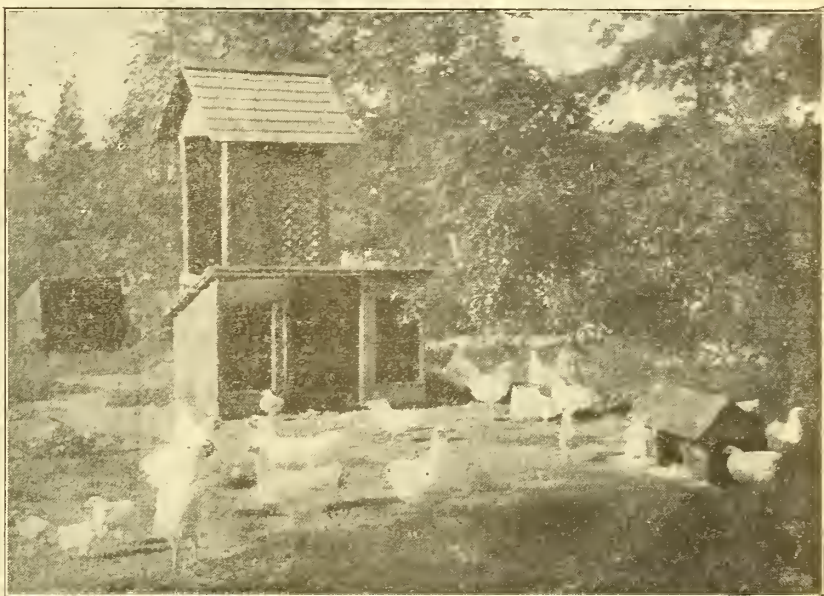

W. D. W.

ANSWER.—From 500 to 800 hens can be kept on a lot of this size. Roasted egg shells can be fed to fowls with profit to the owner.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer the following questions in the columns of your valuable paper:

1. Is rape a good green feed in winter? If so, how raise and prepare to use and how fed?

Pedigreed White Plymouth Rock chickens on the poultry farm of Victor D. Caneday, Box A, Taylor's Falls, Minn., where the young stock have the advantages of free range, abundant shade, airy coops and a correct system of feeding. The open air weaning coop in the center of the picture is 3x6 feet on the ground, 2 feet high in the back and 3 feet in front. The front is of inch mesh wire netting, and makes very satisfactory quarters for growing stock in summer and fall. A dry feed hopper is shown to the right of the view, and a brood coop in the background of the style in general use on this farm.

many Wyandotte hens is it practical to keep on a 1½-acre lot where egg production is desired? Is there any virtue in roasted egg shells for hens? I have been feeding them to my hens and they seem very fond of them, but I have never read in poultry journals anything

2. Will canvas or burlap take the place of glass? Will it let in light and keep in heat and the cold out? Would it be more healthful to birds?

3. Is one cock to fifteen hens too many for best results with the Single Comb Buff Orpingtons?

Glenwood Poultry Farm

ARE YOU LOOKING for CHOICE BIRDS?

...WE HAVE PRIZE WINNERS...

We have won hundreds of premiums this fall, which shows the quality of our stock. We have hundreds of choice birds to sell eggs from, of the following varieties:

Light Brahmas,
Buff Cochins,
Partridge Cochins,
White Cochins,
Black Cochins,
White Wyandottes,
Golden Wyandottes,
Silver Wyandottes,
Buff Wyandottes,
Cornish Indian Games,

Rose Comb R. I. Reds,
Barred Rocks,
Buff Rocks,
White Rocks,
Mottled Javas,
Red Caps,
S. G. Dorkings,
White Langshans,
Black Langshans,
W. C. B. Polish,

Golden Polish,
Black Minorcas,
White Minorcas,
S. S. Hamburgs,
Black Spanish,
Blue Andalusians,
R. C. Brown Leghorns,
R. C. White Leghorns,
S. C. Brown Leghorns,
S. C. White Leghorns,

B. B. Red Games,
Buff Leghorns,
Buff Cochin Bantams,
Golden Sebright Bantams,
I. P. Ducks, Rouen Ducks,
Indian Runner Ducks,
Toulouse Geese,
Emden Geese,
M. B. Turkeys,
W. H. Turkeys.

Send 10 cents for our illustrated catalogue, which describes all varieties and gives prices on stock and eggs. Send us your order if you want fair treatment, as we can please you. We can boast of having as many pleased customers as any breeder. All our stock is standard bred and healthy, and we will please you or return your money if not satisfactory.

GEO. P. HARTMAN & SON

BOX D 193, FREEPORT, ILL.

4. How much floor space should be allowed to each fowl? How much yard space?

5. Will you please tell me weight of the S. C. B. Orpingtons? A. P. B. Bloomington, Ind.

ANSWER—We have never heard of rape being used as green feed.

2. We do not advocate the use of canvas or burlap in place of glass, in a cold climate.

3. One cock to fifteen hens is sufficient, if they have plenty of range.

4. Ten square feet. Twenty square feet at least, and more if possible.

5. The weights and other points of the Orpingtons will appear in the new Standard as soon as published.

Editor AMERICAN POULTRY JOURNAL:
Dear Sir—Please answer this question through your JOURNAL: What is the

matter with my turkeys and what can I do for them? They swell up under the eyes and finally their eyes close; they have no appetite and soon die.

Felton, Minn. E. M. C.

ANSWER—Read article on roup in the February number of AMERICAN POULTRY JOURNAL.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—If a beginner would buy eggs from several of the best breeders, and from each sitting, get a good bird, then select the best and mate, what would be the result of the mixed strains on the offsprings? H. W.

Corydon, Ind.

ANSWER—It is hard to say just what the result would be; but we believe it would result in a fine strain of fowls.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly tell me what you think a good book on poultry diseases, treatment and remedy. Also, is there an instrument or machine to test the fertility of an eggs before hatching and where can it be procured?

Troutville, Pa. H. N. S.

ANSWER—The Diseases of Poultry, by Dr. Salmon. Price \$1.50, for sale by us. We know of no machine for testing eggs.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please let me know in next issue how long after turkeys mate until they lay and how long after one litter is out until they will lay again.

Clinton, Tenn. F. R. M.

ANSWER—This all depends upon the care and treatment given the birds.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer the following questions: 1. Which is the best breed to raise for caponizing purposes?

2. Does the American Standard of Perfection teach you how to judge all breeds of fowls and does it contain any other information beside judging fowls? Chicago, Ill. J. L. P.

ANSWER—We never say which is the best variety of fowl for any purpose. The American Standard of Perfection tells how to breed all varieties of fowls, and no one can raise exhibition fowls without it. Price of the new revised edition is \$1.50. Orders are now being booked by us, to be delivered as soon as printed.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Give me a remedy for feather eating. Is rice a suitable feed for chickens in a warm climate?

Pascagoula, Miss. J. B.

ANSWER.—Feather eating is generally caused by too close confinement. Once this vice is acquired by a fowl it is almost impossible to break them of it. Free range and plenty of work is the best remedy.

Rice, in moderate quantities, is very good feed for chickens.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please tell me what is the matter with my chickens? They mope around and wings droop and they get light in weight and die.

Sunberry, Ohio. B. F. M.

ANSWER.—The main trouble with your fowls is lice. Thoroughly clean and whitewash your poultry house and dust your fowls twice a week with some good insect powder.

Amatite

ROOFING

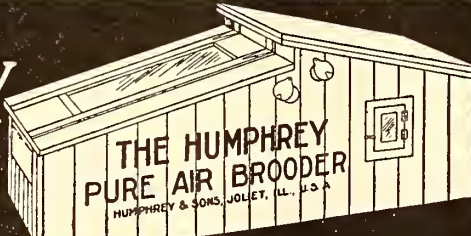

No wet, no mold, no rot under AMATITE.
It's made to keep things dry and tight, and does it better than any other Ready Roofing.
With a hammer you can put it down yourself.
We send with each roll cement and nails sufficient for the job. No expensive help required.
Once on, you forget you have a roof—no leaks, no repairs—just solid satisfaction.
Free sample upon request.

INVESTIGATE

THE HUMPHREY PURE AIR BROODER

THE HUMPHREY PURE AIR BROODER
HUMPHREY & SONS, JOLIET, ILL. U.S.A.

READ THESE FOUR LETTERS.

First Order—FOUR Humphrey Pure Air Brooders.
Humphrey & Sons, March 21, 1904.
Gentlemen:—Enclosed find draft for four out door Pure Air Brooders. I have always wanted a brooder with the lamp in the center. I have been offered brooders for less money, but your plan seems to me to be right, and especially the pure air feature. Forward as soon as possible. Respectfully, MRS. T. J. JOSEPH.

Second Order—ONE Humphrey Pure Air Brooder.
Humphrey & Sons, April 21, 1904.
Gentlemen:—Not long ago I ordered four Pure Air Brooders which have arrived all right, but now I find I need another and enclose my draft for it. Please rush. Respectfully, MRS. T. J. JOSEPH.

Third Order—EIGHT Humphrey Pure Air Brooders.
Humphrey & Sons, Jan. 31, 1905.
Gentlemen:—Enclosed find check for eight brooders. I had fine success last season with your brooders; hardly lost any chicks. The center over head heat and pure air is the thing. I wish you success. Respectfully, MRS. T. J. JOSEPH.

Fourth Order—EIGHT Humphrey Pure Air Brooders.
Humphrey & Sons, March 7, 1905.
Gentlemen:—Please forward me eight more Pure Air Brooders. Enclosed find draft for same. I am more satisfied than ever with your brooder. They are just what poultry raisers want and will have when they get to know them. Respectfully, MRS. T. J. JOSEPH.

**How Are They Coming?**

I know you are not getting the chicks you should get out of your good eggs if you are plodding along with some of the incubators and brooders I have tried. The trouble is that most incubators and brooders are not practical, common sense, every day working machines. I worried along with them a good many years, for I have raised poultry for profit all my life. They kept me always experimenting. The machines were not dependable. When I had all the "experiences" I wanted I perfected the

Ideal Incubators and Brooders

I made them so that they stopped the frightful waste of eggs I had always experienced. They saved my time. They made my hatches dependable and did away with the constant worry about heating, ventilating and regulating. A good many thousand people have bought Ideal Incubators of me—more last year than ever before. What they say of their success is interesting reading to poultry raisers. They all bought on

Thirty Days Free Trial

I'm always glad to send them out that way because they're always just as good as sold. I have gotten out a grand new book this year—a combination Incubator, Brooder, Poultry and Poultry Supply book. I believe it saves money and makes money for people engaged, like I am, in the poultry business. Write to me at once and let me send a copy. It costs you nothing, I'll pay postage.

Whitby, Ont., Can.

DR. J. J. HARE, Prop. President of American Buff Cochin Club.

VANATTA'S S. C. W. LEGHORNS Are Still in the Front Rank

They prove their merit and sustain their world-wide reputation by winning more premiums at
the St. Louis World's Fair, Oct. 24 to Nov. 5, 1904, than were won by any other breeder. We won
in every class in which we showed birds. In World's Competition 7, 9 cockerels, 2, 8 hens, 2, 6, 9
pullets, 3, 4, 8, 10 pens. Missouri Competition 1, 2, 3 cockerels, 1, 2 hens, 1, 2, 3 pullets, 1, 2, 3 pens.
From National S. C. W. Leghorn Club, 2 hen, 2 pullet, 3 pen. No cock birds shown. Total cash
winings \$100. EGGS FOR HATCHING, finest exhibition matings, \$5 for 15 eggs; \$9 for 30;
\$25 per 100. Good utility matings, \$1.50 for 15; \$7 per 100; \$50 per 1000. Illustrated catalogue free.

E. E. VANATTA - R. F. D. No. 8, Vandalia, Mo.

HOUDANS!

For more than thirty-one years Rigg's strain of Houdans has been the acknowledged
standard of Houdan excellence by all Houdan breeders and exhibitors at ALL the
leading shows of New York, Boston, etc., have drawn largely upon this strain. The
record made by the Rigg strain during all these years has never been approached
by any breeder.

Mr. Thos. F. Rigg, Iowa Falls, Iowa. Driftwood Farm, Girdletree, Md., Dec. 17, 1904.
Dear Sir:—In 1898 I obtained in Colorado three Houdans that were purchased of you. I
took them to Brazil, where they were practically unbeaten by the best English strains, to
say nothing of breeding a lot of youngsters that hustled their Minorcas in egg production.

WALDO KENNARD.

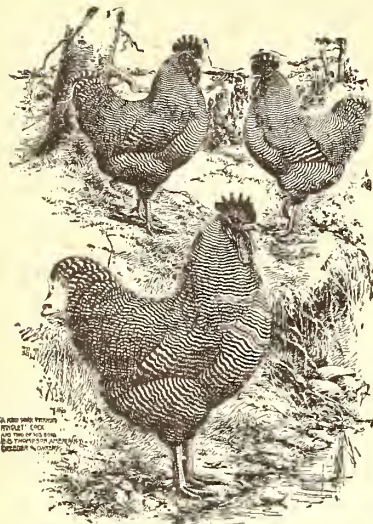

This is the kind YOU want the large, vigorous, egg-producing, show winning kind,
More than 31 years of careful, systematic, line-breeding has given us this magnifi-
cent strain of Houdans.

EGGS FOR HATCHING THAT WILL PRODUCE SUCH STOCK

We have no special pens in reserve for ourselves and other pens for our customers.
The same pens that supply us with our many winners and magnificent breeding
birds, supply our customers with eggs. Price of eggs \$3 per setting, two settings \$5.

THOS. F. RIGG

IOWA FALLS, IOWA

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

A "Ringlet" 1st Prize New York Cock and two of his Sons.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

LAYERS ARE PAYERS

Lousy hens do not lay so well—the lice worry them, sap their vitality, make them weak and unproductive. SCHILD'S LIGHTNING LICE

**THE
HAPPY HEN
IS THE
LAYING HEN**

KILLING MACHINE instantly rids fowls of lice. No choking—no smothering—no spoiling of plumage. Largest turkey or smallest chick handled with ease. 100 hens or 300 chicks thoroughly cleaned in 60 minutes. Simply put fowls and powder into the machine, turn the crank a few times and it's done. Let us send you full particulars. Our Lice Murder is the best thing out for cleaning Poultry Houses of mites—easy to apply—leaves 'em dead in piles. We make poultry bits too—keep birds from plucking out feathers. Send for catalogue. CHARLES SCHILD CO., 301 Detroit St., CLEVELAND, O.

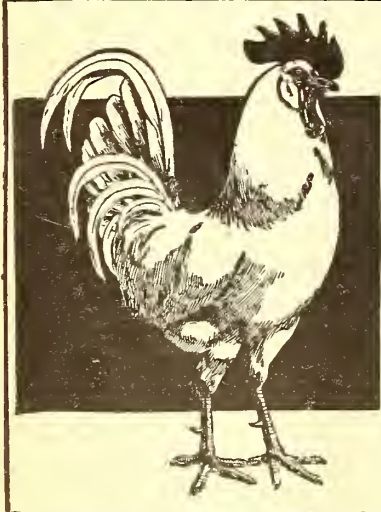

We Can Teach You How to RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of Instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

A MASTER-STROKE OF FOLLY

Made by the President, G. M. Curtis, the controlling factor in the Cyphers Incubator Co.

A Reply to the Cyphers Incubator Company's Advertisement in the April Poultry Journals, entitled, "A Fair Warning to All."

This advertisement is a quibble, deliberately worded to mislead, and is entirely false and slanderous, designed to divert trade from a competitor whom they have tried to put out of business by many foul and dishonorable means.

The Adair affidavit published in their statement is designed to make the public believe that he had a patented thermostat which he had sold to the Cyphers Incubator Company, and which the Model thermostat infringes. The records of the patent office shows that Adair has never patented such a thermostat.

The Davis affidavit is intended to be construed that he had made the Model thermostat while in the employ of the Cyphers Incubator Company, and that company had derived some right from Davis; while, in fact, it was made while Davis was in my employ on experimental work in the Model factory, and at my expense, and all rights were legally assigned to me by Davis when the application for a patent upon it was made. Davis, therefore, had no rights to relinquish, and the Cyphers Incubator Company's pretense that they hold any rights from Davis is a deliberately false statement.

The Curtis affidavit states that they are vigorously prosecuting the infringement proceedings instigated by them on patent No. 530,163, while, in fact, they waited a year after I began the manufacture of the Model Incubator before bringing suit, and had not put in any evidence in their suit to substantiate their claims at the time the affidavit was made. Yet they are using the suit to intimidate my customers.

A DELIBERATE AND MALICIOUS LIE

The further statement that the Model thermostat which is illustrated in their advertisement is the "sole property" of the Cyphers Incubator Company is a deliberate and malicious lie. This manner of attempting to deflect my trade is one method of stealing. If G. M. Curtis, President of the Cyphers Incubator Company, who makes the affidavit and represents the controlling interests in that company, will prove in any court of law the following alleged facts or claims made in the advertisements referred to, I will pay

\$5,000.00 to the American Poultry Association

First—That the Model thermostat infringes any patent that the Cyphers Incubator Company has upon the Adair thermostat.

Second—That Adair or the Cyphers Incubator Company have any patented rights in the thermostat illustrated in his affidavit.

Third—That the Model thermostat illustrated in the Curtis affidavit is the "sole property" of the Cyphers Incubator Company.

Fourth—That the Cyphers Incubator Company had, at date of affidavit, March 15th, put in any evidence to substantiate their claim of infringement of patent No. 530,163, mentioned in their suit, which was brought in October, 1904, and which the affidavit states was "being vigorously prosecuted."

This challenge is open to the Cyphers Incubator Company or its President, and if my statements are

not correct they can establish them as false in a court of law, where facts only are considered and lies are branded with the contempt they deserve.

MALICIOUS PROSECUTION

Before I began manufacturing the Model Incubators designed by me, I obtained the opinion of the highest patent authorities that I could employ, that my Model Incubator was not an infringement of any patent, and especially of the Cyphers Patent No. 530,163. I have the written opinion of Osgood & Davis of Rochester, N. Y., patent attorneys for the Cyphers Incubator Company, that the Cyphers patent is exceedingly narrow in scope, and that it could not be construed to cover the use of porous diaphragms as used in the Cyphers Incubator, which is the issue of the lawsuit.

This opinion by the Cyphers Incubator Company's attorneys was given them a year previous to my withdrawal from that company, and shows that their attorneys were then dishonest in giving it or that the company is now maliciously prosecuting the present suit only to intimidate my customers.

WILL GIVE BOND

This malicious attempt to libel and blackmail my customers from buying incubators from me must fail when these facts are known. I expect to stay in the incubator business, and will most certainly protect every one who buys my incubators from any patent suit or other action which may cause them annoyance or expense. If any purchaser of a Model Incubator has any fear or uneasiness in regard to my right to manufacture and sell the Model, or that it is an infringement upon the Cyphers patent or any other patent issued, I stand ready to give a bond to indemnify and protect such purchasers against all damages, costs, or expenses on account of any infringement or action or proceeding in law or in equity, which may be brought against any purchaser of the Model Incubator on any letters patent owned or controlled by the Cyphers Incubator Company or any other person, firm, or corporation.

Until their present patent suit is dismissed, it is probable that the Cyphers Incubator Company will continue their libelous and blackmailing methods to intimidate intending purchasers of the Model Incubator. I shall take active measures to see that they do not purposely delay the prosecution of that suit and thus terminate their only means of blackmailing my trade.

I WANT YOUR HELP

I am advised that I have no redress or remedy in prosecuting them for damages or restraining the publication of their slanderous and libelous advertisements, as our courts hold that a publication of a libel cannot be enjoined by injunction. I can only proceed against them when I can prove special instances of intimidation or threats by the Cyphers Incubator Company, their agents, or representatives. I will suitably reward any person furnishing me proofs of such threats or intimidation that I may proceed directly against them.

A WINNING COMBINATION.

Some Interesting Facts and Figures Regarding the Income Which May Be Derived From a Small Tract of Land Devoted to the Production of Poultry, Eggs, Vegetables and Fruits—One Man's Actual Experience—A Business in Which the Demand Is Always Greater Than the Supply—Advantages of Such a Life.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

We have before us three letters from persons who wish us to give them some information as to how to equip and manage a suburban poultry and vegetable farm. As the poultry and eggs of commerce—the food supply of the people—must be largely produced upon the farms these questions are opportune and the matter one of great importance.

The question of the production of the food supply of the masses is daily becoming more important. The nation's population is rapidly increasing. The non-producing element is increasing in numbers more rapidly than is the producing element. The towns and cities are receiving annually a very considerable portion of the young men and women of the country districts. These people in towns and cities do not produce any of the food supplies necessary to their existence. They are consumers. They must be fed. The product of the poultry yard—the fowls and the eggs are as staple in the home kitchen and upon the table of the rich and the poor—all classes—as is flour. All people must have them.

It would seem, therefore, that the production of fowls and eggs would be a very profitable undertaking. The man who daily has something to sell which the people must and will have is in a position to do a sure and profitable business if he will give it the proper care and attention.

Now, as to the questions of our correspondents. Two of the three wish to conduct the business, in a small way, comparatively, upon small farms, near town. They wish to so equip a few acres of ground that the place will yield them a comfortable living and allow them to place a little money in the savings bank each year.

It is impossible for us to tell these people, in detail, how best for them to do, for we cannot know their situation in detail. Let us consider the question in its broad scope.

We know beyond all doubting that the right man can not only derive a good living, but can yearly lay by a nice sum of money by properly caring for five acres of ground. This man must be a hard worker, a student and a thinker. The yield possibilities of an acre of productive land are wonderful. Intense farming is now the order of the day. The men who are making the money are the men who are farming a few acres intensely, not the ones who are improperly farming many acres.

Five acres of land, properly handled, will yield something which can be sold every day in the year at a good price for cash.

Let us cite a case. This man has six acres of ground, all told. His gross receipts from sale of poultry, eggs, vegetables and fruit, for 1904, was as follows:

Poultry (market and feeding stock).....	\$318.00
Eggs	204.60
265 bushels strawberries.....	628.00
50 bushels raspberries.....	186.00
75 bushels blackberries.....	150.00
50 bushels apples.....	30.00
60 bushels plums.....	90.00
60 bushels early cherries.....	84.00

20 bushels gooseberries.....	40.00
8 bushels currants.....	16.00
400 bushels sweet potatoes.....	240.00
1,200 pounds grapes.....	28.00
60 bushels potatoes.....	36.00
100 bushels turnips.....	20.00
Asparagus	31.50
Tomatoes	12.00
Small vegetables	44.50
Early peas	21.60

Total.....\$2,180.20

All these products were sold in a market not the best—the small town market. This with the exception of the poultry shipped as breeding stock. If this man lived near a large city he could have secured far better prices for his products.

The question which our correspondents would like to have here answered is, "How did he do it?"

By work—work of hands and brain!

What he has accomplished can be accomplished by others. By you.

His stock of poultry consists of one of the American breeds. He chose the variety because it is one which gives him the best market poultry and a goodly number of eggs. He did not expend money unnecessarily in buildings. He built cheap but good houses. He started with a few head of poultry. He secured customers for his output and made it a rule to supply them with the best possible goods. He so managed his business that every customer had full confidence in him. He gave them something extra good, put up in extra good shape, and charged a fair price for it.

With his fruit and vegetables it was the same. He appealed to people's taste for the best, and put up his fruits and vegetables in the most attractive form.

He has found the combination—fruit and poultry—a good one. There are parts of this little farm upon which the poultry is not allowed to run at will. The vegetable garden is open to the little chicks until they get old enough to do it damage. For the first few weeks of their life they are a benefit to the garden, and thrive on the bugs and worms they secure from the soil. They destroy many injurious insects. Thus the vegetable crops as well as the chicks are benefited. When removed from the garden the chicks are placed in the currant and raspberry patch. Here is an ideal place for them—plenty of shade and mulch, an abundance of worms and insects. They do not injure the fruit. Grown fowls would. The growing chicks are allowed full liberty of the asparagus patch and insure a good annual crop by keeping the troublesome asparagus beetle at bay. No fowls or chicks are allowed in the strawberry patch.

The yards where the fowls are kept are planted to fruit trees.

This man has not given the sale of breeding stock and eggs much attention, but will in the future take up that part of the work. He will succeed in this branch of the work, because he is one who would succeed at anything he undertook. And he does it by the simplest process in the world—just "works and thinks it out."

It has taken time to bring this little farm to its present productive condition. The man has been a student as well as a worker. The reports and findings of the government agricultural and horticultural department and state experiment station reports have been carefully studied. The poultry papers have been read thoughtfully.

The land cost \$100 an acre. The house, as originally built, cost \$1,200. The barn and poultry houses represented an expenditure of \$450. The place contained no fruit trees or small fruit plants.

The original setting of trees, plants and shrubs, cost of land, etc., was as follows:

Land.....	\$ 600.00
House.....	1,200.00
Barn and poultry houses.....	450.00
Apple trees.....	12.00
Raspberry canes.....	10.00
Strawberry plants.....	50.00
Plum trees.....	12.50
Cherry trees.....	7.50
Gooseberry and currant bushes.....	5.00
Grape vines.....	15.00
Asparagus roots.....	12.00
Total.....	\$2,374.00

In addition to the sum derived from the sale of the products of the place, the family has derived its living from the land. The children have been receiving a desired education.

We have not credited the land with the milk and butter derived from the Jersey cow, nor the pork which the hogs supply annually. These products have been largely consumed by the family, and represent considerable value.

BARRED PLY. ROCK COCKEREL.

This cockerel is at the head of pen No. 6 in the yards of C. C. Randleman, Ramseur, N. C.

This family have lived well. They have had the best of everything—fruit and vegetables, poultry and eggs. All are happy and in the best of health. The bloom of health is on the cheeks of the wife and children. The husband is content with his lot, his desire being, of course, to cause the place to yield more heavily each succeeding year.

Examine these figures in a cold business way, and you will find that as a business venture this little farm deal has been a great success—measured solely by business rules. But that is not the best reward that has come to this father and mother. They and the happy, romping children have been living near to nature, in God's sunshine and pure air, and the trees and the flowers and the fruit and the birds have daily been preaching to them the sermons which tell of God's goodness to man.

In the future we will find that such farms will be more numerous than they are now, because the demand for the products of such farms will be greater.

It is a business proposition well worthy the careful consideration of all who have a liking for such a life.

THOS. F. RIGG.

SUCCESS WITH BROODERS.

Some Valuable Hints on the Successful Rearing of Chicks in Brooders.

Success with brooders, as in any other line of business, demands some experience. Many people read the glowing articles written and wish to start into the poultry business who have seldom seen a chicken, old or young, except as it came from the market ready dressed for the table. To such I would say go slow. Procure you a half-dozen or more hens of as little value as possible, let them be healthy and good layers, then make brooders out of these. Read all you can about chickens, and learn all you can from your chickens, yet if you kill half of your flock your loss is small, and if your taste for the business continues the experience gained is invaluable.

Now, when you have some knowledge of chicken life procure a brooder. A home-made one does very well to experiment with, provided it is a good one—that is, one which you can regulate the heat as needed, provides some mode of ventilation and has good light so the chickens may have the sunshine. Have your brooder roomy, so your chickens are not forced into outside runs in order to turn around. Have a small hover in your brooder since it is chicken nature to cuddle under such to sleep and rest, but do not have more than from a fourth to an eighth of your warm space taken up.

I like top heat from hot-water pipes best, yet I have had excellent success with just jugs filled with boiling water placed in a closed box with one glass window when this was kept in a room slightly warmed during very cold weather. Then I have used warm, dry air for heat, which was so arranged that I produced side heat principally, although a portion of the heat passed over head, while at the same time the floor was never cold. I could find no fault with this so long as I did not overcrowd my brooder.

I have been accustomed to growing chickens the greater portion of my life and have been experimenting with brooder for the past three years; also, I have been watching the experience of others. When I have had but small broods I raised my chickens nearly without loss, but when I approached the number of chickens my brooder was supposed to care for I had to watch night and day or there was trouble.

When small broods were under the hover at night and the temperature lowered towards morning, as is its habit, my pets cuddled together and were warm and happy in Mother Nature's own way, with the heat from their own bodies added to that coming from the now feeble lamp, and came to breakfast as happy and hearty as though I had slept with the regulator in my fingers.

It was quite different with larger broods. When the temperature lowers but slightly the outside ones begin to crowd to the center, which is already full. The little ones are never thoughtful about stepping on each other, but seem to prefer hovering two or three deep provided each can stand on the top of the pile. The consequences are that those trampled down are killed, while those remaining are so piled up they sweat until it weakens them, making them catch cold. These come to breakfast with colds, followed by bowel trouble and puny dwindlings or death as a result not of wrong heating or wrongful feeding, but of overcrowding. There are many articles written about brooder chickens, but all lead one to suppose that he must expect much loss in brooding as much anyway as with the mother hen.

My experience does not agree with this. The loss of good, healthy chicks may be reduced to a merely nominal number when proper attention is given to space, heat, ventilation, cleanliness and proper feeding. Men and women have been giving us the benefit of their knowledge and experience in new inventions until as far as heat, ventilation and cleanliness are concerned there seems nothing to desire, and yet that the greatest success is not attained, none will deny. All realize without question that chickens as well as children depend upon the oxygen in the air for breath, hence the air in the brooder must be continually renewed and the carbonized air as continually removed. It is just as well understood that the brooder must be kept so thoroughly clean that no offensive odor strikes the most sensitive nose. Most people believe that top heat, which is as nearly regular as modern appliances, will make it, is best, yet in the last number of my POULTRY JOURNAL I see the call for something better in the way of heating. I believe that the heating of brooders is as nearly perfect now as it will ever be. While the cry is for better heating, it should be for better spacing. The proper space allowed each chicken is the least understood.

First twenty-five, but never more than thirty-five, chickens

should be placed in one brood, and they should have as much floor room as is usually allowed to a hundred chickens. Methinks I see some good brother or sister poultryman hold up their hands in horror at the extra expense that would entail. Well, friends, it can be arranged with no more expense than formerly if brooders are constructed with that thought in view. All realize that the greatest loss is from overcrowding and tramping down of chickens, and the overheating, as a result of the crowding, which in turn is the mother of colds and bowel trouble in brooder chickens. Those who have had my experience with as few as twenty-five chickens in an ordinary sized brooder built for a hundred will tell you they never saw chickens grow as fast nor do so well in the same time under any other circumstances.

The only question in the minds of the people is the cost of

temperature with no check in growth or loss of vitality. The next point is absolute cleanliness. With such large runways for my chickens, littered with chaff, cut straw cleaning from once to twice a week is all that is required to keep them pure and sweet smelling. We have our brooder well heated when our chickens are hatched and quietly place about twenty-five in a brood under each hover and leave them entirely alone until from twenty-four to thirty-six hours old, or until they show a desire to eat.

Pure, fresh water must be before them at all times, supplied in some kind of a drinking fountain. No difference whether patented or home-made, just so it keeps the chickens dry outside and wet within. Chickens never thrive so well if allowed to get their feathers wet while drinking. I feed rolled oats for the first few days, placing just what they will pick up clean on

WHITE PLYMOUTH ROCKS, AS BRED BY U. R. FISHEL, HOPE, IND.

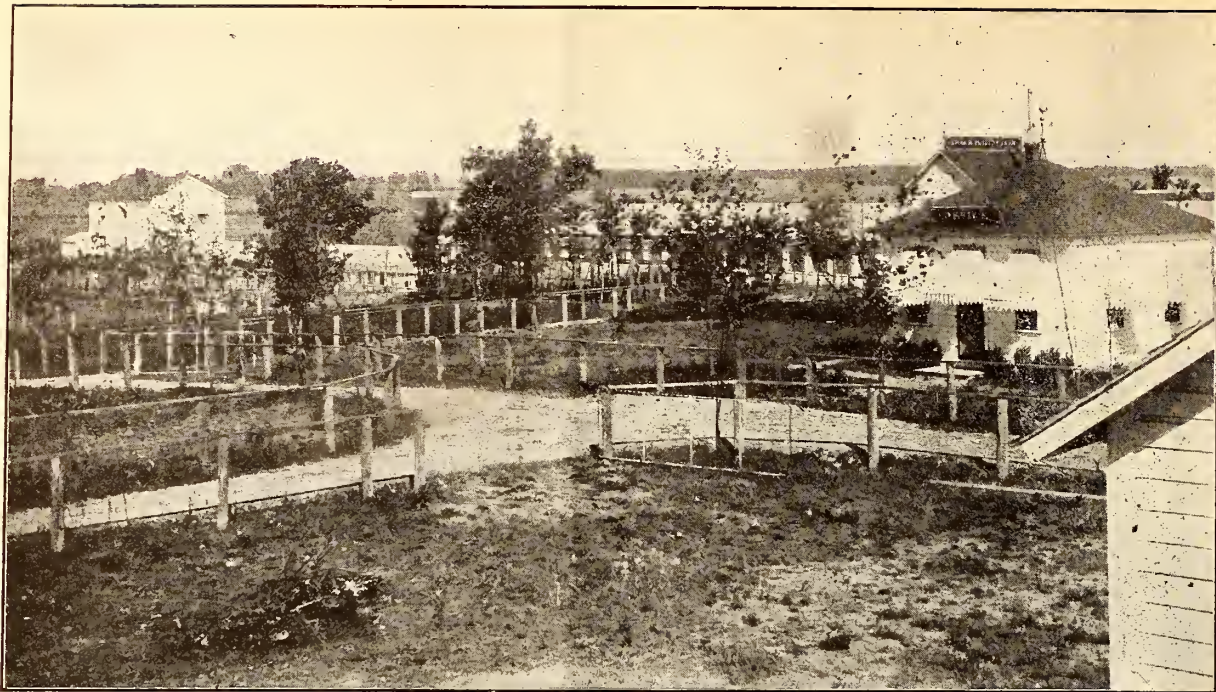

the heat and the amount of floor space taken by the ordinary sized brooders to accommodate many chickens with so much space allowed each twenty-five. I shall raise my chickens this season in a brooder built with the thought of greater space and very small broods in view. My brooder will accommodate two hundred chickens and will cost but very little if any more for heat than the brooder in common use now, nor will it take up more than three square feet more floor room. I use hot-water heating and good ventilation with no direct draft to chill my chickens, and expect to raise every chicken hatched with sufficient vitality to live under any possible condition.

The care, other than feeding needed by chickens so accommodated, is very small, and after the first few days it should be gradually reduced so they may become accustomed to lower

their feeding pans every two hours at first.

After they are somewhat older five times a day will be often enough to feed; that is, early in the morning, middle of forenoon, noon, middle of afternoon, and just before they go to roost at night. When the chickens are from three to five days old, I alternate my oatmeal feeds with bread baked from cornmeal mixed with milk to which salt and soda are added to make it light and healthful. I sometimes use equal parts of cornmeal, wheat bran and shipstuff. While this seems a better balanced ration, it does not crumble so readily and more of it must be moistened with water before it can be fed, hence I do not like it so well as a regular feed and take the place of the bran and shipstuff as much as may be with other things.

As soon as the chickens are through eating, the trays should

Scenes on the Emma B. Poultry Farm, Gurnee, Ill., showing office, nursery and hot water brooding house.

be removed and a few grains of millet or other small seed that chickens love scattered in the floor litter for the baby biddies to scratch for. In from ten to twelve weeks the oatmeal may be entirely left out and its place taken by cane seed, cracked wheat and corn.

It is chicken nature to grind their own food, therefore, I think, we cannot be too careful to give them this goodly portion of pure grain. After they are six weeks old it ought to be supplied them in self-feeders, as they can eat all they want as often as they desire without wasting any feed, yet they must have soft feed added each day if we wish to crowd them ready for market as profitable broilers. All our conditions must be as nearly natural as possible, therefore we must give them teeth. The first two weeks give pulverized egg shells on their feed trays not with their feed, but alone. A little pan of seed and fine gravel placed in one side of the run is very good. Some advocate mixing grit with the feed, but since it is chicken nature to eat grit, instinct gives them better judgment of the quantity than we can have when we mix it for them.

Another great mistake made in feeding is the lack of green feed. When I remove a flock of brooder chicks to a grassy spot in early spring where the sun shines warmly and the wind does not blow, the first thing they do is to pick off all the tender shoots of grass and sprouting seed they can find. This shows their need of such feed. We cannot all have lettuce and young onions for our midwinter chickens, but we can have all the cabbage, turnips, potatoes or apples chopped fine that they can eat. I like to mix some of this with their soft feed, as it saves time that way.

One may use the prepared grits and oyster shell, the concentrated feed, blood meal, beef scraps, etc., if they choose, but I think the greater profits are derived from using the feeds the average poultryman has no trouble in supplying from his own farm. In this article I have given nothing, but may be so supplied, and in my work I use no others and cannot see but that I have as good success in feeding as others with the prepared food stuffs.

LINE BREEDING.

The Proper Methods to Pursue in this Very Important Part of Chicken Raising

There are two ways of breeding live stock of any kind: The scientific—the way that demands methods—and the pioneer's way—without method or any system whatever. The former is the scholastic way; the latter the illiterate one.

In 1865 there was not more than a score of breeders in this country who were cultivating poultry by the inbreeding system, and these few were laughed at, considered extremely foolish, denounced as "poultry quacks" and their work a system of humbuggery and inimicable to their infantile industry, but breeding to a line of sires is regarded now as the only true way of conserving the type peculiarities of a breed and all foremost culturists of fowls are recognizing its absolute importance to the welfare, the advancement of the industry. I have lived to see breeders by the hundreds, as it were, come over to the ranks of inbreeders who had always opposed inbreeding. Many of them had the manliness to acknowledge they were formerly in error in the matter, but having come into a better understanding of it gladly announce their affiliation with the line-breeders. But the method: what is the best way to propagate fowls by the line?

The methods presented by all inbreeders are very much the same in all salient features, varying only in the lesser ones.

I have my own way; some of it original, some borrowed. It is simple, but proves very satisfactory when followed to conclusions.

Select a male that has these proprieties strongly expressed: Constitutional, vigor of undoubted quality; type form native to the breed, expression and temperament, plumage best representing the variety of the breed in its highest state of perfection, productiveness as seen in its sires and dams for generations back when at all ascertainable. Indeed, this is an important consideration in the founding of a line for practicality must enter into this business or it cannot flourish. The very first thing to look for is the one first named. Constitution defensive qualities against bird ailments and a power to transmit this likeness is importantly imperative. If you were compelled to hunt a year to find this quality to suit you, better to search that long and get the blood than go ahead without it.

quisition. Too many breeders carelessly ignore the peculiarities which differentiate and stamp one family of fowl from another and breed away from the original toward an individual ideal of their own.

The necessity of obtaining every good quality possible in this foundation blood cannot be urged too strongly nor too persistently. Begin with defects and defects will multiply in

WHITE HOLLAND TURKEY.

This is a fair representative of the quality of stock raised on the Allyn Poultry Farm, Delavan, Wis.

his descendants and the line will be unworthy from the beginning to the ending. A hundred dollar male is cheap, if he is pretty nearly right in every section. From 12 to 15 months old is the best age, as if he is much older the chances of breeding in to him the second or third time are lessened, if much younger he may not be as strong, and strength is the support of the line.

I select a female of just about the same age required of the male, and one that has not a particle of the blood involved in her consort. Why? Because I build two strains from the pair. For this reason I obtain a female that is not older than the male in order that she may breed into the second and third times as is done with the foundation sire. In this female I have a foundation dam. All the essentials required in the male must be originally expressed in this foundation dam, she is to mother a sire of her own.

Pay \$50 or more for her if necessary, if you see in her what you absolutely must secure, or abandon the whole business. I prefer she shall be of a different type from the male or when I have established two lines I shall be able to infuse different type blood from one line to the other; besides some fanciers prefer the low, blocky somewhat Cochins type to the other one of a more sprightly and longer sectioned fowl, no matter what the breed or variety. This is not saying the one is better than the other but this much is essential: the type as expressed in the origin of the fowl to be line-bred should be sought out and cultivated in order for the perpetuity of breed peculiarities.

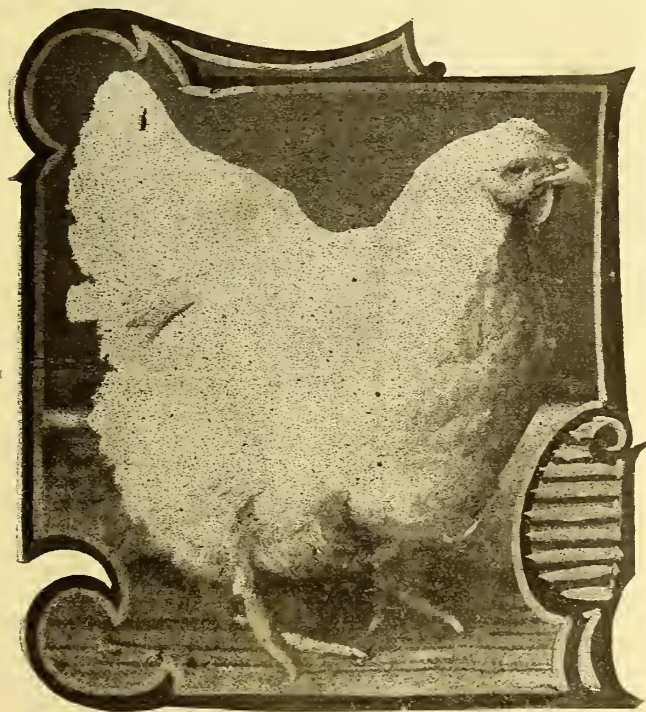

We now have a pair as worthy as one can secure, and as early as consistent with season and climate proceed to get out the chicks. If too early in a vigorous climate, the young will not do as well as they would later on, say March or April. In the southern states or on the Pacific coast they may be brought out in January, February. I name my male "Ulysses," the female "Penelope."

FIRST YEAR.

The first year one half-bloods of Ulysses' line and half of Penelope's. The cockerels, however, partake more of the latter and the pullets of the former, both in form and color, allowing each parent to be equally prepotent. Here the breeder begins his pedigree record. To be reliable in the approaching years, it must be exactly true. The young must be marked and the mark registered while the young are but chicks, and the marks looked to often to see that they are not outgrown or otherwise obliterated.

SECOND YEAR.

Reserve one of the best pairs of chicks for emergency. Mate sire to the best pullet of the lot, and one that bears marks of

WHITE WYANDOTTE FEMALE.

The kind of White Wyandottes bred by J. C. Fishel & Son, Hope, Ind.

I want to emphasize this. Better to not attempt breeding at all than to use weak impotent stuff.

Next in point of value is type expression. You want fixed form ultimately and that form must be in accord with the re-

having been well stamped by him. Don't use more than one pullet for line purpose, and she the best in most particulars—expression, vigor, form, color and laying qualities. This pullet should be at least twelve months old.

Mate a cockerel that most resembles dam and one that has constitutional property, form, color, expression, and as many other essentials witnessed in dam, to her, when he is at least 11 months of age, and not sooner.

From the breeding back to sire we obtain blood that is three fourths his; from the reunion of dam with her son, blood three fourths hers.

You have also mated the half and half cockerel and pullet, which were the result of first union, and they have given you chicks in no way changed in blood cells, but they have carried the blood along ready to use in case of loss of the original pair or one thereof.

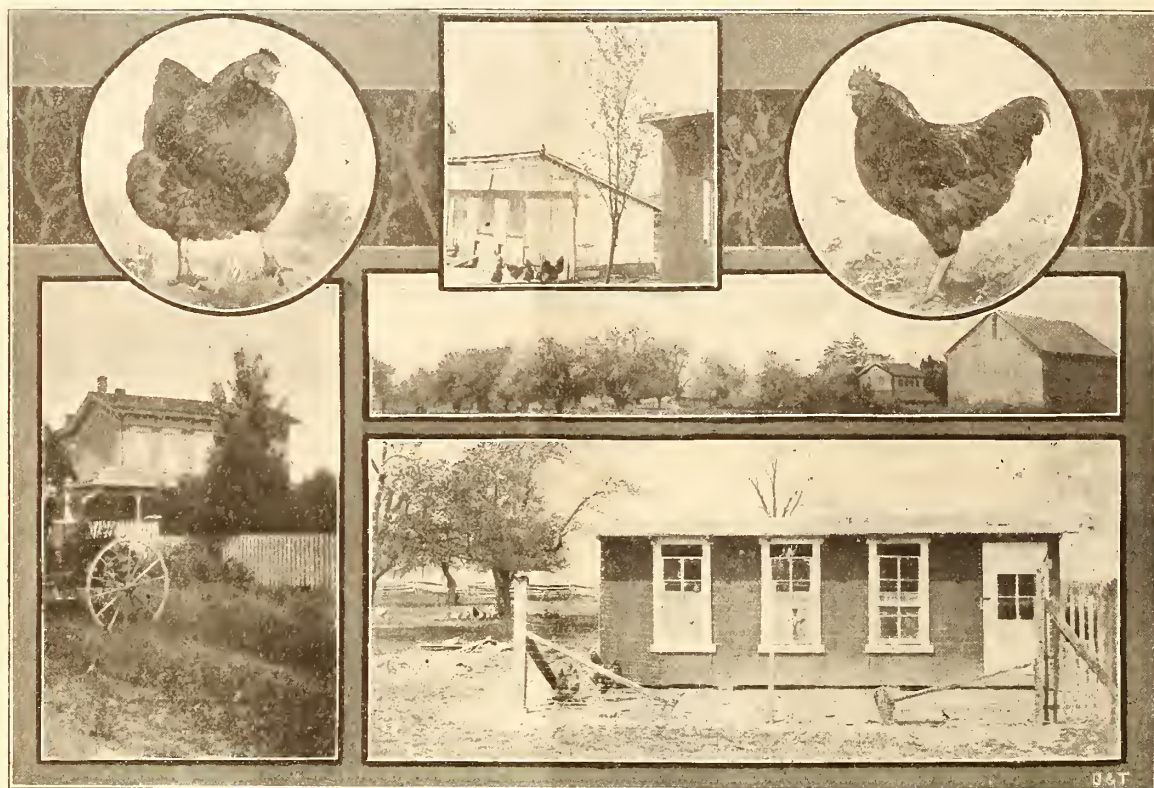

THIRD YEAR.

Your first pair are getting on in years, but are not old by any means and you again take the best three-fourths blood pullet and sex her with her grand-sire, the resulting progeny being now $\frac{7}{8}$ of the Ulysses' line; and place the best cockerel that is $\frac{3}{4}$ the blood of Penelope to her, his grandmother, producing progeny $\frac{7}{8}$ the Penelope line. And for the second time

away from home to do so. Is not this better than trusting to a "guess-so" purchase, and one that may ruin our established line?

Such breeding is systematically methodical. It is scientific. It is the only safe way to handle thoroughbred fowls. Once established these two lines will furnish the fancier and the thoroughbred breeder with all the material right at home for continuing them indefinitely. This is a value. He knows how these hens have been breeding and how they will continue to breed as long as he desires. Can this be said of the breeder who annually introduces new cock blood? Not at all. He never knows whether the infusion is going to better or make worse his stock. I have seen home stock absolutely ruined by purchasing what was purported to be royal stuff and which was paid for accordingly. The line breeder knows what he is striving for—what peculiarities he wishes to perpetuate; what characteristics he must contend with and mate against. His purchased cock may be the progeny of parents that were bred for characteristics foreign to the desires of the line breeder.

The soils of a farm may differ—some weak, some strong; the careful farmer knows where to strengthen and build up. Given strange soil, one must learn it. Given strange fowl

HOME OF BUFF ORPINGTONS.

Scenes on the farm of C. S. Byers, the Orpington specialist, Hazelrigg, Ind.

you mate brother and sister that are half bloods. This must be done always for reserve stock.

Is not this all simple enough? The little trouble it occasions should be considered a work of love—at least a pleasure and fascination. If the interbreeding is desired to be carried further, a half blood cockerel may be used with a $\frac{7}{8}$ pullet, and a cockerel, which would result in giving the breeder chicks 11-16ths of each line, because $\frac{7}{8}$ blood equals 14-16ths, and one-half blood, 8-16ths and one-half of 14-16ths plus one-half of one-half or one-half of 8-16ths, or 4-16ths, equals 11-16ths. This is good blood. I like it better than 15-16ths, which could be obtained by breeding back the fourth year.

But most breeders who follow line work prefer the $\frac{7}{8}$'s blood and claim it is far enough to go. This will depend much upon conditions, the breeder will readily call without mention here. Still, I have in my yards today a 15-16's Barred Rock hen that shows as much constitution and prolificacy as any of the ancestors preceding her. Indeed, she has much resemblance to a good Indian Game hen in form.

The foregoing simple work will give stock consisting of two lines and they can be drawn upon one to the other as long as the breeder wishes to cultivate fowls and without going

or fowls from a yard foreign to one's own and they have to be learned. The only way to breed fowls to perfection and to know all the time what one is doing and may expect of certain specified reunions is to breed from one's own line; or, as above, lines. Better two than one line.

Uniform flocks cannot be bred year after year in any other way than by a method similar to the foregoing, or truly like it.

I have followed line breeding for 16 of the 47 years I have cultivated thoroughbreds and am sorry I did not know the benefits of systematic work therein long before. I have taken more satisfaction and pleasure in cultivating our feathered friends in these years than in all the years previous, ten times told, and more money.

I am an advocate of single hen mating. We get greater uniformity thereby and can retain the progeny from the hen that breeds best and lays best, besides it is much easier to follow the line system.

By breeding two lines and having them as different as consistent with standard requisitions, the breeder can always have infusion that counts for constitution, prolificacy, remuneration.

Some foundation birds will not stand for good descendants beyond the seven-eighths blood; others will produce good stock beyond fifteen-sixteenths. This prepotency of the foundation blood must be considered so that interbreeding may not be carried too far.

Atavism shows itself strong in the second inbreeding, by which is meant tendency to revert to grand and great grand parentage, of course.

S. L. ROBERTS.

TRAP NESTS—PEDIGREE BREEDING.

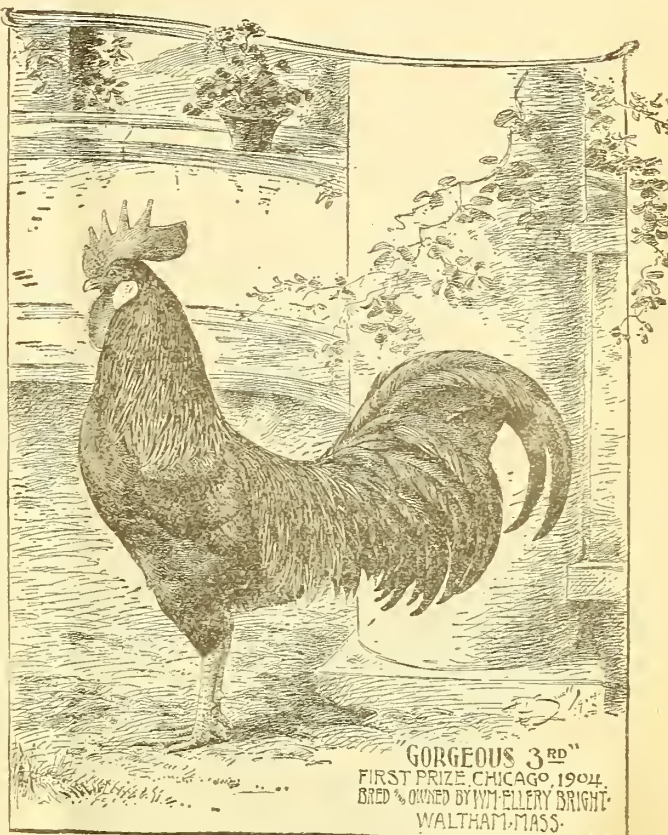

The fact that the trap nest has come to stay is apparent to all careful students of modern poultry culture. Whether it be in the production of superior quality for layers, for market or for exhibition an accurate pedigree of each specimen is required, and for this purpose the trap nest has become an actual necessity. True it is, that by mating in pairs one can accomplish this result, but few breeders are in a position to mate their birds that way, and practical poultry raisers would not go to the expense and bother of housing and caring for their breeders by that system.

The trap nest enables one to keep from eight to twelve or more hens with each male bird and yet keep as accurate a pedigree of each individual hen's chicks as though they were penned off in separate breeding pens and mated in pairs. Besides with the use of the trap nest one can mate a full pen of females to his best male instead of only a few at most, as in the other case.

Accurate trap nests turn the breeding pens into individual matings with the least possible inconvenience to the poultry keeper, whether he be breeding for the market or fancy. The false idea that the trap nest requires such a great amount of extra work as to be impractical for the great majority has been the means of preventing a great many from attempting pedigree breeding and record keeping, but, while this might

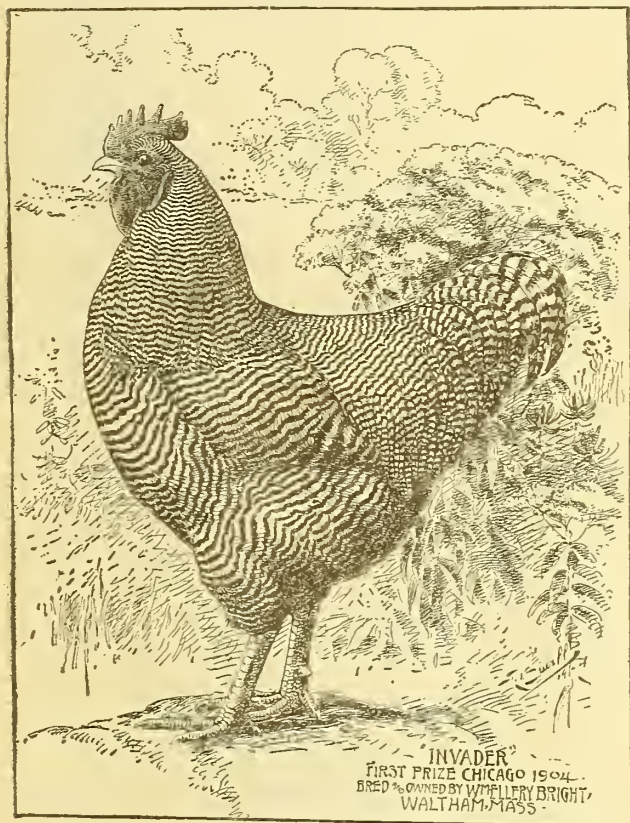

The only class of poultry keepers to whom the trap nest is of no value is the class composed of people who are contented to breed the same quality of stock year after year. To the true fancier and aggressive poultry breeder who is striving each year by careful selections and proper matings to have his flock each coming season excel anything he has been able to produce in the past, the accurate trap nest is of untold value.

I have devoted a number of years to careful study of pedi-

"Georgous 3rd," first prize Chicago cockerel, 1904; also first prize St. Louis cock, 1904, sold for over \$100. Grove Hill Poultry Yards, Waltham, Mass., has the sire and grandsire of "Georgous 3rd" and both of these males head two of their yards this season.

BARRED PLYMOUTH ROCK COCKEREL "INVADER."

"Invader" is first prize cockerel Chicago, 1904, and a full brother to first prize cockerel New York, 1905. Grove Hill Poultry Yards, Waltham, Mass., has the sire and dam of "Invader," and they are in the breeding yards for this season.

be true with some methods which have been used to a limited extent, it is not necessarily the case when a good trap nest of proper construction is used. In fact, the time required in keeping the pedigree of the eggs of a few breeding pens of fowls is not worth mentioning compared to the advantages accruing from the practice.

gree matings under different methods. When I first took up poultry breeding I was at that time unable to do much of anything else, and because of the pleasure I found in the care of the fowls I was with them the greater part of the time. In the spring of the year, when saving eggs for hatching, I became interested in watching the differences in the different hens' eggs, and, like many others, began keeping records of the individual hens by learning as best I could the individuality of each hen's eggs. Having only from four to six females in a pen that year I soon had records started for every hen I had. I spent so much of my time with them that I gathered a goodly portion of the eggs just as they were laid and marked them with the hen's leg band numbers, so I could set them separately and keep pedigrees of the chickens, and so find out which hens gave me the best stock. Well, I found out several things before I had studied those hens and their eggs very long. One of the first things I learned was that most of those hens didn't lay an egg uniform enough in size, shape and color for me to be sure which of the hens laid a certain egg without seeing her lay it, and I could readily see then how a little knowledge of a flock might give one a very different impression than a thorough knowledge would. When I started my records I went on the supposition that I could tell the hens' eggs apart and that I could depend on them laying in the same certain nests pretty regular, but I did not care for them that way long before I was fully convinced that the only accurate way of keeping a pedigree of each bird was to gather the eggs just as laid or have some scheme for keeping the hen separated from the flock while she was laying each time. My knowledge thus gained by almost constant watching from 10 o'clock in the morning until 2 o'clock in the afternoon compelled me to discard from one-third to one-half of all the eggs laid as being doubtful, but as I was doing the work more for my health at that time than for the compensation

I would gain from it in a financial way I did not care to raise a great many chickens. Afterwards, when I began to get interested in poultry breeding for a livelihood, I found this method of tracing the pedigree of my fowls altogether too exacting upon the time at my disposal, and the first trap nest plan I saw advertised to any extent was purchased and trap nests placed in the poultry houses. As time went on and I began to note an improvement in the uniformity of the quality of my strain, I found that many of the hens laid eggs which at times resembled each other so closely as to make it practically impossible to tell the difference except with the use of an accurate trap nest, and at times the color, size and conformation of certain hen's eggs would be so changed from the kind they would lay at other times as to be entirely unrecognizable as their individual product without the aid of the trap nest or accurate personal knowledge as to which hen laid them.

My experience in record keeping has given me pretty firm convictions as to the great value of pedigree breeding in the production of superior quality in thoroughbred fowls, whether it be for business or beauty, or both combined. The trap nest has taught me considerable about my flock which I should no doubt be ignorant of today had I been without it. It has

RHODE ISLAND RED PULLET.

Winner of second prize at World's Fair, St. Louis. Bred and owned by C. N. Hansen, Warsaw, Ky.

not only shown the hens which laid the best, but has shown the average good layers, the poor layers and the hens which did not lay at all. It has revealed the fact that some hens are hypocritical enough (if I may use the term in this sense) to go through the act of laying, visiting the nest regularly each day, without depositing an egg to their credit, although without the trap nest they would certainly be credited with laying regularly. The trap nest enables me to breed from not only my best laying hens, but from the choicest and most vigorous of my best laying hens' sons; it enables me to ascertain which hens produce for me the most uniform quality in their chicks as layers, as market fowls and as exhibition stock. In fact, the trap nest, together with carefully kept records, gives me a knowledge of the breeding value of each individual fowl, which enables me to so mate my breeding stock each year as to be sure of real improvement in the quality of each succeeding generation of their progeny.

The nest I am at present using is "The Ideal Trap Nest," and I like it the best of any I have tried because of its simplicity, accuracy and convenience in handling. It takes up no more room than an ordinary nest, and when not used for a trap nest makes an ideal open nest and the best I have ever known anything about for preventing egg eating. I consider it worth all it costs just for an open nest, even though it was not wanted for pedigree breeding or record keeping. It is in reality a closed nest whether used as a trap or an open nest, and therein lies much of its value. The hen while laying is in the sought for seclusion from the flock and after leaving

the nest the egg remains in that seclusion, thus avoiding the liability of the flock contracting the deplorable habit of eating their own eggs. Another point of peculiar value is that it can be changed from an open nest to a trap nest or vice versa almost as quick as to reset it, the way I use it. I have been so well pleased with it that I have no inclination to look further for my ideal in a trap nest; for that reason I mention the matter in this connection for the benefit of those who have been disappointed, if not disgusted, with the trap nests they have become familiar with. Some of my experiences with trap nests before I bought the plan of the "Ideal" were anything but encouraging to one who had his heart set on accurate pedigree breeding. One nest in particular required from two to three times the time and attention that the "Ideal" does to give me accurate records of each hen's eggs.

While I appreciate a choice fowl as much as any one, I place a much higher value on a choice specimen when I have an accurate knowledge of its pedigree for several generations back, and this extra value is real and actual worth to me, as my experience in pedigree breeding has taught me time and time again. No fowl can be mated to best advantage without an accurate knowledge of the quality of the ancestry from which it has descended.

The production of the best in pure bred poultry lies close along the line of the best modern trap nests and accurate pedigree breeding. The tendency of the times is towards more scientific methods in poultry culture, which in plain English means a more accurate knowledge of the causes and forces which make for the production of the highest standards to be obtained in pure bred fowls.

Taylor's Falls, Minn.

PREVENTION OF GAPES IN YOUNG CHICKS.

The old saying that "an ounce of prevention is worth a pound of cure" is certainly true in this disease of young chickens. As I have had the chicken fever for over a quarter of a century my experience might be of some value to a beginner. When I first tried my hand at raising chickens I would always loose quite a number with the gapes. As a person can profit by experience (which by the way is a high-priced teacher) and by reading the experience of others I found myself no exception to the rule.

When the gapes would put in an appearance I was always ready to try every new remedy I chanced to hear of. One of the first cures I remember of hearing was to take a handful of air slacked lime, putting the same into a tight box, give the box a shake, then insert the chick as quick as possible for a moment and remove. As I had a brood of White Face Black Spanish at the time affected with the dread disease I thought I would try it on one. I did so and succeeded in curing the gapes, but upon examination I found the chicken had lost the sight of one eye in the operation. Next I was told by blowing tobacco smoke down the windpipe that would kill the worm. I tried that treatment on a young game. The smoke killed the worm all right and the chick went the same route a moment later. Then I read that by not depositing the droppings where the young chicks could get to scratch in them it would have the desired effect of preventing the gapes. I tried that and found I was not troubled so bad as formerly. Next I was told that by feeding cornmeal it would cause the gapes. As we used to use it quite extensively I quit it and found we had better luck in not losing so many chicks. Then I was told if the mother hen was troubled with lice that would cause the chicks to have the gapes. I gave that matter some attention with satisfactory results. Then I heard that dampness was a breeder of gapes, so I gave that some consideration and received further benefits by keeping the chicks dry.

I don't think I have lost a dozen chicks from the gapes in the last five years, and by observing the following I am no longer troubled with the gapes:

First—Keep the hen house and fowls free from lice and the runs in a sanitary condition, having no manure heaps of chicken droppings for the chicks to scratch in.

Second—When you set the hen to give her a fresh nest with new straw in same.

Third—When the chicks hatch to put them and the hen in a nice dry place, where the hen can dust herself and the chicks will be kept dry in damp weather.

Fourth—By feeding chop feed for soft feed in place of cornmeal, and only to feed what they will eat up readily with a relish, as I think if feed is allowed to remain where the chicks run over it it not only becomes sour and not fit for them to eat, but they also will become tired of it quicker and on the whole will not eat as much.

I also think the greater variety of food you give them the

better they will do, and I think one of the best preventives against any disease is to keep the flock in a good, healthy, growing condition; also to remove the hen and chickens often to fresh ground is good, as the earth will become foul where they are kept if not kept cleaned out and fresh earth replaced. By following the above rules I didn't have a case of gapes last year in a flock of about 70 which I raised.

Mt. Vernon, Ohio.

BROODER CHICKS.

This subject seems never exhausted, but we have been so successful with raising brooder chicks we feel almost like we were the real "know it all," and still we might yet learn volumes. We found by expensive experience that a good brooder was an absolute necessity, so that is what we have now. It is an outdoor brooder, but for our February and March hatches we use it in a nice warm building with good tight floor. We have the brooder thoroughly cleaned and warmed; temperature at 90 degrees; floor thickly covered with chaff. When chicks are about 48 hours old they are put in here, about 75 to a 200-chick brooder. Here we leave them to rest and become acquainted with their new home for about 10 or 12 hours. Then we put in drinking barrels filled with slightly warmed sweet milk, grit pans filled with fine pearl grit and feed pans with either dry corn chop, chopped wheat or steel cut oats. We feed them about four times a day until one week old, using the dry chopped grain with plenty of milk, water and grit. Then we begin to throw them a little fresh cut green bone (and let me say right here that if I have a hobby in the chicken business it is fresh cut green bone). When they are three or four weeks old they have all they will eat once a day with the different chopped grains, with whole wheat and Kaffir corn as a grain diet.

We chop potatoes, cabbage or any convenient vegetable for green food, but we never feed sloppy foods or mashies to young chicks, but do emphasize the use of plenty of sweet milk and fresh cut green bone along with plenty of clean water. Keep constantly before them plenty of grit and charcoal, and as far as feeding is concerned your chicks are going to grow to be healthy and happy, if you keep everything connected with brooder and breeding perfectly clean. Reduce temperature in brooder to 75 after first week and about 60 fourth week. After first week we open the brooder door and allow chicks the run of the rooms and to go back into brooder at will. When six weeks old they roost in a box in the run without artificial heat. If weather is at all pleasant they are put out in colony houses on the grass, for they are by this time pretty well covered with feathers, and at nine weeks old we have had them weigh one and one-half pounds, well feathered and ready for a slow western market.

MRS. D. M. JOHN.

Joplin, Mo.

THE REARING OF CHICKS.

Clean quarters, shade, pure fresh water and judicious feeding are the chief essentials of chick raising. Of course, by this time, the chicks are in most cases all hatched and past the critical period, or first two weeks of their lives. The question now arises, what must be done with them in order to produce hardy and well-matured breeders for next season's pens.

In the first place see that they have clean and airy quarters. There are a great many different styles of brood-coops now in use that are proving satisfactory, but the object should be to have them so constructed as to be always dry, well ventilated and of ample size for the number of chicks housed in them. By whitewashing the interior of these coops and cleaning them every other day or so the house problem is solved in the easiest manner, for one seldom, if ever, sees lice or vermin where strict cleanliness prevails.

The subject of shade is an important one and must not be overlooked. On the largest poultry farms shade is obtained by planting fruit trees in the yards and runs. This is, perhaps, the best method, but where it is not practicable mammoth sunflowers planted in the same way as corn will answer the purpose as well, if not better. The ripe seed also will be of great benefit to the poultry.

Cool, clean water is undoubtedly more essential to our growing stock than even feed. Still this is a matter often attended to with the utmost carelessness. The water fountains are allowed to get rusty and slimy, and the water allowed to remain in the hot sun, unchanged for days at a time. Where such conditions exist it is no wonder that we

so often hear complaints of the chicks not doing well. Ample sized earthen or stoneware fountains are about the best for general use, as they are easily kept clean and they seem to keep the water cooler than tin fountains. By setting them in a shaded place and refilling twice a day during the hot months no difficulty will be found in having the water supply pure and fresh.

Feed for the chicks during their growing period should consist largely of solid grains, such as cracked or whole wheat, barley, oats and cracked corn. Care must be taken not to overfeed and at the same time not to starve them. It will readily be found that chicks prefer a variety in their feed. Animal meal or cut bone may be fed occasionally, especially where bugs and insects are scarce. Green food has come to be recognized as an absolute necessity. An abundant supply may be had by sowing clover early in the season or later by sowing lettuce or rye. If the chicks

PRINCE GOLD DUST I.

Buff Plymouth Rock male that heads pen No. 22 in the yards of H. P. Rankin, Hartington, Neb.

have free range and ready access to good sharp gravel no other grit will be needed. Otherwise, however, it will be necessary to provide some of the prepared grit sold on the market.

The foregoing suggestions are of equal importance for all maturing stock, whether intended for the breeding pen, show room or market. If success is what we are after it will be found necessary to continually study the conditions and needs of our flock and to give them the best care possible.

W. H. VOELKER.

Winona, Minn.

H. W. Collingwood says a bushel of wheat, costing 90 cents, will feed a hen for 300 days. If she lays 100 eggs, worth two cents each, she will increase the value of the wheat to \$2, which is enough to haul one ton of freight 250 miles, or to haul one passenger 80 miles. After she has done all this she will return 25 cents' worth of the fertilizing value of the wheat to the soil for another crop.

Feeding cooked or steamed clover hay prevents soft-shelled eggs.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

The American Poultry Association Extra Meeting.

At the twenty-ninth annual meeting of the American Poultry Association at Minneapolis, Minn., the breed of fowls heretofore known as Rose Comb Rhode Island Reds was admitted to the Standard of Perfection under the name of American Reds. The description adopted differed in many respects from that of the Single Comb Rhode Island Reds. The committee on publication was instructed to give the newly admitted variety a place in the new standard now being printed. This action at Minneapolis met with much opposition from many of the breeders of Rhode Island Reds, who were not present at the regular meeting. After much discussion through correspondence and in the poultry press, it crystalized into a call, signed by more than five members

of the executive committee, for an extra meeting to reconsider the matter.

The extra meeting was held at Pittsburgh, Pa., April 4th. President D. Lincoln Orr presided. He opened the meeting by reading the call and stating that "the chair decided the meeting illegal." An appeal from the decision was promptly taken, and by an overwhelming vote the chair was not sustained. It is not necessary to follow in detail the motions, points of order, withdrawals and appeals. Suffice it to say the association voted to reconsider the motion passed at Minneapolis to admit the Rose Comb Rhode Island Reds under the name of American Reds, and then postponed farther consideration of the subject until the next regular meeting.

American Poultry Association's Meetings.

We are firmly convinced that one meeting of the members is enough. We may go farther and say in all sincerity we believe that as a general rule more than one is harmful. This is a large country. A meeting in any section entails a considerable expense upon a member coming from another section. It cannot be much of an exaggeration to say that the average cost to the individual member of each attendance is between \$100 and \$200. The meetings have been held for the last few years in the following order and places: Boston, Mass.; Toronto, Canada; Cedar Rapids, Ia.; Chicago, Ill.; Buffalo, N. Y.; Charlestown, S. C.; Hagerstown, Md.; Cleveland, New York; Indianapolis, Ind.; Rochester, N. Y.; St. Louis, Mo.; Minneapolis, Minn., and Pittsburgh, Pa. It is doubtful if one out of the thousands interested have attended all these meetings. It is sure that but one or two have attended a majority of them. We must expect then that the things done at one by honest, conscientious effort will be changed or torn down at the next; and this by as equally conscientious and honest friends. And this, too, at regular annual meetings.

What shall we say then of extra meetings, made constitutionally possible by the call of only five out of seventy-five members of the executive committee? We do not wish to intimate there was not a necessity for the extra meeting lately held at Pittsburgh. How much better, however, would it have been if the Rose Comb Rhode Island Red Club had made an arrangement to have had their views and desires presented at the regular Minneapolis meeting? Of all those interested but one appeared. The meeting could not but believe that one fairly voiced the sentiments of all. If the matter had been properly understood there would have been no extra meeting at a cost of thousands of dollars to the association and its members.

Delay in The Standard.

We wish to again explain the situation in regard to the new Standard. We have received many orders from our subscribers for copies of this book. Basing our knowledge upon past experience in the issuing of Standards, we inserted in all the advertising that we have done, that all orders for them were accepted for future delivery when the Standard was finished, assuming for ourselves no responsibility

for the delay. Going back over a period of many years, we find that the same conditions have existed with all new issues of the Standards and that poultry journals have been called upon to apologize for the American Poultry Association for this delay, so it is nothing new for the AMERICAN POULTRY JOURNAL to ask the indulgence of its readers who have ordered the new Standard, to wait with patience until it is issued.

In the case of the anticipated new Standard, there seems to be a greater excuse for delay than in any previous edition. The book is larger, will be illustrated; and added delay has been caused by a controversy in regard to the admission or non-admission of a new variety. It will, undoubtedly, be several months before the American Poultry Association will have completed the book. In the meantime, purchasers who have sent in their orders can confidently be assured that when it is issued, it will be of such value that the delay will be amply made up in the value of the book.

Understand, we had what we believed good reasons to anticipate that the book would have been published and ready for distribution sometime ago, or we would not have solicited orders for same so long in advance.

Again we say, the best that can now be done is to wait with patience, and we believe that every buyer will be greatly pleased and fully satisfied when the book is eventually ready for distribution.

Things are shaping themselves well for the poultry show in connection with the Lewis and Clark Exposition at Portland. Mr. Elmer Dixon has been appointed poultry superintendent and competent critics who well know this man say he will bring together the greatest display of fowls ever seen on the Pacific Coast. Mr. Dixon has been connected with the Oregon State Poultry Association for many years and brings to his office a wide experience. Mr. Harry Collier has been appointed state superintendent of poultry for Washington, and he will doubtless employ his great poultry experience in getting out a grand display from his own state. The Middle West states are planning to show in hot numbers at Portland and most of the states have already decided to allow goodly appropriations to defray the expense of upholding their chicken industry.

* * *

All poultrymen are not politicians, but some politicians are fanciers. Mr. Geo. S. Barnes, editor and publisher of *Michigan Fancier and Game Fanciers' Journal*, has recently been elected mayor of Battle Creek, the famous health city. If George is good for the office and makes it as clean as his efforts in the fancy, citizens of Battle Creek will probably reelect him to their highest office. Joseph Hilldorfer, of Pennsylvania, the Black Minorca fancier, has long been a councilman of the Pittsburgh city council. We could cite many other instances, but these suffice to show that fanciers can be successful in other walks of life.

* * *

We are again approaching the warm days of the season, but let us be thankful—thankful that it is not as warm here as in other quarters of the globe. We read with sorrow the account of warm weather in New South Wales, Australia. December 31 the temperature rose to 120 at 11 o'clock a. m., and on the prairies

fires broke out over many miles of what the Australians call bush. Thousands of homes and millions' worth of stock and crops were burned. Dozens of poultrymen and fanciers were reported to have lost their homes and all else in the great fires. When we are sorely perplexed we can change our thoughts considerably by calling to mind the blessings about us.

Dr. Phelps has more than done his share in putting the Favorelles where they now are—but the fowls that make him proud to talk of them are his little Dutch everlasting layers, the Lakenfelders. The Doctor has petted and coaxed them into the front rank of all new breeds. They are a worthy breed and will rank among the best layers of the many small breeds. Lakenfelders possess a good qualification in their ability to turn feed into eggs and if more of the new breeds had as capable distinctions they too might rank higher.

Who has said that the average life of a poultry association is two years? If it is so, why is it true? It seems that the social side of the small as well as large associations is sadly neglected and those which have tried meetings and banquets have found them successful in the extreme. "Chicken" is not all there is to an association! The discussion of the various phases of the fancy are necessary to poultry education and improvement in breeding, but a social side will keep the organization well together and make its work more efficient.

The Gillies Publishing Company, of Topeka, Kan., have sold their publication, the *Poultry Gazette*, to McClaskey-Jessup Pub. Co., Clay Center, Neb., who will continue its uninterrupted publication. Geo. H. Gillies, the former president and editor, began the publication of this paper seven years ago and has placed it in a fine position in the poultry publishers' field. The new publishers have our best wishes.

Our friend Drevensdt takes Mr. T. E. Orr to task for the statement he made in an article recently about all good breeders not being good judges. Further along in said article he says that many of the best all round judges were not successful breeders of any one variety. Brother Orr had none of the good judges

and breeders in mind when he wrote the article, no doubt. There are many names that come to us of good breeders of poultry and all are capable judges of the quality of birds placed before them.

There has been much said and written of the gospel trains for dairy, corn and alfalfa and potato culture, but why not talk about good poultry? Is a poultry gospel train premature? There is room for great improvement in the line of poultry culture on farms throughout the West and the work of helping cannot begin too soon.

Mr. Geo. M. Downs has been editor of the *Southern Fancier* for a good term of years, but lately his duties have become so manifold that the publishers have given him an assistant. Mr. H. F. Riels brings to the paper the ability to brighten up its columns and already we see a change in the *Southern Fancier's* appearance.

Now that the goose hangs high in the A. P. A. tree again, the breeders of Rhode Island Whites, Silver Penciled Plymouth Rocks, Partridge Plymouth Rocks and Sicilian Buttercups will know how to go ahead with getting their favorites into the Standard.

Five pens of Indian Runner ducks stand at the head of the Australian duck laying competition, with nearly 825 eggs per pen of six ducks. Orpington ducks come next.

When you do any whitewashing use the old fashioned brush. It does the work more effectively and in a much neater way than that done by a force pump. The latter is all right if you prefer tattoo work.

The number of pounds of food elements we buy in a ton of bran are 223.4 muscle makers; 1,085 fat formers; 70.0 pure fat.

The Orpingtons, especially the Buff variety, is obtaining considerable foothold in this country among the utility men.

James R. Covert, government expert, says it is assumed that the nutritive ratio for the laying hen and the milch cow should be approximately the same.

America's Big Four

Or Rankin's Royal Rocks and White Wyandottes

Send today for my new illustrated catalogue. It will be worth dollars to you, but I will mail you one for the asking. It is beautifully illustrated and gives mating list for 1905.

Death to Lice

When an article like Lambert's Death to Lice Powder can meet the demands and successfully withstand the tests of over twenty-one years' use, under any and all conditions, and at the same time grow more popular with the buying public year after year, it is mighty good evidence that it possesses that subtle quality, that winning element which makes either men or material stand just enough higher above the rest to be considered the

STANDARD OF ALL.

Lambert's

Death to Lice

would not be the standard remedy it is if it did not do the work better, quicker, safer and surer than anything else. It has earned its reputation for ridding hens, horses, hogs, sheep, cattle, dogs, henneries, etc., from the ravages of body lice by quick, thorough, effective work. Its user has the assurance of success—there's no chance for risk. Why waste time and money on cheap, ineffective, unknown powders?

Why allow your sitting hens to be ruffled, feverish and discontented when "Death to Lice" will keep them cool, quiet and satisfied? The best is always the cheapest—that's Lambert's. A sample 10 cent box will tell. 100 oz. by express \$1.00. It has proved the turning point to profit for hundreds of poultry raisers. Why not for you? Lambert's Death to Lice Ointment for head lice on small chickens is equally effective. Sample 10c post paid.

CARE OF THE YOUNGSTERS.

At this season of the year the breeder who would raise and develop a fine flock of poultry is necessarily very busy. This is one of the vital times in the year's work.

How are your breeders? So often we find them not properly mated and their quarters not at all suited to them. Nearly every one who raises poultry nowadays can give them comfortable and ample quarters if they will. I don't intend to say that it is necessary to have large, elegant houses and yards and "unlimited range." All this is not necessary. A city lot can be made into a comfortable and profitable place to raise chicks and develop them into top-notch show birds. The gymnasium develops our boys into sturdy athletes as perfectly as following the plow or splitting rails. So with the feathery brood. We have all the productions of the "poultry supply" man with his beef scraps, broilers' teeth, alfalfa meal and a hundred other valuable mixtures. All good and which supply all the variety of food that any prize-winner could ask for. These articles are on the market at reasonable rates and can be relied upon. All you have to do is to supply amusement and employment for the youngsters with clean quarters, with sunlight and shade, with good comfortable quarters at night, and don't crowd. Keep them busy scratching for their feed and always have fresh water for them, and you will be rewarded on a city lot as well as on ten acres.

I believe it is a hard matter to overfeed a growing chick if he has plenty of exercise. Don't get the idea that your chicks are overfed. Nine chicks fail to wear the ribbons from not enough feed to one who fails from overfeeding. From the time the chick is dry until he is a matured bird he should be fed as generously as you would feed other stock if you are going to make an exhibition specimen. A great many wonder why their

birds get out of condition so often, but when you ask about the grit, they will say, "Yes, I feed grit once a week." The fact is, the chicks get a small amount of grit once a week and everyone eats greedily of it and fills his crop so full that the excess does him harm. Keep grit or fine river gravel before your birds constantly. It is the best tonic you can give them. They need it just as much as an engine needs oil. I have a liberal supply of coarse river sand or fine gravel constantly at hand and my stock is never without it. It costs a dollar for a wagon load and is easier than crystal grit on your expense account.

Look well to your breeding pens. An attentive male may not get feed enough to keep up his strength and the eggs suffer in consequence. If you find such to be the case, feed him separately. Old hens are always gluttons and may be getting too fat. Better mate them by themselves with a good vigorous cockerel. Cut their feed down and feed the cockerel separately, and you will be pleased with the result.

The care of the setter is no small item when considering the year's success. Handle them gently and they will behave much better. Dust them well when you set them and about half way through and again before they hatch. I always use a little of Lambert's Head Lice Ointment on the little fellows' heads when they are taken off and whenever the head lice show themselves afterward. These lice kill more chickens and account for more stunted birds than any other cause and should be thoroughly looked after.

I want to tell you of a brood coop that I find of greatest service. Take a piano box and remove the top and bottom carefully. Lay the box on the back and put in a partition and nail lath slats over the opening made by removing the top. I then hinge the top previously taken off to the slanting front so that when it is raised up it makes a shade and protection from rain. I then saw

the bottom previously taken off into three equal parts and then nail the center one-third to the box in its original place and make two doors of the other two-thirds and hang them with hinges. Then the box is covered with ruberoid, which keeps it dry. This makes two very cozy brood coops and when the chicks are large enough for the hen to be taken away, there is a nice colony house for them. I have used these for several years and like them better than any other form of colony house. Ventilation can be arranged to suit your ideas. Never shut your chicks up so tightly as to exclude the fresh air, for the growing chicks must have a generous supply in their sleeping apartments. Have a good supply of fresh air, but avoid direct draughts. One of those piano box colony houses will shelter fifteen to twenty chicks, but don't crowd any more in.

DR. N. E. MIGHELL.

Oak Bluff. Marshalltown, Ia.

C. N. Hansen, of Warsaw, Ky., Rhode Island Red breeder, writes a letter to the AMERICAN in which he arranges poultry into three different classes—that raised for Fancy Points, for Eggs, and for Broilers. He states that the popular instruction given to breeders is to make a specialty and raise but one variety, and asks if there is a variety that can be a success under these three headings. He answers his question by saying that he knows of one variety that is suitable for all three purposes; a variety that is coming to the front like weeds; a variety that they used to call Barn Mongrels; a variety from which the name has been attempted to be taken. Yet with obstacles opposing it, it has come to stay and surely possesses these three different qualifications, and is sure that his statement will be borne out by Rhode Island Red breeders, for they surely know the good things that the Reds possess. He says that as layers they produce more eggs, especially during the cold weather, than any other variety, as they have heavy feathering that keeps them warm, and they are very active and do not sit around and freeze. They lay a larger brown egg than any other brown egg variety, and mature very quickly. One of his customers writes that they outgrow the big Black Langshans for the first five or six months, and it is at that age or even before that broilers are sold to the market; and that the R. I. Reds have that long body with plenty of meat and fine yellow skin, and they dress as fine or even finer than most any variety with which he is acquainted. On the Boston market they bring more than the market price for dressed poultry. He concludes by saying that they appeal to the fanciers, as they are very attractive in shape and color with their velvet red plumage, yellow legs and fine carriage and style.

Mrs. J. H. Orebaugh, Batavia, Ohio, made a grand winning at Cincinnati's great show. Her W. Plymouth Rocks are one of the very best strains in the land, as their record at the largest shows has proved. Mrs. Orebaugh's White P. Rocks won the most coveted prize of the whole show, winning the Proctor & Gamble silver cup for the highest scoring bird in the show. Those wanting W. P. Rocks should order eggs of her, for you will get the best.

"It Hatches Great"

HATCHING EGGS BY THE OLD METHOD.

"You old fool, I'll break your neck for you if you don't stay on your nest." These were the words I heard from the mouth of an enraged man who had a "stubborn" hen on some costly eggs and she was playing "hob" with them. That was a long time ago but these words were not without their meaning and it put me to thinking which has done me no little good.

Now not every beginner has the privilege of owning an incubator and because of this he sort of dreads entering another season with the old hen. Rotten eggs are not the result of nature's laws but of man's ignorance as is being proven every day.

It is not my intention to tell you how to get fertile eggs. I'll simply go on the supposition that those are the kind you are about to put under a hen and that by going by these few simple rules she will bring off a good hatch.

With every incubator sent out from the house there is sent with it full directions as to how to operate that machine. Do breeders who send out hens for breeding send with them such specific directions how to have them bring out successful hatches? I truly believe it takes as many brains to hatch eggs with a hen as it does with an incubator.

Let us keep in mind that every hen has:

1st. Some ideas of COMFORT. These ideas may be very crude but they are ideas and unless you conform to them she will disappoint you.

Did you ever try to sit still patiently, very patiently when you were courting an unruly tooth? What pleasure have you

derived from sleeping with a hundred mosquitoes singing their love ditties in your ears? Well, what tooth-ache and mosquitoes are to you LICE are to the setting hen! With lice there can be no real comfort either to man or a hen. Do you take the hint?

2nd. Your hen will have some idea of PRIDE. Three days, yes three hours would be long enough for me in a place like those I have seen given for the hen to spend three weeks in. A hen is not a night owl that she must have a dungeon in which to spend her precious weeks. Neither does she delight to feast her eyes upon cobwebs three score and ten years old. And from what I have observed she really despises to rest upon litter that was used by her ancestors for the same purpose. Give her clean nest-material and then go a step further and put a coat of whitewash on her box and she will feel more like sticking to her place and the mites will feel more like letting her alone!

3rd. Every hen has a sense of comfort about her. Even a hen knows a man when she sees him! I was in a certain barn one day and stumbled on to a box and unthinkingly gave it a kick, saying: "What's in this thing?" And back came the hurried reply from my companion: "O don't, I've an old hen in there on some high priced eggs." The last place on earth I would have looked for high priced eggs, let alone a patient old hen. And yet the fellows who thus treat their setting hens are the first ones to cry out "break her neck" when she don't come off with a chick for every egg put under her!

Then don't forget that a hen like yourself has an appetite that must be satisfied no matter what the cost. Many peo-

ple do not feed a setting hen but leave her to hunt her living and when she does so she often has a hard time to find something to eat and remains off the nest too long and then she gets another cursing.

Keep near her pure water, pure wholesome food, and material for a good bath and everything else being equal she will do good by you.

I have an incubator which does very good work, but I also have good success hatching chicks with a hen and this is how I do it.

Try and see whether I am right or wrong.

WM. HARRIS GUYER.
Barkeyville, Pa.

PRIZE WINNERS.

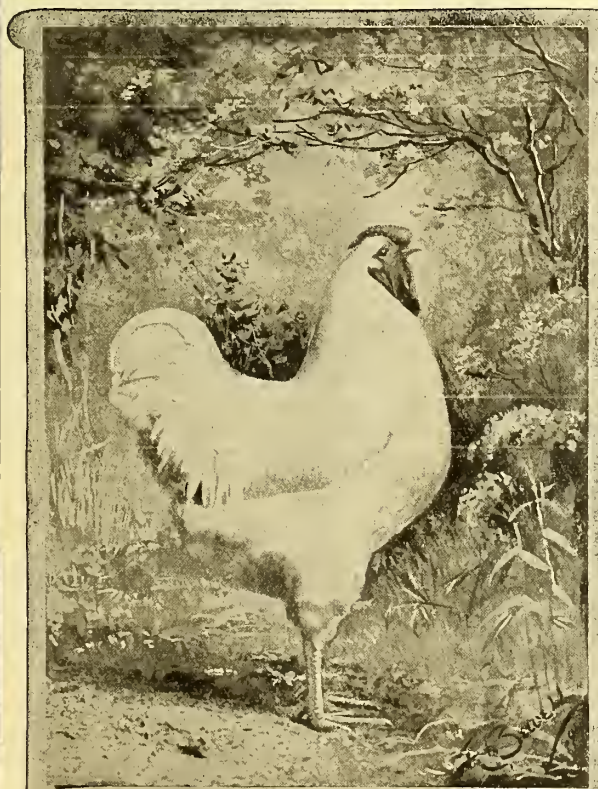

Now is the time we are raising our prize winners for the fall and winter shows. First get eggs from good, healthy stock, properly mated to produce prize winners. Second, keep the chicks growing by giving them clean dry quarters and proper feed, care and exercise from the time they leave the shell until they enter the show room.

J. A. BARNUM.
Coldwater, Mich.

BUFF LEGHORNS.

Why is it that we hear and see so little of these beauties? My buffs have been laying since Nov. 1, 1904, and there seems to be no end to the laying. Have been trying the dry feed ration—wheat, oats, corn and buckwheat—with green bone twice a week and think my birds are healthier and lay better than when fed on mash. I wish more Buff Leghorn breeders would do justice to this breed.

Big Money in Spring Chicks

IT'S a popular idea that chicks must be hatched in February or March to be profitable.

As a matter of fact, April, May and June chicks usually show **better returns**.

The percentage of fertile eggs is greater—weather conditions are more favorable and the result is stronger, brighter, healthier, quicker-growing chicks—and **more of them**.

June chicks are often ready for market as soon as those hatched in March.

They are hardier, more vigorous, and **grow like weeds**, rapidly catching up with the earlier hatch.

Figures—profit and loss—have made it plain to them where the money lies. The result is 16,000 Sure Hatch Incubators and Brooders sold since January 1st, 1905, to be used for later chicks.

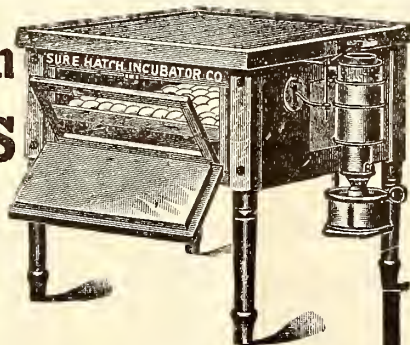

This is pretty good evidence of the **value of the Sure Hatch** too, isn't it?

There's a mighty good reason for 16,000 sales of the Sure Hatch in **four months**.

Why You Should Buy the Sure Hatch

Because the Sure Hatch is an honest machine clear thro' honest construction, honest materials, the embodiment of facts gained from years of experience in artificial hatching and the building of hatching and brooding machines. It has more valuable improvements than any machine on the market.

It is the kind you want and it's the kind we want you to have.

The Sure Hatch is **guaranteed for 5 years**, and sold on **60 days trial**. Not a single machine has come back because it failed to make good.

A Sure Hatch will insure you against disappointment, and prove a **money maker** every day it is used whether by itself or in competition with any other make of incubators or brooders.

The 1905 Sure Hatches are **new** machines, conceived, designed, built, patented, manufactured and sold only by the Sure Hatch Incubator Company. They have **exclusive features** that you can't get in any other incubator, for they're **patented**.

For the next **Special Prices** 90 days we have some **special** prices. Write for **free catalogue** and learn about our **liberal offers for the summer**. Shipments made on the **same day order is received**.

Address nearest office.

CRITICISM OF MR. GOULD'S POULTRY HOUSE.

In April number AMERICAN POULTRY JOURNAL I notice an article by a Mr. Gould, entitled, "A Cheap Poultry House," which it undoubtedly is beyond dispute, but when the gentleman goes further and says it is an economical house, and a warm house, the writer begs to differ. In the first place an economical house should be economical for the attendant as well as for its feathered occupants and it would seem to an observer that the person obliged to have the care of fowls in such a house would be in grave danger of getting his brains knocked out at most any time unless he were a dwarf or traveled on his hands and knees while within the enclosure. Cheapness is a very desirable feature in poultry buildings and a person should have as little money tied up in buildings as reasonably possible, but at the same time cheapness is not everything, when you sacrifice comfort and convenience for a few dollars expense I question if the saving is not on the wrong side. Also it would not seem that getting the hens up so near the roof, or as I should have said, getting the roof down so near the hens, would add greatly to the warmth of the house or healthfulness of the hens kept therein, neither would it be a tempting place for the attendant to work in, to renew litter when necessary,

BARRED P. ROCK.

Fourth cockerel at Richmond, Va., November, 1903. Owned by C. C. Randieman, Ramseur, N. C.

or to spray for lice, or to whitewash. In fact in such houses one is too often tempted to throw the food at them and depart, knowing very little more about the fowls than if a visit had not been made to the house at all.

The writer has found it a very desirable feature to have enough windows, and large enough, in the houses to give the sunlight a chance to enter the house in good shape and penetrate into the corners and kill the germs and sweeten the house up, and if one finds the house too warm it is the work of but a moment to open one or more windows and let in the good fresh air and has that advantage over the house with the cracks in one end left open for ventilation, inasmuch as in one case the ventilation can be regulated according to the weather and in the other case it cannot.

The writer would submit a description of a small house, built by himself, which after three years' use has been found very satisfactory. It is 8x16 on the ground and faces southeast, it is four feet posted and has two half sash win-

dows (6 light 9x13) in southeast side and one sash same size in southwest end. The sills are of 3x4 and the construction of the roof is of 12-foot boards cut in two and nailed up and down from the plate to the 2x3 stick which forms the ridge pole. The house has a cross sill 3x4x8 feet in the middle of the house, upon which rests two 2x3's, each fifteen inches from the center of the cross sill, these sticks support a 2x6x5½ foot stick which runs from the inside of the plate to the ridge pole on both sides, then two 1x3-inch furring strips nailed lengthwise of the roof on the inside, midway between the plate and the ridge pole strengthens and braces the whole thing. Such a roof can be built quicker and cheaper than to use rafters and there is no obstruction of the head room, no knobs on which to bang one's think tank as in the case with rafters; it makes a quite steep roof, being 7 feet at the peak and 4 at the eaves and can be covered with roof papers or shingles, although shingles will last a great many years on such a roof and are cheaper in the end. On this place we use such a house as above described for a breeding pen for twenty-five S. C. R. I. Red hens and two male birds, alternating the males, which gives each a day's rest between each day's service, and which tends to keep them in good weight and vigor, and is the best method known to the writer to insure fertile eggs early in the season. We also consider dry feeding an important factor in keeping fowls in good condition, and beside the saving of labor in not mixing mash, find the egg yield also more satisfactory than when soft food was fed.

ALVIN W. DUDLEY.
Kendal Green, Mass.

CLEAN BROODERS.

A very satisfactory method for keeping the brooder clean and wholesome is to fold a newspaper the proper dimensions and place evenly in bottom; replace every morning with clean paper; also each evening, if chicks are confined through the day. This removes every particle of droppings and bottom of brooder does not become fouled.

J. B. BENNETT.
Ringwood, Ill.

INCUBATOR CELLAR.

For an incubator room a cellar built apart from other buildings will give satisfaction if ventilated and lighted. Excavate about three feet of earth. Let this dirt be used to bank the other two or three feet above ground. The roof may be of tough sod and laid on rough boards.

B. S. BECKINGTON.
Garden Prairie, Ill.

FEEDING.

My pullets are laying better than usual this spring and much better than my neighbors'. I think it due, in part, to the way I fed them while growing, keeping feed by them all the time, and also to the dry bran which I keep before them now. If I let the bran supply run out for a day or two, the egg yield soon falls off. I also find the dust from under the clover huller, if from clover that has been put up without getting wet, nearly as valuable for mixing in the mash as clover meal and much less expensive.

MRS. TILLA LEACH.
Cheneyville, Ill.

White Wyandottes and Pekin Ducks

Greatest competition White Wyandottes and Pekin Ducks, winners in the greatest competition in the world; World's Fair champions; 1, 3, 6 and 7 on young Pekin hens; 2, 3 and 7 young drakes, 3, 5 old drakes and 4 old hen. Won 6th and special on cock in White Wyandottes, and 1 have the best in the world in my breeding pens for 1905. 1st cock, 3d cockerel, 1, 2 and 4 pullets and eight more pullets, sisters to the prize winners and a brother to the 3d prize cockerel.

Illinois State Fair, 1st, 2d and 3d on Pekin Ducks. No White Wyandottes were shown. St. Louis Fanciers' Association, Dec., 1903, won 1st breeding pen, 1st pullet and 3d cock in White Wyandottes and special for best pullet. Chicago National Fanciers' and Breeders' Association, 1905, won 1, 4 pullets, 1, 5 hen, 1, 3d chl., 2, 5 cock and three specials for best shape, and silver cup for the whitest bird in the show room on White Wyandottes. Pekin Ducks 1, 2 cock, 1, 2 hen, 1, 2 cockerel, 1, 2 pullet. White Wyandotte eggs \$3 for 15, \$5 for 30. Pekin Duck eggs \$2 for 11, \$3.50 for 22, \$7 for 50.

THEO. AMBROSIOUS

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL
Anywhere We Pay Freight
No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

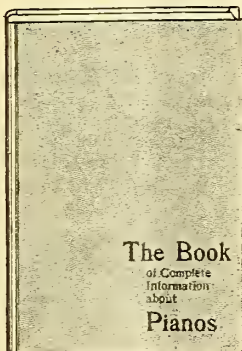

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by an ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. **WING ORGANS** are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

The Book
of Complete
Information

HAVE A SHADY RUN FOR THE CHICKS.

If a person is raising poultry on a small scale just for the pleasure there is in it or if he is engaged in it for a livelihood, he wants to have things arranged as convenient and healthy as his means will allow. I want now to suggest a plan for the runs that has been tried and proved to be very satisfactory. Where you are depending on the hens to do the hatching and rearing of the chicks you want your runs arranged where the hen cannot carry her young in dangerous places. In a yard twenty by thirty have the brood coops arranged in a row along one side of the fence. In the middle of the yard have the feed coop for the young chicks. In one end of this yard fence a place off about five feet from the outside wall, this should be done with two-inch strips. In this enclosure oats should be planted very early so when the chicks are hatched the oats will be about three or four inches high. The hens must not be allowed to go in this small enclosure but the chicks can go in and out at will. The earth in the yard should be dug up at least once a week, this gives the hens plenty of exercise and the chicks are able to get May bugs and insects from the ground. Anyone who has never tried the method of planting a patch of oats have no conception of the value they are to the growing birds. They are able to get many more insects than naturally infest such a place and this is of great advantage to the chicks; they also have a cool shady place to go in the heat of the day. Searching for the worms and then getting them both go to build muscle and bone for the bird and for a

general purpose fowl a weak loose-built bird is not the thing; a muscular, compact built fowl is what you want.

This run may also be used for chicks being reared in a brooder, but when this is done there is no use fencing off a place, as there are no old fowls to scratch up the plants. There should be some fruit trees in this yard to afford shade to the old birds and also the chicks would enjoy some of the fruit that falls. While young chickens are being confined in such a yard the food question should not be forgotten. I will not say anything in regard to the food only fine cut beef scraps are one of the best muscle developers I have ever tried. This yard applies to a place where the space is limited, but it can be used anywhere and at any time and be relied upon.

In regard to the number of hens to put in such a run I should say about one hundred or a hundred and fifty would be about right. I don't like to crowd but where the chicks have a place where they can be away from the other hens they are perfectly safe.

PATIENCE WITH POULTRY.

Patience is a strong link in the chain of success in poultry raising. A very strong link indeed. Lost patience, lost poultry profits is about the quickest way to express it.

As a rule, successful poultry raisers possess an exceedingly large amount of patience; and if this were not true, few of them would ever rise to that plane called success.

Few of the old breeders require any caution in this direction, and no greater

number of young fanciers would if they but stopped to consider that every step must be a step forward and not backward.

It is not always lack of ambition over which we lose our patience, but rather over zeal. Because a hatch does not come off on a scheduled time, up go our bristles and the feathers fly.

Occasionally we meet an old breeder who fails to hold his temper when things go wrong and also we note that venting his spite on the birds but lays another stone wall across his path.

If our birds were possessed of human intelligence and speech there might be the smallest atom of excuse but we must remember that by our own teaching the dumb brutes and the fowls have come to look upon us as their friends and expect food and kind treatment; not kicks and cuffs.

I know an old breeder who has raised and brought out many good birds, and yet he annually spoils about as many as he brings to maturity by his impatience. There is scarcely a bird in his yard that he can pick up without a great effort and much struggling and squawking on the bird's part. They are simply afraid of him. That chickens have a memory, and a good one too, is plainly shown in this case. He has some birds 2 or 3 years old that will simply go frantic when he endeavors to handle them. But he is improving for he has learned many an expensive lesson for some of his birds have lost in the show room because of their wildness.

Although most of us know it is a critical time, how many of us can resist the temptation to meddle with the eggs when it's time for biddie to bring off her

MAY R. POULTRY PLANT

D. T. ROOTS, Prop., Connersville, Ind.

brood? On account of too much moisture or some other cause she is delayed a day or two. Then we become impatient and crack an egg or two. Likely as not we find a live chicken but we have simply spoiled its chances of ever hatching. By our haste we have caused it to bleed to death. The process inside that shell was not complete, consequently the chick not ready to hatch. Another possible prize winner's chances spoiled. Regrets are useless. We know we ought not, yet we did.

An ambitious pullet mounts the fence and hies herself to greener fields. Can we blame her? Over in the garden the grass is green, the berries are ripe and bugs are plentiful. Why shouldn't she have a taste of the world's good things?

She knows not why she is a prisoner. Then do we have ample patience and coax her back with bits of choice edibles or do we take a club and chase her, and thereby drive her everywhere but the place we wish her to go? Coaxing will get her back in that yard in just as good condition as she left but chasing out will result only in scaring her out of a month's growth, retard her actions and make her just so much later in arriving at an egg producing stage. Just how much damage it has done we cannot tell for we have not given her a chance to show how good a bird she would have become.

It's all because we don't stop to think at the time. Just think three times before acting in these cases and spare the birds.

And what will the pullet be doing all this time? you ask. Scratching and picking away at out dollar-an-ounce seed I suppose, or filling her crop with our 15-cents-a-quart berries. But isn't she worth it? If she isn't, better cut her head off and eat her.

We lose our patience because the rats, cats and dogs create damage in our yards but wouldn't we accomplish much more if we went about effecting a remedy in a cool, systematic way?

That is where the women folks just lay it all over us poor, quick-tempered men. They possess the necessary patience to make poultry raising a success and who ever heard of one of those kind failing.

Kindness wins what force cannot gain. Nothing could be truer than that old adage.

When our fowls get lousy, do we all have the patience to take up each bird and carefully dust it with insect powder or louse killer, or do we just scatter a little exterminator around and say "guess that will fix 'em."

Sooner or later we must learn the lesson of patience in the poultry yard and if we do not, we will soon be out of the business from a successful point of view.

BREEDING PEN.

In mating up breeding pen it is absolutely necessary that we know something of the pedigree of our breeding stock, as in this way only can we mate for best results. Then again we should not always have a given number of females for each pen, as it sometimes happens that we do not have a sufficient number of birds that are of the same type to make up what is usually called a pen, namely, 10 females and one male; if not, let us use whatever we have of this type and in this way secure best results.

E. H. GAINES, Prop., GAINES' POULTRY YARDS, GAFFNEY, S. C.

Cut Incubator Expenses IN TWO

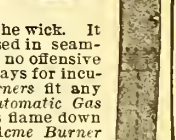

ACME SPECIAL BURNERS are made in two sizes, No. 1 and No. 2. No. 2 makes more heat and light than any No. 3 burner, and uses 20 per cent less oil. The Acme Trip Burner saves ½ the oil, because regulator turns flame up or down. Can't overheat or char the wick. It requires no trimming, is twice as thick as other wicks, and encased in seamless metal tube with composition burner tip. No smoke, no soot, no offensive odor. These wicks are for Acme Burners only, and last 30 to 60 days for incubator use and 12 to 18 months for ordinary house use. Acme Burners fit any lamp. Give size of lamp collar when ordering. The Acme Automatic Gas Valve saves 75 per cent of gas for incubator use. Regulator turns flame down or up. Burner tip can be located any distance from valve. Acme Burner with wick, either size, prepaid, 75c. Acme Trip Burner with wick, either size, prepaid, \$1. Extra wicks, either size, prepaid, 10c each, 3 for 25c.

ACME AUTOMATIC LAMP AND COMPOUND REGULATOR

will make your old machine do better than it ever could do, besides save you many dollars and much annoyance. Its combined damper and flame regulation alone saves half the oil. Its burner saves danger from fire—can't overheat. Its wick saves trimming—never needs it. Its regulator controls both flame and damper (see cut); this avoids too high or too low a flame. It makes hatching or rearing pleasurable and profitable. Sold separately or together. Fits any machine: any one can attach it. Send for catalog giving detailed description and our full line of fixtures, including illustrated plans for building the famous Peerless Incubators and Brooders. Nearly 100 photographic views showing step by step every stage of incubator construction. This book is worth a good dollar of any man's money and is sent merely for the asking. Write your name and address on a postal now and mail to us.

H. M. Sheer Co., Box 104, Quincy, Ill.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

INTERNATIONAL ROSE COMB BLACK MINORCA CLUB.

The International Rose Comb Black Minorca Club was organized at the recent Boston Poultry Show, to advance the interests of Rose Comb Black Minorca breeders who will breed creditable stock of the variety and to discourage everything which would tend to place the Rose Comb Black Minorcas in disfavor. By thus uniting in a club, breeders can raise the already high standard of the grand variety, breed better birds and help each other to get better prices. Anyone who has good Rose Comb Black Minorcas can by being a member of the club, command much higher prices than most breeders are now receiving for them.

The Rose Comb Black Minorcas are worthy of all the well directed efforts that can be exerted in their behalf. They have come to the front by their own efforts and are now the most popular and highest valued breeds of poultry in the world. Thus far they have not been helped by any organization for though a small club purported to have been formed, it did not hold meetings nor circulate literature, therefore could not be considered a help.

The International club, though of only a few weeks standing has already a good membership in Vermont, New York, Indiana, Pennsylvania, New Hampshire, District of Columbia, Michigan, North Carolina, Montana, Washington and Nova Scotia and Ontario, Canada. We wish to have as many members enrolled as possible before issuing a printed list of members which we shall soon do and we expect, before the year closes, to have this club among the best of the new clubs and standing well among the old ones. Other advantages which a club of this kind offers to breeders are the sociability enjoyed and profited by, of meeting together and circulating literature in which all of the members are

equally interested, and one feature which is perhaps of as much real value as anything is that breeds which are represented by a good working club are in more favorable repute among the poultrymen and thus gain much greater prestige in the mind of the public than breeds which are not so represented.

We have adopted the by-laws of the American Black Minorca Club for this club with the exception of the name of the club and the substitution of "Rose Comb Black Minorcas" in place of "Minorcas" in every place where the latter occurs. Fees for membership are \$2 for initiation and one year's dues and \$1 per year afterwards. If you will send \$2 to me for that purpose, writing your name and address in full, including street and number or box number, as the case may be, I will see that you are properly enrolled and that you have opportunity to share in all the benefits which the club offers. Yours truly,

GEO. H. NORTHUP, Sec'y. & Treas.
Racville, N. Y.

PIERCE CITY & MONETT POULTRY ASSOCIATION.

The Pierce City & Monett Poultry Association held its third annual election of officers March 23, 1905, when the following officers were elected for the ensuing year: J. G. Kelley, president; Mrs. C. W. Haines, first vice-president; W. H. Smith, second vice-president; Thos. Carlin, secretary, and J. E. Coppock, treasurer. Board of Directors: Dr. B. F. Lazenby, W. Henry Smith, Jas. Doyle and A. Parkhurst.

C. A. Emry, of Carthage, was judge of the two last annual shows, and has been engaged to judge the next, to be held Nov. 27 to 30, next, inclusive. At the outset, the purpose of the organization was to afford easy facilities to local fanciers, to acquaint them with the requirements of the standard for the

best poultry. Results have been very satisfactory. The association now has a membership of about sixty. An increased variety of fowls have been introduced, including many of the best breeds, and the stock is much better cared for. Many incubators have been introduced, new poultry houses erected, and poultry feed provided more plentifully than formerly. Members of this association would now be willing to enter with the best shows in full confidence of receiving a share of the ribbons.

TRI-STATE FANCIERS.

The Tri-State Fanciers' Association held an enthusiastic meeting at the Commercial House, Monday evening, March 13, for the purpose of electing officers and transacting other business of importance.

The following are the officers for the coming year: President, T. N. Babcock; Vice-President, A. W. Ransom; Treasurer, Lee Stover; Secretary, Rose E. Sandford; Assistant Secretary, C. A. Doner. Board of Directors: Term of one year—Geo. E. Tuck, S. W. Whitford; term of two years—C. Emminger, H. S. Fletcher; term of three years—Chas. White, E. M. Barker.

With a membership of over seventy members for a "starter," the association bids fair to assume large proportions, and as soon as the board of directors can perfect plans for carrying on the good work, new members will be added from other states, the territory designed to be included being South Dakota, North Dakota and Minnesota. Membership certificates will be issued to all members, which membership card covers a period of one year, and is non-transferable, and will admit the owner to the annual show for that year.

The object of the association is to encourage the breeding of good stock, in our poultry, dogs and pet stock, and to this end, to hold shows and exhibitions where owners may have an opportunity to see and know the worth of well bred stock, as prizes will be awarded on actual merit. A judge will be selected by the board of directors, who aim to secure a man thoroughly posted, and known to be impartial.

This association will bring fanciers from abroad, and will give Watertown an opportunity to extend the hand of

THE RESULTS WE LOOK FOR

Is found in the many letters we receive from well pleased customers. Jewel Chick Feed is all grain; no mill sweepings and refuse used. Chicks eat all of it; that is what pays.

POULTRY SUPPLY DEPARTMENT,
International Stock Food Co., Minneapolis, Minn.

GENTLEMEN:—Enclosed find draft for \$2.50 for which please ship to my address as soon as possible 100 lbs. of Jewel Chick Starter. I already have 100 young chicks and I find your Chick Starter to be one of the best foods a poultryman can use. I hope you can forward my order at once as I need it.

Yours truly,

OSCEOLA, IOWA.

O. C. SANDERS.

We are general distributors of Midland Poultry Food, the world's famous balanced mash ration; prepared by men who know what feed should be. International Louse Paint and Powder are the most successful preparations known for exterminating lice vermin. International Beef Scraps contain more protein than any other beef scraps known. welcome to the strangers within her gates, and sustain her reputation as the city of hospitality, and the members earnestly solicit the assistance of all in order that the organization may become strong and permanent, and an institution of lasting benefit to the members and to the community at large.

NATIONAL WHITE WYANDOTTE CLUB.

The 1905 catalogues of the National White Wyandotte Club are being mailed out by the secretary. The catalogues contain 160 pages of valuable reading matter and the advertisements of nearly 200 members of the club. The club has now in the neighborhood of 1,400 members with nearly every state in the Union represented. There are enough members in some states alone to form a good sized club. The catalogues are indeed a great credit to the White Wyandotte fraternity, and a copy may be had free by addressing the secretary,

Ross C. H. HALLOCK.

St. Louis, Mo.

STORY COUNTY POULTRY ASSOCIATION.

The Second Annual Poultry Association Holds Its Next Exhibit at Roland, Ia., Dec. 12, 13, 14 and 15, 1905.

Roland, Ia., March 22.—The Story County Poultry Association met and elected the following officers for 1905: President, E. F. Bell; Secretary, Ed. Osmondson; Treasurer, J. M. Mason; Manager, E. A. Cole. Executive Committee: H. E. Myrah, T. P. Hermanson, Dr. E. A. Rice.

Roland can truthfully boast of more real poultry fanciers than any town of its size in the state; also more thorough-bred poultry.

FRESNO, CAL.

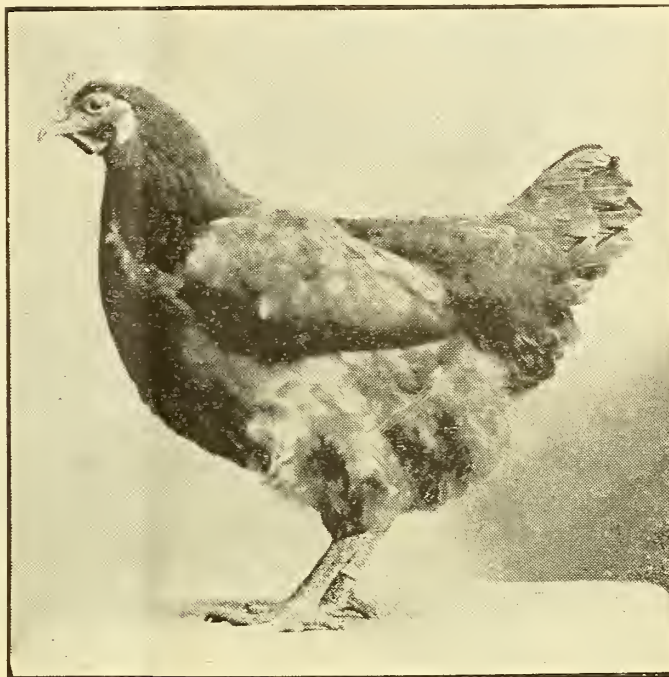

The Fresno Poultry, Pigeon and Pet Stock Association has selected for judges of the next show, B. M. Woodhull, of Stockton, and R. J. Venn, of Fresno, both old, reliable, tested and trusty judges. Venn will judge the Plymouth Rock classes and Woodhull all other classes in the show. The show will be judged by comparison. This will be the first show so judged that has been held by this association. The dates selected, Dec. 13 to 19, 1905, follow the Alameda

show by a few days, thus giving exhibitors a chance to exhibit at both shows. Our dates have been decided upon and will not be changed, as we deem it wise to make a circuit of the California shows if possible, and that was our principal object in selecting the dates we have. The Southern California shows, which are usually held after this date, can, we hope, be made to follow ours by a few days, thereby making the circuit as complete as possible. We hope that our days will not conflict with those of any other

in Armory hall, which is the largest hall in the city, perfectly lighted, convenient, and of sufficient size to allow us to coop all the entries in single tier coops.

All our shows heretofore have been so cramped for room that we were compelled to use double tier coops and a great deal of the beauty of the show and birds were lost thereby as the light was greatly impaired by reason of the double coops.

It is our aim and intention to offer valuable cups for each of the principal

RHODE ISLAND RED HEN,

Winner of first prize at World's Fair, St. Louis. Bred and owned by C. N. Hansen, Warsaw, Ky.

association, and they do not as far as we have been able to learn.

We have had a two years' rest and everything now points to having the most successful show this year that we have ever held. The members are all taking hold with a vim and intend to leave no stone unturned to make it an unqualified success. The association has partially been reorganized and a number of amendments to our by-laws have been adopted, and we are on a better working basis now than for several years past. The show will probably be held

classes and cash or special prizes for the best individual specimens and pens in every class. Also handsome ribbons for the winners. We also hope to have at least a partial set of new, modern coops.

The hall in which we expect to hold the show will be by far the best that we have ever had. The light by day will be almost as good as an out-door light, and by night the hundreds of electric lights will make it almost as light as day.

The fanciers in this section are looking forward to the coming show with much interest and enthusiasm, and are

Hansens' World's Champion R. I. Reds

Winners of more cash and special prizes at World's Fair than any other exhibitor. Won every first prize at Madison Square Garden, N. Y., 1905, and three specials for color and shape on only four entries. Our birds had to be shipped 1000 miles and still they beat all that is called the best, but breeding will tell. At Chicago, Dec., 1904, we won all 1sts and Silver Cup, Rose and Single Comb competing. At Warsaw all 1sts and Silver Cup for the five highest scoring birds in the show room. Also won all 1st prizes at Indianapolis, Louisville, Hamilton and East Enterprise. Our eggs are \$3 and \$5 per setting. After June 1st at half price. If you want quick maturing and fine winter layers get the famous Hansen Reds.

C. N. HANSEN

Vice-President Rhode Island Red Club

Warsaw, Kentucky

already picking the winners from their flocks for special care and attention, and as all the local fanciers are constantly improving their flocks, better specimens than ever before will be shown.

We hope to procure a larger entry than formerly from outside exhibitors and will guarantee fair and courteous treatment to all exhibitors and first class care of stock while in our charge.

The exhibition hall will be of sufficient size to allow considerable space for incubator displays, etc., and the first come will be first served in this respect.

GEO. R. ANDREWS, Sec'y.

MILWAUKEE, WIS.

At the third meeting of the Wisconsin Feathered Stock Association twenty-six new members were admitted, bringing the membership up to eighty-five.

At the session plans were discussed for the annual show to be held on Jan. 22-28. Efforts will be made to procure the Exposition building for the show.

The subject of pigeon judges was discussed, and efforts will be made to procure the following judges: J. M. Frausens, Green Bay, to judge homers, and Messrs. Plain and Muir, of Chicago, to pass on the fancy pigeons. A great step forward was taken, when the resolution was adopted to get out and advance the premium list to be issued on June 1, pertaining to all classes, premiums and prizes offered up to date. The complete and official premium list will be issued about Sept. 15. The committee, in whose hands this subject was placed, are Messrs. Theodore Koos, Wm. Stewart, M. A. Freedy, O. E. Dunning and C. G. Loeber. About 10,000 copies will be printed. Another good feature will be the erecting of a bulletin board in the meeting for the purpose of buying and selling stock by members. It was also decided to supply Messrs. Theodore Koos and C. G. Loeber, president and secretary of the club, with a list of birds bred and for sale by each member.

Three interesting features for the next meeting on May 3 will be the report of the committee on a suitable hall for the 1906 show to be held on Jan. 22-28; the Exposition building seems to be the most favored; the selection of pigeon judges, and a full discussion of the proper erec-

tion of poultry buildings by Architect F. W. Andre, who for years has made this a close study. All fanciers are requested to join the club. The membership fee is only \$3 and the dues 25 cents a month, certainly within the reach of all.

Any information on by-laws and application can be procured from C. G. Loeber, 1717 Walnut street.

THE TACOMA POULTRY SHOW.

The Tacoma Poultry Association are making big plans to have a large exhibit of their best birds at the big Lewis

BLACK ORPINGTON.

First prize cock at Chicago, 1905. Bred and owned by C. S. Byers, Hazelrigg, Ind.

and Clark fair. In order to advertise their annual show, which will be held in Tacoma, December 27, 1905, to January 1, 1906, they will get out their annual premium list at once and will distribute a number of copies at the big show. This premium list is to be made the finest thing of the kind ever issued on the coast. We will take a limited number of advertisements from the eastern breeders and we would be glad to hear

from them at once. In this big premium list we will sell pages at \$10.00; half pages, \$6.00; quarter pages, \$3.50. Write at once to the committee, W. R. Sears, S. W. Geer, or Harry H. Collier, City Hall, Tacoma, Wash.

MOHNSVILLE, PA.

Mohmsville, Pa., Poultry Association was organized under the name of Wyomissing Poultry Association with about 50 members and decided to hold their first show from Dec. 19 to 23, 1905, in the K. of P. Hall where the association will meet the second Saturday night of each month to transact their business.

The following officers were elected: President, J. G. Werner; vice president, J. H. Fichtorn; secretary, Geo. W. Hatt; treasurer, A. O. Fisher.

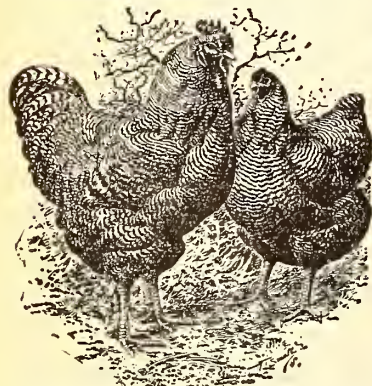

This place is located five miles southwest from Reading, Pa., and is easily reached with the Reading and Southwest trolley line within one-half a square from the hall. The place has a population of 2,000, with some of the best locations for poultry in the state. Liberal premiums in both regular and special, which will be open to the competition of the world, will be offered with all members working with one end in view to have one of the best shows in the state. We would invite all fanciers of poultry to join our association. And especially would we extend a cordial invitation to all exhibitors to show at Wyomissing Poultry Show, Mohmsville, Pa., next December.

GEO. W. HATT, Sec.,
Mohmsville, Pa.

LA CROSSE, WIS.

The poultry fanciers of La Crosse, Wis., recently met and organized a permanent association to be known as "The La Crosse Progressive Poultry Association." A large number of breeders were present and very much enthusiasm was shown. The following officers were elected for the present year: President, Robert Engelke; vice president, R. W. Gifford; secretary, H. J. Hahn; treasurer, Ed. Johnston; superintendent, O. W. Nass.

Arrangements have been made to hold a show Jan. 21-27, 1906, with Theo. Hewes to place the awards. The mem-

Order direct from this ad or send five cents for our large illustrated catalogue, which describes forty leading varieties of standard-bred fowls. We give all orders prompt and personal attention in selection of eggs, shipping and packing. We guarantee our eggs to reach their destination in good condition. Broken eggs will be replaced free of charge. We are better qualified in filling orders this year. We have more new house room, more yards and larger mated pens of better stock than ever before. Our remarkable growth is credited to our honest and square dealings with our customers. We can boast of having as many pleased customers as any breeder in America. Send us your order and be convinced of our honest dealings. We will treat you in such a manner as to have your orders in the future.

GEO. P. HARTMAN & SON, Box D 193, FREEPORT, ILL.

Glenwood Poultry Farm

Do You Want the Best

We can sell you eggs that will hatch the prize winners. We have in our yards birds that won 1st and 2d in Iowa, Wisconsin and Illinois. We have won hundreds of premiums in the past five years, which shows the quality of our stock. We have bred fancy poultry eight years and know something about mating, showing and breeding, and if you place your order with us you certainly will get the benefit of our experience. Our yards contain birds scoring 90 to 96 honest points, and eggs bought of us ought to surely hatch prize winners.

EGGS FROM Pekin, Rouen, Indian Runner Ducks, \$1.75 per 11, \$3 per 22, \$6 per 50.

M. Bronze and W. Holland Turkeys, \$2.75 per 9, \$5 per 18, \$10 per 40.

EGGS from the following varieties, \$1.75 per 13, \$3 per 26, \$5 per 50, \$9 per hundred.

bers of this association are a class of energetic, hustling fanciers, who will spare neither time or expense to make this show a complete success.

H. J. HAHN, Sec.

WEBB CITY, MO.

A poultry association was organized at Webb City, Mo., which will be known as the Mineral Belt Poultry and Pet Stock Association. A show will be held at Webb City Dec. 6, 7, 8 and 9, 1905. C. A. Emry, of Carthage, Mo., will judge. Mr. C. Baker, of Webb City, is secretary.

FORT WAYNE, IND.

The People's Poultry and Pet Stock Association recently organized at Fort Wayne, Ind., will hold a show Dec. 11-16, 1905. T. E. Orr has been selected to do the judging. P. A. HELLER, Sec., Fort Wayne, Ind.

SIoux FALLS, S. D.

The Queen City Poultry Association will hold their third annual show Jan. 16-20, 1906. G. D. Holden judge. Stacy S. Metcalf, Sec., Sioux Falls, S. D.

DAVENPORT, IOWA.

The annual show of the Tri-City Fanciers' Association will be held Dec. 11-15, 1905. Jas. A. Tucker, judge. At this show there will be offered a large list of cash specials, besides the regular cash prizes. J. B. Voss, Sec., Davenport, Iowa.

SEBRING, OHIO.

The Sebring Poultry and Pet Stock Club was organized March 6, 1905, and they have decided to hold their first show Jan. 9-11, 1906, with Ira C. Keller as judge. M. J. Stevens, Sec., Sebring, Ohio.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Some time ago, my attention was drawn to an article in the AMERICAN POULTRY JOURNAL in which my friend, Mr. Chas. S. Brent, requested a report from me as former Sec'y-Treas. of the Indiana Game Club of America. I am pleased to say I was Sec'y-Treas. for one year, Jan'y, 1900, to Jan'y, 1901, and when my predecessor, Mr. Adam Thompson, handed over the work to me there were just twenty members in good standing, i. e., annual dues paid up, etc., and \$17.00 in the treasury. During the year, forty members joined and after paying expenses, including printed matter, such as the annual report, circular-letters, envelopes and the postage on considerable correspondence, I was able to hand the work over to my successor, Mr. C. S. Whiting, Corfu, N. Y., in a thriving condition with sixty enthusiastic members and about \$45.00 in cash. From the latter, Mr. Whiting had to deduct the cost of two cups, one for the New York, 1901, show, and one for the Chicago show of the same year. But to the remainder should be added about \$40.00 which I understand Mr. Whiting received as funds from Mr. J. H. Drenstedt who, I believe, was Sec'y-Treas. before Mr. Adam Thompson took up the work. Further information, I am unfortunately unable to give, but if it is needed, I presume it may be secured by addressing Mr. Whiting as I

believe he is still secretary of the old club.

I understand we are on a fair way to have a new club as Rev. H. A. Huey, Casnovia, Mich., has kindly consented to be Sec'y-Treas. of the American Indian Game Club until next winter when a

meeting will be called to elect officers and accept a constitution, etc. I shall be pleased to send him \$1 and my application for membership and I trust many others may do likewise as our breed is worthy of an enthusiastic club.

W. S. TEMPLETON.

Barred Rock Eggs For Hatching

from Chicago prize winners, \$2.50 per setting, \$4 for two settings \$12 for 100.

BE YOUR OWN BOSS.

Wake up! ye downhearted shop-laborers. Why confine yourself in a dirty, unhealthy factory and let some great swell toss you about from one place to another?

Here you stand day out and day in, week out and week in, yea, even year out and year in. What have you gained at the end of the year? Merely a scant living and losing your health by doing so. What can be more pleasant than to spend your time at home; not in being idle, but supporting yourself and family, a way far better than confining yourself in a stuffy old shop your whole life.

Possibly you have been able to save a few dollars; engage them immediately. Go to an honest lumber dealer and purchase some lumber. Get to work and build yourself a chicken house. When finished with windows, door, tarpaper, nails, etc., it will not exceed ten dollars (\$10) in cost and will be large enough if properly built to accommodate two dozen laying hens.

Well now, take five dollars and get one setting of eggs from some reliable chicken firm, or say ten dollars, if you have it, and also get three hens for about 75 cents apiece; any kind will do to start with, and in twenty or twenty-two days you will have a good start in business of your own. You will be surprised to find how soon they will mature and pay for themselves many times over before two years have passed. Year after year you will increase your stock both in quantity and quality by careful breeding and will be able to get a good prize for your trouble. At the same time you can be your own boss and enjoy yourself in the open air, which is very essential for human beings. Instead of going to the shop when the whistle blows you can stay at home and run your own business at the same time having leisure moments to study up on poultry by reading the AMERICAN POULTRY JOURNAL.

Do not misunderstand me; I do not mean to say chickens do not need regular meals. They positively do; also good care in keeping them free from lice. Always have clean dry sand in one part of house for dusting, and never feed a hen corn too frequently, if you want any eggs. Oats is a very good egg producing grain, which should be fed in the morning; at noon a mash is made from the following: Cooked potatoes and any other vegetable, bran, corn feed and ground up bones and meat. The latter may be had at any butcher's for a very small sum. Supper: One part wheat and two parts oats. Never neglect fresh, clean water every day, and always keep oyster shells and grit on hand. Great many people think hens must be fat in order to lay, but that is a mistake.

Never overfeed of anything, but always feed regular, as well as same quantity to matured stock and you will be well repaid for your accuracy.

Mrs. E. THOMPSON.

Battle Creek, Mich.

SELECTING EGGS FOR HATCHING.

The largest eggs do not always hatch best. A good, average sized egg will give the best results. The size of chicks depends altogether on the breeders. Select large females and shapely males, as the female governs the size and the male the shape.

Mrs. J. H. OREBAUGH.
Batavia, Ohio.

Special
Matings**

Order direct from this ad and save time, worry and trouble

We can ship eggs any distance with perfect safety and guarantee hatch. Our matings for this season will simply be immense—fourteen yards, and not a bird that shows a tinge of brass or straw color. They are absolutely white, stay white, and are all winners. Note our winnings in catalogue, and also our last show of 1904; is not that proof of our claim. "THE WORLD'S BEST?"

At the Indianapolis State Poultry and Pet Stock Show, 1904 winning seventeen prizes out of twenty-one entries, besides \$25 silver cup given by White Wyandotte Club for best display, W. Wyandottes and many other specials: 1. 2. 4 cocks; 1. 2. 3. 4 cockerels; 1. 2. 4. 5 hens; 1. 2. 4. 5 pullets; 1. 2. 3 pen. Now is not that convincing evidence that Fishel's Strain of Stay White Wyandottes are the original world's best? If your stock lacks in head points, pureness of color, or the typical Wyandotte type, you should certainly improve your stock. This you can do by making a small investment in eggs with us.

OUR GUARANTEE: We guarantee nine chicks to each setting of fifteen eggs, or if the purchaser fails to get this per cent, we will duplicate the order at one-half price. We feel that any of our customers having the confidence in us to place their orders with us, we should have equally as much confidence in them to take their word for report of hatch, hence this proposition. Send for catalogue.

CHOLERA

IS THE DEADLY PLAGUE

OF THE POULTRY YARD

CHOLERA and its kindred diseases, Indigestion, Bowel Trouble, Diarrhoea, Dysentery, Sour Crop, etc., attack alike the young chick and the old fowl. Thousands upon thousands are lost each season from these causes, and the year's profits dwindle to nothing.

Conkey's Cholera Cure

is the result of years of our most careful study and research, and is guaranteed by us to be an absolute and immediate cure for these diseases. You cannot afford to be without it.

It may save you a large amount of money this season.

It is given in the drinking water, and requires no labor on your part.

It is tasteless—its presence cannot be detected by the flock.

It is eagerly taken, as fowls with these diseases are very feverish.

It is not expensive—a little goes a long way.

It is good for Turkeys as well as fowls.

It is harmless, and will not injure sick or healthy fowls.

It is guaranteed by us to satisfy you—If it fails, your money back—no question. Just money.

Don't fail to try this wonderful remedy. Send for it today and be prepared to check these troubles at their first appearance. Given occasionally, is a sure preventative. If your Druggist or Poultry Supply Dealer cannot supply you send order direct to us. We will forward on first mail.

Price, 50 cents per box, postpaid.

PHEASANT RAISING AS A BUSINESS EXCEEDINGLY BEAUTIFUL AND CAN BE MADE PROFITABLE.

BY FRANK FELL.

The breeding of pheasants as a business in this country is as yet in its infancy. I look forward to a great future for this hardy game bird. I say hardy for while the young pheasants can not be called hardy the mature birds are extremely so, standing our severe northern winters with no apparent discomfort. There are many varieties of pheasants, but the English ring-neck is most largely bred and is considered most suitable for stocking game preserves. The plumage of the cocks is very beautiful while the hens are arrayed in more modest hues. The body of both male and female is very compact and they furnish in proportion to their size an abundance of fine grained juicy meat, that will when properly cooked tickle the palate of any epicure.

The other breeds of pheasants are raised mainly for their beauty and a pen of golden pheasants would be an ornament to any well kept lawn. The reader will find in any good cyclopedia a description of the different breeds and crosses.

The eggs of the English pheasant are as a rule very fertile and a ninety per cent hatch is not an uncommon thing. The rearing of the young birds is, however, the difficult part of the business. To be successful one must procure eggs from stock that has not been inbred for too long a time. As a rule the common hen is used to incubate the eggs and brood the young. For this purpose select a hen of medium size and mild disposition and be sure that she wants to sit. Having constructed the nest, which should be on or near the ground, place the hen on the nest and give her two or three common eggs to set on for a day or two, after which they may be removed and the pheasant eggs placed under her. If all goes well the young pheasants will make their appearance in from twenty-two to twenty-four days. They should be left entirely alone for twenty-four hours—this is very important. The shells and any infertile eggs that remain may be removed but further than this they should not be disturbed. At the end of twenty-four hours the hen and young birds may be placed in the brood coop—any coop suitable for chicks will answer the purpose. Each coop should be furnished with a small yard about 3x6 feet and 1 foot high, sides and top covered with one-half inch mesh wire. The young birds are wild little things and would scamper off in the deep grass and get lost, unless provided with a yard such as I describe. It will take the young birds a day or two to learn their foster mother's call and they will have to be tucked under her a few times until they know where to go for warmth.

The question of food is an all important one. A custard made by adding one tablespoonful of sweet milk to one hen's egg, beating together and cooking until quite dry and crumbly, is excellent for the first few days; it should be fed sparingly, never more than they will eat up clean in a short time; if any remains remove it. It is a mistake to leave food before them at all times; feed a little at a time and often; say every three hours. Some fine grit should be provided so that they can help themselves. Green food

of some kind is almost indispensable; tender lettuce and chickweed is greatly relished by young pheasants. After a few days they may be given a few ant's eggs, which is one of the natural foods of pheasants in the wild state. Do not overfeed as it is apt to bring on bowel trouble which is quite fatal. Perhaps more young pheasants find an early grave through overfeeding and its subsequent evils than from any other cause unless it be lice. Dampness is another cause of bowel disorder. The young birds should not be let out in the morning until the dew is off the grass. The drinking vessels should also be so constructed that the bird can not get wet. If the bowels seem too loose a little scalded rice will be found a good remedy; it should be given as a regular meal—as much as they will eat up clean. Look out for lice, or rather look for lice. If any exist they will be found on the head and under the wings. A little Persian insect powder dusted on will remove them for a time, but they should be looked after often. Pheasants and lice can not be both raised in the same coop with any degree of success. When the young birds are eight weeks old the danger period is about past, when they may be fed wheat, cracked corn and an occasional feed of cut green bone. Spratt's patent game food is excellent for young and old pheasants. Old pheasants should be fed the same as chickens, except that they do not take kindly to soft food. The pheasant hen in confinement lays from forty to fifty eggs during the breeding season which is from April to July.

The later eggs as a rule do not hatch as well as do those laid earlier in the season, nor are the young as easily reared.

No expensive buildings are needed for housing old pheasants for in any but extremely cold weather they prefer to remain outside. Some arrangement for protecting them from the north and west wind should be provided. A hedge of evergreens would afford them proper shelter. The breeding pens should be mated up in March in the proportion of one male to four or five hens. Any food ration that is considered good for increasing the fertility of hen's eggs is recommended for pheasants during the breeding season. I believe that the time is not far distant when the pheasant will be found in the yards of many of our leading fanciers, for surely they have merits possessed by no other game bird. Mayville, Wis.

SHIPPING BIRDS.

When birds are shipped and cooped for three or four days I think they suffer more from thirst than food. The following is my way: Take a new, clean sponge, soak it out good in water, then drive a nail through it in top of cup in corner of coop; also another nail through to keep from tipping. Water spills out easily. This will hold it in place as the sponge soaks it up. Put another cup in opposite corner for feed. When putting on top slats leave opening above the cups, and they can be filled by express employees. A small bag of grain can be attached to coop. I also include a small head cabbage. Have shipped birds as far as Kansas, Texas and Massachusetts this way with good results. EDWIN W. STAEBLER. Cleveland, Ohio.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—What is Water Glass? We notice it mentioned in your paper several times as a good preserver of eggs, but we can find no one here who knows what it is. S. D. G. Co.

Wortham, Texas.

ANSWER:—We have had a number of inquiries similar to the above, therefore we give the following statement in regard to waterglass:

For several years the experiment stations have been making every effort to find a method by which eggs may be preserved more successfully and the results of the various tests made are quite interesting. Thus far the most promising results have been obtained from the use of what is known as waterglass. This in an inexpensive product, costing about 50c per gal. A gallon will make enough solution to preserve something like 50 doz. eggs, so that the cost is about 1c per doz.

Water glass is sodium and potassium silicate, sodium silicate being usually the cheaper. It can be purchased at all wholesale druggists and at most retail ones.

Among the stations which have given the preservation of eggs much consideration is that of North Dakota where the use of waterglass has been quite thoroughly tested. In a recent press bulletin issued by that station the following precautions and directions concerning its use are given:

The eggs to be put down by this method must be fresh and not stale store eggs. A few stale eggs will soon injure the entire lot. One party reports that he put down two lots of eggs, 50-gal. jars in each case: one lot strictly fresh eggs, the other contained some stale store stock; the first was a complete success while the second lot came out about like the ordinary packed eggs, some fair, some spoiled.

A good grade of waterglass must be used. Some of the cheap waterglass contains so much of free uncombined alkali that the eggs preserved in such solutions become watery and acquire a bad flavor. Waterglass in the form of heavy white jelly which flows like heavy cold molasses is to be preferred. Of this grade of waterglass somewhat less is needed than when the thinner product is em-

ployed. The dry powder waterglass has not as a general rule dissolved fully in hot water, and for that reason has not proven as satisfactory as the first named product.

Galvanized iron vessels, crocks, jars, etc., may be used in which to preserve the eggs. Wooden kegs of good quality are satisfactory, but these must be thoroughly sweetened by scalding with boiling water. There have been a few complaints that barrels have not been entirely satisfactory as the waterglass dissolved some products which deposited on the eggs.

In preparing the solution use pure water that has been thoroughly boiled and then cooled. To each 10 qts. of water add 1 qt. or slightly less of waterglass. When the heavy jelly-like solution is used, $\frac{3}{4}$ -qt. of waterglass will be ample.

The solution may be prepared, placed in the jar and fresh eggs added from time to time until the jar is filled, but, be sure that there is fully 2 in. of waterglass solution to cover the eggs.

Keep the eggs in a cool, dark place and well covered to prevent evaporation. A cool cellar is a good place in which to keep the eggs. If kept in too warm a place the silicate is deposited and the eggs are not properly protected. Do not wash the eggs before packing, for by so doing you injure their keeping quality, probably by dissolving the mucilaginous coating on the outside of the shell.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you kindly answer this question in your Question and Answer department: Is rice a good feed

JUST OUT! READY TO GO INTO THE
EVER DEPENDABLE PEEP-O-DAY BROODERS
READ WHAT USERS HAVE TO SAY:

RICHMOND, VA., April 7, 1905.
CORNELL INCUBATOR MFG. CO., Ithaca, N. Y.
Gentlemen,—I have 64 chicks in a No. 2 Peep-O-Day Brooder and they are growing like weeds; have not lost a one.
I don't have any trouble raising every chick with the Peep-O-Day, and it gives me pleasure to recommend it to my friends. Yours respectfully,
WALTER BURTON.

RICHMOND, VA., April 7, 1905.
CORNELL INCUBATOR MFG. CO., Ithaca, N. Y.
Gentlemen,—I have been a user of Peep-O-Day Brooders for several years, and can frankly say they are the best I have ever had or used in fifteen years' experience. Very truly,
DR. F. S. BULLINGTON, Sec'y,
Virginia Poultry Association.

ATTICA, N. Y., April 4, 1905.
CORNELL INCUBATOR MFG. CO., Ithaca, N. Y.
Gentlemen,—Last year I purchased one of your Peep-O-Day Brooders and placed 34 chicks therein; I raised everyone of them. That was good enough. Yours truly,
J. L. TURRELL.

CONNECTICUT AGRICULTURAL COLLEGE,
STORRS, CONN.
CORNELL INCUBATOR MFG. CO., Ithaca, N. Y.
Gentlemen,—The six Peep-O-Day Brooders recently installed in our new brooder house are working perfectly. We have recently had some very severe weather, but the baby chicks entrusted to these foster mothers are thriving and growing. Very truly yours,
F. H. STONEBURN.

We also manufacture a complete line of COOPS, COLONY HOUSES, AND PORTABLE POULTRY HOUSES. Send for Catalogue. Free if you mention this paper.

M. A. HAYS, Agent 225 Dearborn Street, Chicago, Ill.

for chickens? If so, at what age of the chick should you start feeding it? I can get it in the rough or clean state very cheap. **W. H. M.**

Beaumont, Texas.

ANSWER.—Rice is a very good food for fowls, except that it has a tendency to make them too fat. Boiled rice is splendid feed for young chicks and can be fed almost from the start. We believe that for mature birds rice in the rough state would be best.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Can you advise me of any remedy to keep hens from setting?

2d. How long a time will eggs keep before putting under hen or in incubator?

3d. Can you get good results from turkey eggs hatched in incubator?

O. W. B.

Chico, Calif.

ANSWER.—By confining the hen in a bare coop for a few days will generally have the desired effect.

2d. From three to four weeks; but for best results should not be kept longer than a week or ten days.

3d. Yes.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following questions in your journal:

1st. Should the incubator door be left open while turning the eggs?

2d. Why is it that chicks die in the shell?

J. J. F.

Cumberland, Md.

ANSWER.—1st. No. 2d. There are several causes for this. Frequently it is caused by the lack of fresh air during incubation. Sometimes it is caused by lack of vitality in the germ. Disease in the flock will also bring about this result. It is also caused by lack of moisture.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please give me through your "Questions and Answers department" the standard weight of Barred Plymouth Rocks, for cock, cockerel, hen and pullet?

C. M. R.

Toledo, Iowa.

ANSWER.—Cocks, 9½ lbs.; cockerels, 8 lbs.; hens, 7½ lbs.; pullets, 6½ lbs.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—How many Brown Leghorn hens should be penned with one vigorous cockerel of same variety? I have 20.

H. W. C.

Saratoga, N. Y.

ANSWER.—Where they are confined in limited runs, from 12 to 15 is sufficient.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer through the columns of your questions and answers department the following: If one would purchase ten or fifteen settings of eggs from different breeders and would get say one good bird from each setting, then mate them what would be the result of such a mating?

N. W.

Corydon, Ind.

ANSWER.—It is impossible to say what the result would be.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following question through your paper: Will thunder affect eggs during incubation?

O. C.

Lindewood, Ill.

ANSWER.—Not unless the lightning should strike very close to where the eggs are located.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you kindly let me know through the JOURNAL, what is the right color of Buff Orpingtons. Some I bought are dark yellow and some are pale, very nearly white color. I am a beginner in the poultry business and know nothing about them. J. W. M. Princeton, Ky.

ANSWER:—A rich golden buff throughout. They should not be too dark nor too light in shade, but should be uniform in color.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Would you kindly answer this question in your next issue of the AMERICAN POULTRY JOURNAL. Is strictly fresh beef blood good, or not better than fresh ground bone for laying hens? If it is how much would you give to twelve White P. Rock hens and how often? W. I. C. Ravenna, Ohio.

ANSWER:—Fresh beef blood is good for laying hens; but we do not believe it is as good as fresh ground raw bones. Two ounces to each bird three times a week is sufficient.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer in your next issue of AMERICAN POULTRY JOURNAL these questions:

1. What besides too fat a condition causes egg bound and what to do for it?
2. What causes broken down crop and can anything be done for it?
3. What simple home remedy is good for slight diarrhea in poultry? Have tried kerosene in food and drinking water, but they won't eat or drink it.

Mrs. G. E. W.

Twelve Mile, Ind.

ANSWER:—1. This may be caused by irritation of the lower part of the oviduct arresting the secretion of mucus and causing the mucous membrane to become dry and lacking in its normal lubrication. In the early stages when the irritation is slight, it is sufficient to inject a small quantity of olive oil and gently manipulate the parts. Afterwards give cooling food, and if hens are too fat, reduce the ration.

2. This is caused by a diseased condition of the muscles of the crop which

prevents the crop performing its natural functions and thereby becomes overloaded and thus strains the tendons which hold the crop in place. This condition cannot be successfully treated.

3. Put a handful of oatmeal in the drinking water or give boiled milk to drink. Give a tablespoonful of olive oil as a laxative to carry off any irritating matter that may be in the intestines, then follow with 1 grain of baking soda in a little water three times a day. A piece of camphor gum about the size of a pea is also good.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I have several hens that seem to be losing the use of their legs; they will totter along a short distance and then squat down as though their legs were weak, they eat well and don't seem to be sick. They are in good condition. Please answer in your next issue, tell me what ails them, the cause and cure. C. E. B. Plymouth, Maine.

ANSWER:—Rheumatism. Affected birds should have frequent change of ration, with plenty of green feed. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water and give 2 or 3 grains of salicylic acid twice a day.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer in your next issue of your paper the following question. My hens are troubled a great deal with being egg bound and they lay a great many soft shelled eggs. They can hardly walk for awhile, then they get rid of a soft shelled egg and are all right afterwards; but they get that way often.

Please tell me what is the matter and a remedy. They have oyster shell grit and old house plaster where they can get it when they want it. I feed them cabbage, turnips, beets, sweet apples and sunflower seeds twice per week. I feed some of the above green stuff every day. Their grain ration is equal parts, wheat, oats, corn and barley, fed morning and night. I feed a warm mash at noon with meat meal, I feed what they

will eat up clean each time, fresh water twice daily. They have dry, warm quarters. Grain is fed warm. O. B. West Winfield, N. Y.

ANSWER:—Fowls are probably too fat. Read answer to Mrs. G. E. W., Twelve Mile, Ind.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Last year my turkeys while sitting would pick their feet. One hen while hatching picked her feet until they looked like they were burnt, had to take her eggs from her. Shall be very grateful for any advice that you can give me through your question and answer department in regard to this. Mrs. G. H.

Flat Rock, Ill.

ANSWER:—Your turkeys were evidently troubled with vermin. Rid them of vermin and make them as comfortable as possible and you will not have this trouble.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer the following questions in your paper? Is the S. C. White Leghorn the most profitable for an egg producer? For a location would the southern part of Ohio or the southeastern part of Pennsylvania be better for winter layers than here? Is Cincinnati as good a market for eggs as other northern cities. G. W. B. Cleveland, Ohio.

ANSWER:—The S. C. White Leghorns are good layers, but we cannot say that they would be more profitable than some of the other varieties. Locate as near your market as possible. Cincinnati is considered a very good market for eggs and fowls.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer the following questions in your JOURNAL for a beginner:

If two years is long enough to use a bird as cock, what should be done with him? Is he then past his usefulness? Or still fit to put with another flock of same strain; and should a male of another strain be introduced into the flock?

How old is a hen before she is too old to use as a breeder? Which is best for the purpose—pullet or hen? If hen, to

A Paper Incuba

An April Hatch Report, 100 per cent or all chicks hatched. Air, and tons of it, does the trick.

tor and Results.

A one hundred and fifty egg machine weighs only eighty pounds.

Decatur, Ind., April 22, 1905. Gents—Just got a wonderful hatch from your Paper Incubator. I put 72 eggs in the incubator and got 65 of the largest and strongest chicks I ever saw—not one cripple, not even one dead in the shell, and not one had to be helped out. The temperature ran all the way from 98 to 106 degrees. This proves that an even heat and the regulator is not the making of a good hatch, but as you say tons of air and a natural heat, and not a bake oven heat.—JOHN LOSE.

Denver Mountain Light Air Climate Results. Denver, Colo., April 21, 1905. I was just out to the ranch and the chicks in your paper incubators are hatching something wonderful. I will report in full later. We have for years tried all makes. Hundreds of poultrymen could not get one-fourth of the chicks out of the shells. This New Natural Heat and Tons of Air Incubator will cause a revolution among us. Light, dry air, mountain climate. Poultrymen, hens can hatch all why not other incubators, but your incubator will do just what hens do here. We find the even heat and a regulator is all wind, a hen has no even heat by ten degrees. W. T. Beaus & Co. Brooder Reports; 100 per cent or all raised. Springport, Mich., March 14, 1905. We raised all the chicks in your Brooders.—Rev. Geo. Curtis. Oakland, Cal., Jan. 4, 1905. We have this year and last year time and again raised every chick put in your brooders on a large scale.—J. H. Crow. Armour Packing Co., Dallas, Tex. In 1904 we raised all the chicks put in your brooders on our ranch.—P. E. Gallot, Supt. Newark, N. J. We want three or four more brooders at once. We never saw chicks grow so, and all of them can be raised in your brooders. At last we found a brooder that has a natural heat and airy system.—F. Schroeder, 854 S. 14th St.

John M. Sontag, Patente, formerly with The Perpetual Hen Co., remains with the New company. Send 15 cents for catalogue and book, Natural Laws and Hens Secrets.

Your Choice of
BROODERS.
Four Styles—Five Sizes.

Cyphers Style A Brooder and Chick Shelter. Sold separately if desired.
(Our Catalogue illustrates four different styles of Brooders.)

Our ability to furnish you with Brooders to suit your individual requirements is unequalled. We have the largest Incubator and Brooder factory in the world. In 28 working days this spring we manufactured 2,652 Brooders of Four Different Styles, representing the Limit of Brooder Construction to this date. The real test of a Brooder is the actual work it does in the hands of men and women who have had no experience. Thousands of Cyphers Brooders are in operation by such persons and we have hundreds of letters telling of their good work. The following are examples:

"My best hatch with your Incubator was 65 chicks from 69 eggs. I raised them in one of your out-door brooders without the loss of one chick. I consider this is very good for a man who never operated a machine before."—W. H. Lawler.

"I received your brooder all right. You could not have it back for the same money. I put in 75 little chicks and raised every one of them. The brooder heats the hens. The Cyphers is indeed the brooder for the amateur as well as the expert."—Oliver L. Mace.

Don't risk losses of well-hatched chicks by using an inferior, wrongly constructed brooder. Having hatched your chicks, **Don't Court Failure.** Secure at once one of the following styles and be a successful poultry raiser.

Cyphers Unequaled Outdoor Brooder, Style A—We have manufactured these brooders during the past six years and the best proof of their merit is that thousands are sold yearly. This brooder is durably built, is fire proof, rain-proof, and storm-proof, and is a safe home for chicks. It is divided into two large, well-lighted apartments, insuring healthful sleeping quarters for the chicks. **Price, 100-chick capacity, \$12.00.**

Style B, Indoor Brooder—The Cyphers Indoor Brooder, style B, is first-class in every respect. This brooder has two separate apartments, thus supplying a temperature under the hover that is at all times several degrees warmer than that of the chamber outside the hover. **Price, 75-chick capacity, \$10.00.**

Storm King Outdoor Brooder. This is a combined brooder and colony coop and is manufactured in two sizes. The construction of this brooder permits the heating device to be taken out when the chicks no longer need heat, and this gives them the entire floor space, thus making a cool brooder. When it is time to provide them with roosting quarters, the floor may be removed and roosts placed on the floor cleats, thus making a well-lighted, well-ventilated colony roosting coop. **Price—No. 1, 50-chick capacity, \$6.00; No. 2, 100-chick capacity, \$8.00.**

Hare-Curtis Hygienic Indoor Brooder. This utilizes perfectly the diffusive principle of ventilation. It is composed of three apartments. It has a removable floor built in one piece, and an outer and an inner cover. The arrangement of these covers effects a graduated warmth from the outside atmosphere to the temperature of the brooding apartments. This brooder is made at as low a price as is practicable with first-class construction. **Price—100-chick capacity, \$7.50.**

The Tender Life of the Newly Hatched Chick

is strengthened by our scientifically mixed seeds and grains, which induce exercise, and by their great variety and wholesome condition put on flesh and muscle quicker than any other food on the market, while preserving health. "Wholesome" means much when applied to

CYPHERS CHICK FOOD.

It means that the whole, sound grain is used and that none of its valuable constituents have been removed. It is all there because we manufacture in our mill nothing but poultry foods—no breakfast foods, nor stock foods to consume the better part of the grain and leave the refuse for the tender little chicks that have not the strength to digest such coarse fibrous products.

QUALITY GUARANTEED.

We grind, mix, sack and seal all our Foods. On the authority of expert analysis and repeated experiments, we guarantee all Cyphers Foods to contain the proper ingredients in the right proportions to accomplish the results for which they are recommended. For the protection of our customers, all Cyphers Ready-mixed Poultry Foods are put up in sealed bags and packages, bearing the Cyphers Trade Mark, each bag being sealed with a lead seal with the word "Cyphers" stamped on one side and the word "Buffalo" on the other. Customers should refuse all bags which do not bear our seal, also those on which the seal has been broken or removed.

"PROOF OF THE PUDDING."

New York Winners Reared on Cyphers Food.

"I have used Cyphers Chick Food for two years with record-breaking results. All my New York winners were reared on this feed, and I shall never attempt to raise chicks without it in the future."—C. H. Welles.

Lost Not One Out of Four Hundred.

"We have used nothing but Cyphers Chick Food for our young chicks. Have not lost one out of more than four hundred. Neighbors have used other foods and lost many chicks. Yours is the best food on the market. I would not think of trying to raise chicks without it."

Mrs. Martha J. Rhone.

Free Samples of Cyphers Chick Food Sent On Request.

Our big 228 Page Main Catalogue will be sent Free if you give us the names and addresses of two persons in your district who keep poultry. What a CHATHAM Will Do

Grades Corn Perfectly

On Exhibition at Stock Yards, Chicago

The Chatham Fanning Mill has such a wide range of usefulness that its work comes under three important classifications:

It is a seed-cleaner, a seed-separator and a grain-grader—all in one.

Run through the list in all the seed catalogues you can find—the Chatham, with its seventeen screens and riddles, will handle any seed there, regardless of size or kind. It will take out the weed seed and dirt from grain and seed, no matter how foul it may be. It has taken out over twenty million weed seeds from a single bushel of unclean seed! It will clean and grade, at one operation, wheat, oats, rye, barley, timothy, clover, millet, flax, peas, cow peas, beans, velvet beans, corn, chufas, pecans, peanuts, rice, cottonseed, kafir corn, broom corn, tobacco seed, alfalfa, all grass seeds, cranberries, etc., etc.

It is a timothy seed sower. Its grading is absolutely accurate. We have a patent screen for succotash—that is, in taking oats out of wheat.

Capacity of the Chatham, 40 to 80 bushels per hour. Runs easily, either by hand or power. Has a bagging attachment that saves one man's time.

Every Chatham is guaranteed for five years—will last a lifetime.

Try It 30 Days, at Our Expense

Find out for yourself what an invaluable addition the Chatham is to your farming equipment—how quickly it will pay for itself and begin earning extra profits for you. Then pay part cash and take six months on the balance if you wish. Write today for our free Chatham Book.

The Manson Campbell Co. Ltd.

YOU CAN'T AFFORD

to buy poultry fencing without investigating THE PAGE. It is made of larger, stronger coiled spring wire, heavily galvanized, with bottom spaces only 1 1/2 inches, requires fewer posts, no boards, looks better and lasts much longer.

PAGE WOVEN WIRE FENCE CO.
Box 5855 Adrian, Mich.

what age? What should be done with the old fowls? I am referring to the best strain of S. C. White Leghorns.

After mating season is over should the male be separated from the flock? And do breeders who have fine strain do this when they sell eggs for market purposes to protect their best eggs at market prices? I want to get a good fowl for market and table use as well as fair egg producers. Are the White Leghorns at all adapted for the purpose? If not, could you suggest a breed that is?

Ashland, Ore.

H. J. E.

ANSWER:—The question of when a male bird has passed the period of his usefulness depends altogether upon the bird. We have known male birds to be strong and vigorous in their fifth year; others that were of no use the second year. Questions of this character must be decided by the breeder. A hen, if she is a good specimen, is never too old to be used as a breeder, providing she is healthy and vigorous. If the object is egg production, the females should not be kept longer than three years. Statistics prove that hens lay more eggs during the first two years than after that period, and the old hens should be disposed of in whatever way will be the most profitable, either for breeders or fattened and sold to market. Male birds should not be allowed to run with hens after the breeding season is over.

Any of the American classes, such as Rocks, Wyandottes, etc., are well adapted for your purpose. The Langshans, Brahmas and Cochins are all grand, good breeds, and you no doubt could make a success with any one of them, but we always leave the choosing of the variety to the one who has to take care of them.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—In Questions and Answers will you kindly answer the following question?

I wish to send my cockerels to the ranch for the fall and winter, to run with a mixed flock of hens. If I mate such blooded cockerels with my blooded hens will the eggs hatch blooded chickens?

Mrs. E. A. E.

ANSWER:—Yes. Running with the mixed flock will not affect the cockerels.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you kindly answer the following questions through the AMERICAN POULTRY JOURNAL:

1st—My Barred Rock hens and pullets seem a little droopy; eat hearty. Some seem to have difficulty in swallowing. On picking them up I find them to have no weight about them at all. I seldom find one with anything in its crop.

2nd—What is the cause of hens and pullets eating dirt? Have had several to eat dirt until their crops would almost overbalance them. Were on open range and had plenty of good feed and green grazing.

3rd—I lost a fine Slate Gobbler affected as follows: Mouth filled with stringy froth. Could hardly swallow. Droppings healthy on first day; second day droppings thin, watery and green; third day droppings thin, green, and the white part deep yellow. His throat was still filled with phlegm and he could not swallow and seemed very weak and soon died.

Mrs. J. T. G.

Corsicana, Texas.

ANSWER:—1st—Lice is probably the main cause of the trouble with your fowls.

A. H. ASCHE & SONS, Princeton, Ill.

EGGS FOR HATCHING

from prize winning W. P. Rocks, Pekin Ducks, S. S. Bantams and White Guineas. I also have Peafowls for sale. I have mated two yards of White Rocks this year. My second prize cockerel at Louisville, 1905, is at the head of one, and first prize cock the other. Write for prices. Satisfaction guaranteed.

T. R. McDONALD

R. R. 1, Winchester, Ky.

2nd—We have never had a case of this kind brought to our attention before, therefore we are unable to answer.

3rd—The symptoms would indicate congestion of the lungs, complicated with a disarrangement of the liver. The treatment for this disease must consist entirely of measures for its prevention, since the course of the disease, when once developed, is exceedingly rapid and fatal.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your next JOURNAL:

1. Does gasoline soil the plumage or take the color out?

2. How is the best way to ventilate a small coop about 6x4 feet?

3. What color of bird stands the cold best, between white and black? C. R.

Canton, Ohio.

ANSWER:—1st. Gasoline has a tendency to make the plumage hard and brittle and very easily broken, and we would not advocate its use on the plumage. 2d. Wherever possible the ventilation should be made through the roof, and the ventilators so arranged that there will be no direct draft on the fowls. 3d. We don't believe that color has anything to do with it.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—1st—If I set S. C. White Leghorns this spring could I breed with safety from this lot next year? If not should I get settings from different firms of this strain and by keeping them separate could I use the cock from one and hens from the other?

2nd—In getting eggs for White Leghorn strain would it do to get some of S. C. White Leghorns and some of R. C. White Leghorns and mix them, or should

I hold to the one strain for eggs to sell for settings? Please tell me how I may best begin.

3rd—If it is not well to mate young pullets too soon, should the cockrels be separate from these, and if so how long? Ashland, Oregon.

H. J. E.

ANSWER:—1st—If the party from whom you secured the eggs has line-bred stock, would be better not to mix the strains.

WHITE PLYMOUTH ROCK.

First cock at Boston, 1905. Bred and exhibited by Chapman & McQuillande, West Hartford, Conn.

2nd—It would be a great mistake to the single comb and rose comb varieties, as by so doing you spoil both and would have nothing but a lot of mongrels as the result.

3rd—The cockerels should be separated from the pullets as soon as the sex can be determined, and kept separated until the mating period.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you kindly let me know through your questions and answers column of your next issue of AMERICAN POULTRY JOURNAL, how many females to each turkey tom for good results, and also if it will be all right to mate turkey hens with their sire, last year being his first year with the flock.

G. M.

Melvin, Minn.

ANSWER:—Twelve females to one male is considered about the right proportion. By mating the hens with their sire you will be taking the first step in line-breeding, and this is what a great many of our most successful fanciers are advocating nowadays.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I have a very valuable cockrel that I sent to a show and when he returned I noticed he had a watery discharge from his eye and nostrils. I began doctoring him at once for roup, by applying sweet oil and alcohol to the parts, and seem to have got the disease very well under control. But it seems to have settled under one of his eyes and leaves a bunch about the size of a lead pencil and prevents him opening the eye entirely.

I have lanced this bunch but it contains no matter, and have been applying Tincture of Iron for sometime but it seems to do no good. He eats well and seems to be in very good health otherwise. Do you know of anything I could do for it, and do you think he would be all right to breed to?

R. D. C.

Storm Lake, Iowa.

ANSWER:—Bathe the affected part with warm witchhazel three times a day. If this does not have the desired effect, paint the swelling with tincture of iodine

and What It Will Do

twice a day. We don't believe it would be safe to use him as a breeder this season.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following questions in your next issue:

1st.—Have a hen that coughs and has a rattling in the throat; sometimes as if choking; is there any remedy for this, and is it catching?

2nd.—Have one hen that seems weak in the legs; cannot eat standing up; what causes this, and can it be cured? She seems healthy otherwise.

Turtle River, Minn. F. A. T.

ANSWER: 1st.—This is bronchitis. Give ten drops of spirits of turpentine in a teaspoonful of castor oil, and repeat this dose after five or six hours. This is not contagious.

2nd.—Rheumatism. Give Epsom salts, 20 to 30 grains. The following day add 30 to 40 grains of bicarbonate of soda (baking soda) to the quart of drinking water and give 2 or 3 grains of salicylic acid twice a day.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer in your May issue of the JOURNAL the following:

1st.—Is caponizing very common among market poultrymen and do you consider it practical?

2nd.—In your March issue there are two statements which appear to conflict and as they are in regard to a matter which I wish to know about I will ask you to kindly explain them. They are as follows: On page 224 in the article entitled "Some Work for March" the author says, "Select the best cockerel and mate them with the two hens. Do not give the cockerel any of the pullets. The mating of sister and brother is all wrong. In such a mating we have no fountain head, etc." Then on page 288 in answering the question of T. J. H., of Belleville, Ill., you say "It will be all right to mate these cockerels and pullets."

Please do not understand me to be trying to take you to task for the apparently conflicting statements. I simply ask for information.
R. C. C.

Bellevue, Wash.

ANSWER: 1st.—Caponizing in this country is not very common, especially in the western part. It is no doubt practical.

2nd.—In our answer to T. J. H. we inclined to the belief that these were not brothers and sisters, as he had procured the eggs from another party. If he had hatched these fowls from eggs out of a pen of his own mating and knew just the relation of each to the other we would not have advocated the mating of them in that manner.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer following questions in your paper:

1st.—Will coffee grounds do the chickens any harm if they eat them? 2nd.—How often should you add the Douglas mixture to the drinking water? 3rd.—Is sweet corn as good as other corn for chicken feed? 4th.—Which is the most popular, the Partridge Wyandotte, the Buff Wyandotte, or the Columbian Wyandotte?
W. K. S.

Lansdale, Pa.

ANSWER: 1st.—No. 2nd.—Two or three times a week. 3rd.—No. 4th.—We are unable to say.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I bought this spring 100 White Wyandotte eggs, represented to be of a superior strain. They hatched nicely but quite a number have single combs. Should pure bred fowls of this breed show a percentage of single combed chicks? I bought a bag of beef meal and my hens won't eat it. I use only a pint in eight quarts of mash, but they object. It has a putrid smell; something like Limberger cheese, and I don't blame the hens a bit. Should the beef meal have such a smell?
C. D. F.

Keyser, N. C.

ANSWER: Single comb chicks make

their appearance in almost every flock of White Wyandottes in the country and there seems to be no way of avoiding it. Beef meal has a peculiar odor about it, but should not smell like Limberger cheese, and most fowls will eat beef meal very greedily.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following questions in your "Question and Answer Department:" I would like to know how to make a good liquid louse killer that would not hurt the feathers on white fowls.

2nd.—I had some little chickens just about a week old when two of them died. I put them out in the sun for a little while and in a few minutes went out and found two stupid. When they were dying a white substance came out of their mouth. I do not know whether I fed them too much at first or not. J. C.

Port Dover.

ANSWER: 1st.—Into one gallon of kerosene or coal oil dissolve one pound of naphthalene flakes or moth balls and add six ounces of carbolic acid. 2nd.—It is impossible for us to say what the trouble was.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer the following question: I have just had an experience in raising chickens that I never had before. While watching a 2-weeks-old litter of brooder White Wyandottes I suddenly saw one of the largest fall over on his back, and both of his eyes popped out of his head. In a few seconds he was dead. What was the matter? W. J. S.

Borodino, N. Y.

Will some of our readers please answer this.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following questions in "Question and Answer Department:"

I have a Plymouth Rock hen which has an enlargement on the right side of her head just above the eye, it is as large as an eye and very red.

The outside is soft but it seems to have a hard lump inside; it hangs over her right eye so she cannot see.

What is the remedy for the removal of this lump, and what is the cause? J. H.

ANSWER: Read our article on Roup in the March issue, page 236.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I have a hen that has a kind of knot on her beak that grew until it was about 1 inch long and resembling a horn in shape. It seemed to be brittle and so I took my knife and whittled most of it off, when I found there was a sore next to the beak.

This sore had a kind of matterly appearance. Give cause and cure.

St. James, Ill.

A. E. S.

ANSWER: This is tuberculosis. There is no cure for it, and the bird should be killed at once and the carcass burned, to avoid contagion.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following, in your next issue, if possible:

Some time ago I purchased a pen of White Wyandottes from a noted dealer of same, and paid a fair price for them. I notice that after hatching a few of the chicks have a dark caste on the back.

Is this proper? They have never been allowed to run with other chickens.

Elizabeth, W. Va.

E. W.

ANSWER: Would rather see them with a dark shade on the back than with a cream color. These chicks will probably feather out snow white.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your next issue what a good food would be to feed my hens to make them lay. We have just moved onto a farm and the chickens have free range.

D. M. B.

St. James, Mo.

ANSWER: Plenty of good clean wheat and oats.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your Question and Answer columns these questions:

1st.—What is the general color of a Black Langshan chick when first hatched?

2nd.—What is the standard weight of Black Langshan cock, cockerel, hen and pullet?

R. E. B.

Sioux Falls, S. D.

ANSWER: 1st.—White, black and gray. 2nd.—Cock, 10 lbs; hen, 7 lbs; cockerel, 8 lbs; pullet, 6 lbs.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I would like to know all the standard varieties and all other kinds of chickens, ducks, geese, turkeys, games, bantams, game bantams, dogs, pigeons, squirrels, and guineas. Please put it in the question and answer column.

E. R.

Sterling, Kans.

ANSWER: Procure a copy of the American Standard of Perfection. Price \$1.50. We are now booking orders for new revised edition.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you kindly answer the following questions:

1st.—What is the best feed for young chicks? 2nd.—What is best to do with a brooder that is wet and damp inside. 3rd.—What is the best feed for turkeys that are laying and for little turkeys? 4th.—Give me a good description of Buff and Plymouth Rock. What should I do to get my Buff P. Rocks on show and what would it cost to send two birds to a poultry show?

Mrs. M. W.

Forest City, Iowa.

ANSWER: 1st.—Any of the chicks

feeds advertised in our columns. 2nd.—Improve the ventilation. 3rd.—Any of the prepared feeds advertised for that purpose. Correspond with some of the supply houses and get their prices and other information. Whole corn is a good feed for the old turkeys. 4th.—The American Standard of Perfection will give you the correct information about Buff P. Rocks. Price \$1.50. We are now booking orders for the new edition. It would take too much space to tell here how and what to do with birds intended for show. We publish articles

A GOOD OLD HEN.

About one month ago a man came into my store with a bunch of hens for sale. He had brought them about ten miles. I purchased his hens and turned them in a lot. One old white hen spread her wings and commenced clucking. I saw she was a sitter. I picked her up, took her in an old room, made her a good warm nest, put thirteen black breasted red game eggs under her. Today she is stepping around, the proud mother of eleven fine little brown and

First Rose Comb Brown Leghorn Cockerel, Herald Square, New York; Bred and Owned by W. W. Kulp, Pottstown, Pa. Mr. Kulp Won Four Firsts and Three Thirds at This Show in Largest and Finest Classes to Date, November, 1904.

on this subject from time to time and will give all this information before the show season opens.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Answer through your JOURNAL where they are blasting with giant powder can a man do any good with incubators?

2nd.—Are there any poultry farms in Colorado?

3rd.—Are there any poultry journals or papers printed in Colorado, if so, what is the name of them? J. J. D.

ANSWER: 1st.—No. 2nd.—Yes. 3rd.—Western Poultry World, Denver, Colo.

white striped game chicks. She cost me 25 cents. I value her at \$1.00.

Kehoe, Ky.

ORVILLE D. CHINN.

TONIC FOR THE HEN.

When we know that exercise is a hen's best tonic then why not keep her scratching? An active hen is seldom sick. She lays better, and her eggs are more fertile. We feed scratching food in the morning and mash in the afternoon, always remembering to keep charcoal grit and shell in the pen.

Mrs. J. H. OREBAUGH.

Batavia, Ohio.

BUFF PLYMOUTH ROCKS.

Fifth Prize Pen Buff Plymouth Rocks at the World's Fair, St. Louis. Bred and Owned by S. D. Lapham, Proprietor Dearborn Poultry Yards, Dearborn, Mich.

INFORM THE BEGINNERS.

The average beginner in the poultry business attends the poultry shows and seeing the winners thinks he or she would like some just like them. So he writes to several breeders of his chosen variety for prices which are duly received and the order placed. When the fowls arrive there is apt to be disappointment as too much is often expected considering the

price paid. The poultry press should take this subject up and explain value of stock.

Springfield, Ill.

J. E. LELAND.

DON'T CROWD.

One of the simplest and easiest ways to save work is to give the stock, young and old, plenty of room. Ninety per cent of all broods and flocks need cull-

ing. Cut out the deadwood and the good stuff will have a better chance. Crowded stock may pay a profit, but the product and profit would both be increased if they were not crowded.

RAISING DUCKS.

For a person suitably located there are no fowls more interesting or profitable to raise than ducks. They are such hearty eaters, and grow so rapidly that it is a pleasure to feed them, and watch them grow. Then the nice duck feathers that you get once a month, if you pick them, are so small item.

If you have a yard or pasture fenced so that you can raise ducks and not let them go everywhere keep ducks by all means. If you have to let them have free range you need a good stock of patience. Ducks carry so much mud on their bills that you can not keep clean water for chickens to drink where ducks can get at it. Ducks bother a garden worse than chickens. They eat vegetables greedily and they all go around together and tramp down things. I can plant a big garden and raise enough vegetables for our family, and all the chickens will eat, but I never could do that way with ducks in the garden.

If you throw any slop out at your back door, and have ducks around, they will linger there; and make it so filthy that you will wish you had never seen a duck. I never allow anyone to throw water around my doors, and that does not bother me.

Duck eggs require twenty-eight days to hatch. We usually set them under hens as it is seldom that a duck will set. Hens make rather better mothers for the young ducks than mother duck. Mother duck chases around so much, and tires the little things out. While the duck eggs are incubating it is well to dip them in warm water once a week for the first three weeks. The last week wet them every day. The day they ought to hatch, if some of them pip the shell and then do not get out for half a day break the shell a little. If the skin under the shell bleeds put the egg back in the nest, but if it does not bleed, break it some more, and pull the little duck's head out. It is surprising how soon they get out of the shell after having their heads pulled out. When they are all hatched it is best to put the hen and the little ducks in a box in a warm place where they can not get out for a couple of days. They do not need feed for the first twenty-four hours. Then give them bread made of corn meal and bran, hard boiled egg or clabber cheese, and water to drink. Be sure to always keep grit before them. Feed and water them every three or four hours. They must have water every time they are fed, and while they are small it is better to give them water in such a small dish that they can not possibly get their bodies wet. A duck is very delicate for the first week and ought not to be out in a rain till after it is three weeks old.

If anything is softer or more lovable than a little duck I would like to see it. It is best to be very careful to teach the ducklings to eat at first and let them get acquainted with the hen before they have a chance to run off with any other ducks. They do not seem to understand a hen at first, and if they are turned loose before they become acquainted with the hen they will not go with the hen, but will run off with some older ducks and you can not feed them as often as they need it and they will not grow as they ought to. Some people set a hen with hen eggs a week after they set duck eggs, and give a hen the ducks and one or two chickens. The chicken or chickens will run with the hen and

the ducklings will not desert a hen if there is a chick among them.

Ducklings can be successfully raised in brooders. A pond is not necessary for Pekin Ducks. Just so they have plenty of water to drink, and plenty to eat they will grow well. A pond or creek is apt to contain turtle or something that will kill ducks.

The duck does not have the love for home that the chicken has; and if you live near a creek the ducks are likely to follow the creek off and never come back.

Ducks make so many feathers, and grow so rapidly, that it is very important that they have animal food in some form. The most convenient way is to get animal meal and mix some with bran for one feed each day.

I have read that ducks would not eat corn, but mine eat it and it is all I give them for their supper.

It is fun to watch ducks run around in the early morning and late evening after insects. They ought not to be shut up nights after they are three weeks old.

\$35,000 A DAY FOR EGGS.

**Petaluma, Cal., with 6,000 Population,
Greatest Chicken Town in
the World.**

Petaluma, forty-five miles north of San Francisco, is the world's greatest chicken raising town. Petaluma has a population of about 6,000, yet from a hen's point of view it is the metropolis of the world; Petaluma is the center of a poultry raising district in which there are almost 2,000,000 chickens.

Thirty-five thousand dollars a day is what the world pays the town in hard cash for its eggs and poultry products.

Poultry raising is the chief industry, and if all the hens in the little city and its environs were to form one composite hen, this gigantic fowl would weigh more than 325 tons. Almost every one who has an acre or two of land raises chickens on an extensive scale.

The city supplies more than one-half of the poultry and eggs used in California, and sends a great quantity of eggs and fowl to the east, as well as to Hawaii and the Philippines.

The largest chicken ranch in the world is located at Petaluma. This ranch has upon its premises 18,000 laying hens, besides thousands of young chickens in the brooders and brooder houses. It takes an enormous quantity of feed to keep these ranches supplied. Some of the poultrymen buy feed in quantities up to 2,000 sacks at a single purchase.

It is estimated conservatively, that each hen yields an annual net income of 75 cents. Of course, in exceptional seasons, the average will equal or exceed one dollar.

The biggest poultry rancher sells the stray feathers, the empty egg shells from the incubators and the guano, the sale from all these making an appreciable reduction in the running expenses. The egg shells alone are worth \$1.60 a bushel.

A statement concerning the production for 1904 has just been made by the California promotion committee of San Francisco. It shows that during 1904 Petaluma shipped to San Francisco alone 3,483,321 dozen eggs, valued at \$913,075.44. This does not include the eggs shipped direct by boat to other points, and thence to all parts of the world, nor does it include the enormous sum received from the hundreds of incubator ranches which feed chicks just for the market. The gain in 1904 over 1903 in the amount received for Petaluma eggs in San Francisco alone was \$68,471.78.

Despite the enormous production of poultry produce in Petaluma it does not come near to supplying the demand. California imported over 21,000,000

pounds of poultry products last year.—*Exchange.*

Editor AMERICAN POULTRY JOURNAL:

At this season of the year it is a foregone conclusion that a great many farmers who have been more or less successful with their flock of poultry are looking through the poultry press with a view to purchasing stock or eggs to improve their stock. It may be wise to speak a word of caution regarding making a wise selection. The average farmer is not a fancier in the true sense of the word. I believe that the practical side of the question appeals to him much more strongly than the fancy. He wants fall and winter eggs. To make it a paying

BARRED P. ROCK.

First cock at Charlotte, N. C., 1905.
Owned by C. C. Randleman, Ramseur, N. C.

proposition he must have them, yet a great many are led to believe that the wise course is to buy from a thorough fancier at a long price. The fancier does not as a rule breed for winter egg production, he does not require it in the best interests of his business, many times he takes measures to prevent it, his success in the show room does not depend on heavy layers, a laying hen does not make as good a show bird as one that is not laying. That few will dispute and as the shows come during fall and winter many fanciers do what they can to prevent their best birds from laying early. I believe and to my mind it is a pretty well

established fact that the propensity to lay eggs is something that can be bred from one generation to another by careful selection of the layers and by mating a fine bird of a strain that is not acknowledged to be heavy layers one can positively injure the prospect of winter eggs. Not that I would cry down the fancy or that I believe the two can not be in a measure combined, but I do believe and believe strongly that in many cases they are not combined and never will be. Our best breeders of fancy fowl have little use for winter eggs. Their trade is in the spring and then is when eggs are wanted for setting. Most poultrymen agree that better results are likely when setting eggs from hens that have not laid all winter. On the other hand the farmer wants a bird from a good laying strain, strong, hardy and up to a standard weight. Let him look for that bird among poultrymen who make it a specialty and if he is willing to learn, interested and intelligent he can if he chooses improve his flock wonderfully by making proper matings with what he will raise. Introducing a valuable male does not justify advertising fancy eggs, it takes years of careful breeding to produce fancy stock even under the most favorable conditions and I believe that if the average farmer would think less of the show room and more of the egg basket he would stand a better chance of having the balance on the right side of the ledger.

FRANCIS E. PEARSON.
New Castle, Me.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—In attempting to "make a few remarks and also ask a few questions" in reply to a recent article captioned "The care of the Fowl," Alvin H. Dudley has lamentably failed to hit the mark at which he aimed—owing no doubt to short-sightedness or the fact that his cranium was overcrowded with theories and he became confused when the critical time came. However this may be we will endeavor to enlighten our eastern contemporary to the fact that it has been our aim to keep our henery in a modern and sanitary condition, and at the same time provide the food in a manner which would as nearly as possible approach the conditions were the fowls left to roam at large, and to prove that my so-called "Fussiness" amply repaid the small amount of labor involved, I gathered 912 eggs from November 1st to February 1st from a pen of only fifteen hens, and out of 100

GREYSTONE POULTRY FARM

YONKERS, N. Y.

eggs placed in an incubator 91 per cent of them hatched, all of which should convince Mr. Dudley that his ideas of "pampering" stock is as false as a report of a Russian victory.

By a very simple arithmetical calculation our esteemed friend will find that I only claimed to feed five times a day and only during the extreme cold weather was their drinking water changed so often in order to keep it in a sanitary and healthful condition.

If Mr. Dudley considers the plan of keeping fowls or any other of our domestic animals comfortable, "fussiness," we would advise him to diligently study the many pages devoted to "fussiness" in the book entitled "Black Beauty," and we are sure that even "he" may see that what some may call a pleasure, others may term it "fussiness."

Mr. Dudley also says that "a person who has ambition is all right, but misdirected ambition or jumping up and down in the same place never got a person ahead much." Judging from the general tone of this gentleman's letter we are led to believe that he has tried the jumping plan and now sees where he has been losing energy and at the same time failed to reach the goal of his ambition—if any—even though he does

P. Harold Hayes, Buffalo, N. Y.

faithfully read five poultry journals each month. It has been well and truly said that it is the busy and ambitious man who finds time for everything; and the easy-going man is always too busy to find anything to do.

Now, in closing, we will say that theory is a mighty nice thing to have at times, but to our idea it is the man (or woman) with the practical experience and the demonstrative ability to prove their ideas better than theoretical views are the ones who will not fail to make a success in any undertaking in which they may engage, even though it may be that of "pampering" fowls. "Experience is the best teacher," and we have found that our plan has fully met with, yes even exceeded, our expectations and we shall endeavor to carry on our work along the lines already described, to the contrary notwithstanding.

Yours for healthy, hardy stock that can not fail to prove the beneficial results attained by careful, modern ideas in poultry raising.

DR. O. G. CRAWSHAW.

Dawson, Pa.

REARING BROODER CHICKS.

Rearing brooder chicks is a great deal like having boils. Everybody we meet has "a cure which never fails."

Experience and observation has proven to me that we drift too far away from nature.

Who bakes johnny-cake or boils eggs or soaks bread in milk or even makes a mash for young prairie chickens? Barring flood and hawks everyone will reach maturity; perfect specimens of their kind.

Following is the method which I have used for the last two years:

I put my chicks, as soon as they are dry, into a brooder which has been previously heated to a temperature about five degrees below that required by newly hatched chicks. (85 to 90 degrees.)

The floor of the hover chamber is covered with a piece of burlap and the outer or feeding room is covered an inch deep with oats chaff or chopped hay. In one corner of this apartment is a drinking fountain filled with pure water and in another is a box of coarse sand. (Just such grit as will not pass through a fly screen.)

The feed consists of a mixture of dry cracked grain in the following proportions:

Two parts wheat, 2 parts oats (rolled or cut), 1 part rice, 1 part corn and 1 part millet seed. This is thoroughly mixed with the litter from the start. On alternate days I throw in a small bunch of lettuce or onion tops and a beef bone with some lean meat on it.

I find that the chicks will not eat until they are 24 to 40 hours old; but when nature gets them ready for food they begin scratching it out of the litter.

Don't worry about over feeding. A chicken, young or old, won't work after he eats his fill and they can't get any more out of the litter unless they do work.

Last year I raised 90 per cent of all chicks fed in this way and so far this year have not lost a chick.

Now, just a word about brooders. A brooder must be so arranged that each chick can find a temperature suitable to its own pleasure.

This is my cure, try it.

SATISFACTION

Isn't this enough for any man to expect?

Matthews, Ind., Dec. 11, 1904.

Dinsmore & Co.

Dear Sirs:—The one hundred White Wyandotte eggs I bought of you proved the best investment I ever made. I hatched fifty-three nice chicks. I have just returned from Marion poultry show, where I won 1st, 2d, 3d cockerels, 3d pullet, 1st and 2d pens, seventeen specials and \$10 silver cup for best display of any one variety. If you will sell me eggs the same price I will take 500 or 1000 next spring. Wishing you success I am

Yours truly, R. B. LITTLE.

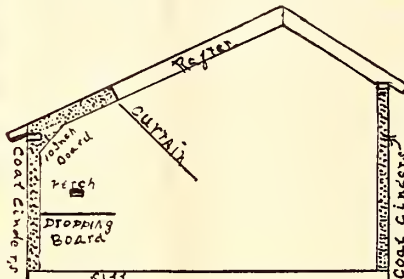

We have ten grand pens mated for best results, and we guarantee our eggs to be 75 per cent fertile. \$2 per 15, \$10 per 100.

Hillcrest Poultry Yards

Dinsmore & Co., Props. Kramer, Ind

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I send you a plan of a poultry house—walls filled with coal cinders. The drawing will show the manner of packing outside walls and ceiling over roosting room; the ten inch board set at an angle permits the cinders to slide down and keep the north wall and ceiling firmly packed. More cinders can be added when necessary and rats, mice and mites will not live in cinders as they

End View

do in hay or sawdust packing. I have one poultry house built in 1900 packed with cinders, one 72 feet long back plastered, one 50 feet long, built 1903, packed with cinders; the buildings packed are better and cheaper than the one back plastered. Last winter with outside temperature from 10 to 30 below zero not one of my S. C. White Leghorns had a comb frozen. One pen of 30 pullets laid 1,338 eggs from January 1 to April 1, 1904, an average of 14.66 eggs per day.

W. C. COFFMAN.

Marinette, Wis.

A GOOD EGG PRESERVER.

There is no other agency that can arbitrarily add so much to egg profits as a good egg preserver. Of course eggs are cheap when they are plenty. It is simply cause and effect; they are cheap because they are plenty. If they can be kept for a few months when eggs are scarce, and sold for fresh, the price can easily be doubled. No wonder poultry raisers are all looking for the faultless egg preserver.

The faultless egg preserver may not have come yet, but a very satisfactory one is the water glass preserver advertised to our readers by Rolla A. Willett, of Anderson, Indiana. It is cheap, it keeps eggs actually fresh and it enables you to put them on the market with a fresh-laid appearance. The appearance counts for much. It is almost as important, so far as price is concerned, as freshness itself. The Willett preserver is a pure water glass. In this it has the unqualified approval of the U. S. Government through its Experiment Stations, as an egg preserver. Another point in favor of the Willett preserver is that it does not affect the flavor of the eggs. If you are in need of anything of the kind, you are likely to find the Willett preserver the most satisfactory of anything of the kind to be had.

A rake is mighty useful as a garden tool, but it makes a poor curry-comb for your horse. It's a worse mistake, though, using a common soap to shave with. Even the best laundry or toilet soap, when used for shaving, will do for your skin just what a rake would do for your horse's hide. WILLIAMS' SHAVING SOAPS are made especially for shaving, by people who have been at it since 1840; and they have learned a good many things. Take advantage of their offer made elsewhere in this paper and bear the fruits of their 65 years' study.

We believe it pays to investigate everything. If you have a building that needs roofing, write to F. W. Bird & Son, of East Walpole, Mass., and see what they have to say about Paroid. It won't cost you anything, and in justice to yourself you ought to hear every side of the story.

Good health for calves

Pratts Calf Tonic.

Made by Pratt Food Co., Phila. Over 30 years old.

A Living Monument.

If we were to assemble all those who have been cured of heart disease by Dr. Miles' Heart Cure, and who would to-day be in their graves had not Dr. Miles' been successful in perfecting this wonderful heart specific, they would populate a large city.

What a remarkable record—a breathing, thinking, moving monument, composed of human lives,—that for which every other earthly possession is sacrificed.

The Miles Medical Co. receive thousands of letters from these people like the following:

"I feel indebted to the Dr. Miles' Heart Cure for my life. I desire to call the attention of others suffering as I did to this remarkable remedy for the heart. For a long time I had suffered from shortness of breath after any little exertion, palpitation of the heart; and at times terrible pain in the region of the heart, so serious that I feared that I would some time drop dead upon the street. One day I read one of your circulars, and immediately went to my druggist and purchased two bottles of the Heart Cure, and took it according to directions, with the result that I am entirely cured. Since then I never miss an opportunity to recommend this remedy to my friends who have heart trouble; in fact I am a traveling advertisement, for I am widely known in this locality."

J. H. BOWMAN,

Manager of Lebanon Democrat, Nashville, Tenn.

Dr. Miles' Heart Cure is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails he will refund your money.

To Chas. A. Cyphers, to his agents, and to all dealers in, and users of the "Model Incubators," and the Cyphers Incubator Company's Thermostat, as manufactured by Chas. A. Cyphers, Buffalo, N. Y.

TAKE NOTICE, That suit is pending against the said Chas. A. Cyphers, Buffalo, N. Y., for infringement of patent No. 530,163, dated December, 4, 1894, and owned by this company. During the time that the said Cyphers was an officer of this company he laid the utmost stress in all the company's literature upon the fact that the porous-diaphragm incubators manufactured by it, were made under the said patent; and, by his instructions, all such incubators were marked as manufactured under the said patent.

Under the law each maker, each seller, and each user of an infringing device is liable to the owner of a Patent for all profits made by reason of an infringement thereof, also for any additional damages caused by reason of such infringement, and also for the costs of the suit.

TAKE NOTICE, That, as soon as this company obtains its decision against the said Cyphers, it will proceed against all his agents and against all dealers in the so-called "Model" incubator, for the collection of the profits, damages and costs aforesaid, and will hold them directly responsible and will not recognize any bond that may have been given by the said Cyphers to such agents, dealers or users.

TAKE FURTHER NOTICE, That the Thermostat used in the said "Model" incubator infringes the patent to John R. Roberts No. 490,926, granted January 31, 1893, and owned by this company.

ALSO TAKE NOTICE, That this company asserts its ownership of the invention of the particular style of thermostat now used in the said "Model" incubator, and that proceedings are pending to protect the said invention; and this company will proceed to collect from all such agents, all dealers in and all users of the said Thermostat, such profits, damages and costs, as may be awarded on account of infringement of this company's patent or patents.

TWO SAMPLE AFFIDAVITS.

There are different ways to seek business. The following misstatements and affidavits disclose one way:—

MISSTATEMENT NUMBER ONE:

"Crystal Springs Duck Farm, Oil City, Pa., where 81 Model Incubators are in use."—Chas. A. Cyphers in September 1904, issue of Farm-Poultry, published at Boston, Mass.

"The Model is so good that the following large plants have adopted it, discarding other machines: Crystal Springs Duck Farm, Oil City, Pa., formerly 56 Cyphers, now 81 Models"—Chas. A. Cyphers in March 1st, 1905 advertisements in the leading poultry journals.

AFFIDAVIT NUMBER ONE:

State of Pennsylvania, }
County of Venango, }
City of Oil City, }

C. Fred Roberts, of Churchville, County of Monroe, State of New York, and Charles E. Adair, of Columbus, County of Franklin, State of Ohio, being duly sworn state that on the 12th day of March, 1905, they personally visited the duck farm of B. F. Brundred at Oil City in the State of Pennsylvania, known as the Crystal Springs Duck Farm, and received permission to go over and inspect said farm; that Patrick McEvoy, the superintendent of said farm personally escorted deponents through the incubator cellar on said farm, and that deponents then and there saw numerous incubators in operation, the greater number of which were those manufactured and sold by the Cyphers Incubator Company, and that deponents were informed by said Patrick McEvoy and they verily believe to be true, that there were (43) forty-three of said incubators so manufactured and sold by said Cyphers Incubator Company in said cellar, and only (28) twenty-eight of some other manufacturer.

C. Fred Roberts, } (Seal.)
Chas. E. Adair, }

Subscribed and sworn to before me this 16th day of March, 1905.
Clinton M. Hershey, Notary Public.

MISSTATEMENT NUMBER TWO:

"The Model is so good that the following large plants have adopted it, discarding other machines: W. H. McCormick & Son, Yardley, Pa., formerly 67 Cyphers, now 67 Models."—Chas. A. Cyphers, in March 1st, 1905 advertisements in the leading poultry journals.

AFFIDAVIT NUMBER TWO:

State of Pennsylvania, }
County of Philadelphia, }
City of Philadelphia, }

C. Fred Roberts of Churchville, County of Monroe, State of New York, being duly sworn states that on the 5th day of April, 1905, he personally visited the duck farm of W. H. and John C. McCormick at Yardley, County of Bucks in the State of Pennsylvania; that one of the owners of said farm, Mr. W. H. McCormick, escorted deponent through the Incubator cellars of said farm; that deponent then and there saw in full operation numerous incubators which were manufactured and sold to the said W. H. and John C. McCormick by the Cyphers Incubator Company of Buffalo, New York; that deponent was informed (on said date, April 5th) by both W. H. and John C. McCormick that they had not decided to make a change in the incubators they were using, and that they had not disposed of any of the incubators purchased by them of the Cyphers Incubator Company, Buffalo, New York.

C. Fred Roberts, (Seal.)

Subscribed and Sworn to before me this 13th day of April, 1905.
Chas. P. Rooney, Notary Public.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 17 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

Prof. Henry says that success is only obtained by concentrating all efforts upon one line.

A two-years' course in Hog Raising: Teaching how to be successful.

How to secure the greatest profits.

How to get 17 lbs. of pork out of a bushel of corn and 19 lbs. from a bushel of wheat-fed hogs.

How to feed to double the growth and gain over usual methods: only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the subscription to this paper, the costly experience and gathered wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says "Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene" with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition the wonderfully suggestive picture in colors, "Uninvited Guests," suitable for framing, showing the pigs partaking of a meal uninvited.

This equips you for a successful hog business.

THE DEMING POWER SPRAYER.

Those of our readers who use or are intending to purchase power sprayers will be interested in the Gasoline Engine Spraying Machine manufactured by The Deming Company, Salem, Ohio. The Deming Company are old and well known manufacturers of all kinds of spraying devices. The power sprayer here reproduced is one of their later inventions. It meets admirably the requirements of those who must employ a power of some kind to spray their large trees and in their large field and orchard operations.

The difficulty heretofore encountered by manufacturers was to build a small yet

efficient gasoline engine which could be sold at a price orchardists could afford to pay. The Deming Company claims to have solved this problem.

The engine is light, simple and self contained. The cylinder is water cooled; the water tank being in base of outfit. The water circulation is ideal. It has a strong electric spark igniter and improved dry batteries. The pump is of a style already proven one of the most effective in the Deming line. The whole outfit can be conveniently mounted on a wagon bed or tank wagon. Any style or size of supply tank can be used. Any one interested in power sprayers will do well to send to the Deming Company for their catalog and full particulars about this machine.

A G-R-A-N-D R-E-C-O-R-D.

The following letter from the famous breeders of Wilber's Gem Strain of S. C. White Leghorns (with a record score of 95 points at 5 months of age) is right to the point, and coming from an authority so well known is an endorsement of very high character for Chamberlain's Perfect Feeds of various kinds. Thousands of other breeders constantly use and highly recommend these wonderful "Perfect" products.

Petros, Tenn., Jan. 23, 1905.

Mr. W. F. Chamberlain (The Perfect Chick Feed man), St. Louis, Mo.

Dear Sir: As quite large users we wish to inform you of the excellent results and values we have derived from your Perfect Feeds, finding them far above the average foods we have used.

Last season we reared nearly 3,000 of our Gem Strain S. C. White Leghorns on your Perfect Chick Feed, losing not over 6 per cent, this fact alone proving the high quality of your Feed. We are proud to say the parents of these chicks were fed during the entire past year with Chamberlain's Scratching Feed, Mash Egg Feed and Shredded Green Cut Clover, which is better than the best. We seldom lose a bird.

With best wishes for your future success, we remain, yours respectfully,

WILBER BROS.

The job of shingling the roof with its attendant dangers and difficulties has been wiped away by the introduction of such thoroughly good roofing as Paroid. Put on easily by any intelligent man, and shipped with nails, tins and Parine cement inside of each roll, the difficulties have all been provided for by the manufacturers.

A VALUABLE BOOK FREE.

We have received a copy of the Prussian Farmer's and Stockman's Handbook, printed and published by the Prussian Remedy Co., St. Paul, Minn. The book contains 128 large sized pages, well printed and illustrated, and our examination shows that it is filled with valuable information for the farmers and stockmen and their wives. It is indeed a cyclopedia which every stock owner should have in his household for reference and use. We have seldom seen so much useful information printed within so small a space. The book is well worth a dollar, but the publishers give it free to their patrons. Address Prussian Remedy Co., St. Paul, Minn.

A great many progressive poultrymen are beginning to realize the value of crushed charcoal as a conditioner for their stock. Those who have tried it are enthusiastic regarding the results which they have obtained. It is a good disinfectant. It cleanses the system, absorbs all impurities and makes the fowls robust and healthy; makes the poultry feel better, eat better and lay better. Many poultrymen use it not as a cure for ailments but as a preventive, as it absorbs all gases occurring from impure foods, overfeeding, etc., and corrects the digestive functions of the fowls naturally and easily when they have become deranged from any cause whatever.

Chemically pure crushed charcoal can be obtained in different sizes suitable for different poultry, the favorite size being coarse granulated for mature poultry, fine granulated for little chicks and pulverized to mix with mash, condition powders and soft foods. They take to it readily and consume large quantities, especially when guided by nature to seek a corrective for poor physical condition.

Probably the best known Poultry Charcoal sold today is Viger's Chemically Pure Crushed Charcoal, put up and sold by Viger's Coal & Wood Co., Detroit, Mich.

In a recent interview with a representative of this paper, Mr. Viger stated that the demand for crushed charcoal is twice as large this year as it was last. Poultrymen in every section of the country begin to appreciate more and more the value of keeping charcoal before their chickens. We advise all poultrymen to write to this company and get samples so that they can try it themselves.

FREE ROOFING SAMPLE.

By dropping a postal card to any of the following offices of the Barrett Manufacturing Co., they will send you a free Sample of the new Ready Roofing, AMATITE. This Roofing is mineral surfaced at the time of manufacture, and requires no coating of any kind. The manufacturers claim that anyone can put it down, and after it is once on the roof it will last for years without attention of any kind. Address the Barrett Manufacturing Company at New York, Chicago, Philadelphia, Cleveland, Cincinnati, St. Louis, Allegheny, Kansas City, New Orleans or Minneapolis.

PAIN AND PLEASURE.

The man who uses ordinary soap for shaving has his troubles and plenty of them. His razor pulls, the lather dries on his face, and when he has finished his face smart and stings and itches, and looks like part of a torchlight procession. Williams' Shaving Soap avoids all this. It makes a thick, creamy lather, which softens the beard, makes it easy for the razor, and leaves the face cool, smooth and comfortable. The J. B. Williams Co., of Glastonbury, Conn., whose announcement appears in another column, will send a free sample of Williams' Shaving Soap if you write to them.

THE UP-TO-DATE BICYCLE.

The 1905 model bicycles, with coaster-brakes and puncture-proof tires, would have been considered miracles of mechanical achievement only a few decades ago, and yet they can be bought today for only a fraction of the prices then prevailing. The Mead Cycle Company, of Chicago, are offering the finest of this year's models at from \$10 to \$24, and the models of 1903 and 1904 at from \$7 to \$12. Their factory clearing sale is attracting much attention among wheelmen, and their special catalogue, which they mail free, is worthy of careful study.

A NEW ROOFING OF MERIT.

We are always glad to call to our readers' attention any article in our Advertising Columns which contains so many good points as the new AMATITE Roofing. For anyone seeking an inexpensive roof that will give most excellent service, we believe AMATITE will more than meet their expectations. A free Sample and further information will be sent for the asking from the Barrett Manufacturing Co., at New York, Chicago, Philadelphia, Cleveland, Cincinnati, St. Louis, Allegheny, Kansas City, New Orleans or Minneapolis.

OCONOMOWOC, WIS.

The Oconomowoc, Wis., fanciers have formed a poultry association there, and will hold their first annual show December 10-16, 1905, and everything points to a big show. The fanciers there are all stirred up and there are already more than twelve different breeders, each taking up a different variety. R. H. Poston is president; C. S. Brent, of Brent & Eddy, vice president and show superintendent, and Dr. H. J. Larson, secretary.

F. W. Oweus, Richwood, Ohio, writes us that this spring has been an unusually early one and he has succeeded in hatching quite a good number of early chicks. He has all the eggs set he wants, hence is offering eggs at greatly reduced prices for the balance of the season and guarantees them to be from the same pens as he hatched his early chicks from. He breeds the two popular varieties, viz., Buff Wyandottes and Buff Ply. Rocks.

Elsewhere will be found the ad of A. R. Swett's Buff Rocks. He breeds nothing except Buff Rocks. He has been breeding for egg product as well as the fancy using trap nests, which have proved very satisfactory for the last five years, each year improving his stock of prize winners as well as the egg product. He has won several years at the poultry show at Elgin; this past season won the first prize pullet,

94; fourth pullet, 93½; second and fourth cockerel and second pen; Charles McClave judge. Each pullet in each pen, eight in all, are proving to be giving excellent satisfaction as layers, thus combining utility with the fancy. The first prize pullet has laid fifty-four eggs from January 1 to April 1. The total from January 1 to April 1 is 392. Two of the birds did not commence until February 7; three others on the 16th.

Ira C. Keller, the Wyandotte man of Prospect, Ohio, writes that his matings were never as fine as this year and is prepared to handle a large egg trade of Golden and White Wyandottes. He recently shipped a consignment of Golden and White Wyandottes to Australia, and another of Golden Wyandottes to New Zealand, and has another order for same for Australia to be shipped soon. This class of trade means very fine birds, as the distance is so far that it does not pay to pay charges on anything ordinary. Mr. Keller has sent many fine Wyandottes to these two countries during the last fifteen years.

Every month "White's Class," composed of the members of White's Class Advertising Co., of Chicago, have a monthly meeting. Frank B. White, president, has recently put in booklet form the address that he made January 23, 1905, on the "Relations of Employer and Employee; or Building Business and Making Men," which is full of splendid advice and good business principles. No doubt Mr. White will be glad to send those interested a copy of this.

Albert R. Swett, of Almore, Ill., reports the following record of egg laying of his Buff Plymouth Rocks. Under date of March 20th he says that the eight pullets he had at the poultry show at Elgin had laid 303 eggs since the first of January. The pullet that took the first prize laid 45 eggs. Two of the pullets did not commence laying until late in February. Mr. Swett has for three years kept record of the eggs laid, by means of a trap nest.

\$1.50

and What it Will Do

ORDER NOW

The New Standard of Perfection, which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of

American Poultry Journal

Help you get the New Standard cheaper

- 1.—Send us One New Subscription to the American Poultry Journal at its regular price of 50 cents a year and we will let you have **The New Standard for \$1** instead of \$1.50.

Mrs. Hill's W. Langshans

won more premiums at World's Fair, St. Louis, Mo., than all the other White Langshan breeders combined. This winning at the world's greatest poultry show entitles my birds to the title of "The World's Best." I can supply you with eggs from my best at \$3 per 15 straight.

Mrs. J. S. Hill Purdin, Mo.

By the Walter Hogan System you can pick the pullets that will begin laying earliest and lay the longest. That is a big thing. You can sort the hens into good, bad and indifferent That is bigger. You can choose the cocks that will produce the laying strains. That is the biggest thing of all. There is no expense in using this system after its first cost. It does not take expert training to apply it. You can test it 60 days and get your money back if not satisfied.

Proof and Particulars Free

The Walter Hogan Co., 17 N'tl Bank Bldg. Fergus Falls, Minn.

ECONOMY.

The word economy signifies more than saving. It also embraces the proper utilization of that which we use. Practical economy means not so much to spend little, as it means to spend wisely—so as to get value received, to get all there is in it. Anything that wastes things of value such as time, money, energy and strength is poor economy. This practical idea of economy is interwoven into every fiber of the manufacturing and selling departments of the Advance Fence Co., of 13 Old St., Peoria, Ill.

If you were rigging a ship it would be poor economy to cut the ropes into short pieces and then splice them. In building wire fence it is poor economy to cut the wire in short pieces. It wastes about one-half the strength. It exposes the ungallvanized cut ends to the weather. The continuous stay preserves all the strength of the wire and makes a perfectly smooth job. Why use heavy wire and then whittle it up? It is not practical.

Unnecessary and nonproductive labor is also bad economy. You don't need the assistance of a dealer to buy fence from the factory. The Advance Fence Co. will ship it direct to you, and save you the dealer's profits. That's practical. They have twenty-six good styles to choose from. This enables you to get a "perfect fit" for field, yard, garden and poultry pen.

They pay the freight. You know in advance just exactly what it will cost you delivered. When sending away for things, don't forget to ask, "Who pays the freight?" It's a large item.

Furthermore, they ship the fence on thirty days' trial. If you don't like it, send it back at their expense and get your money back. The Advance Fence Co. has advertised with us for a long time, and we know them to be a reliable, trustworthy concern.

The Emma P. Poultry Farm, of which S. E. Lane is superintendent, at Gurnee, Lake county, Ill., is sending out their annual circular, on request, regarding their White Wyandotte and S. C. White Leghorn mating for the egg business.

This farm consists of forty-five acres devoted to the above two varieties, and their claim of being the most modern equipped poultry plant in America today is well sustained by a glance at the illustrations in this circular. It is a place to delight the heart of any fancier. This plant is owned by David Beidler, a wealthy Chicago man, who hesitates at no reasonable expense upon making his plant as good as can be done with unlimited capital and intelligent management.

Their White Wyandottes are mated for standard size, correct shape and white plumage. Their winnings in three shows in 1904 and 1905 were as follows: White Wyandottes, Milwaukee, January, 1904, 1st pullet, 2nd hen; no males being shown. St. Louis Exposition, 1904, 2nd cockerel; at the Chicago show, January 23-28, 1905, 2nd and 4th cockerels, 2nd pullet and 2nd pen.

They recently added S. C. White Leghorns and have very large birds of this strain. They did not exhibit any of this variety, as the demand for the stock was very large, but all of the pens are mated up with birds both for the highest exhibition and utility. Their eggs are from their best pens; they have no poor pens on the farm.

G. E. Conkey & Co., of Cleveland, Ohio, are placing a new Cholera Cure on the market and are advertising same in this number.

Cholera is the plague of the poultry yard. It does its work so quickly that it is likely to make very serious trouble and loss before its seriousness is realized. It has taken years of experiment and investigation to create a remedy that will check and cure this terrible disease. This they claim they have done and they are so certain of its efficiency that they offer to refund the money paid for same if it fails. Like Conkey's Roup Cure, it is tasteless; is put in the drinking water and taken without the fowl's knowledge.

Descriptive of all poultry diseases is a new book just published by G. E. Conkey & Co. This is worth its weight in gold. Its price is 25 cents, but they will send it to you now for two 2-cent stamps. We ask our readers to send to them for it. It may save you many dollars.

The Edgar Poultry & Egg Farm Co., of Rochwood, Ohio, are offering eggs for hatching now from their pure bred White Plymouth Rocks, White Wyandottes and Single Comb White Leghorns, and announce a reduction in price of eggs.

MAGAZINES.

There is a most attractive outdoor air about the May number of *Scribner's Magazine*. It has a charming colored cover; a drawing, "Flowers of May," by Sarah S. Stilwell, reproduced in colors; a description of Salvini's Tuscan farm in a wild region of Italy; "The Awakening of the Trees," written and illustrated by Frank French; a glimpse of the Grand Canyon of the Colorado, by Benjamin Brooks, with a wonderful series of Elmendorf's pictures; "Breaking Trail," by Frank E. Schooner, giving an account of a winter trip in Canada, with the author's pictures reproduced in tint, and Edwin B. Child's description of the great marble quarries in Vermont, with a series of his own striking pictures. There are also outdoor poems—"To a Mountain Lake," by Martha G. D. Bianchi; "Amid the Orchards," by Mary Findlater; "When We Two Walked in Arcady," by Caroline Duer; and "The Desert," by Ingersoll Coudert, with decorations by Haskell.

A late discovery, of interest to the scientific world, is that of a new small white bear whose home is northwestern British Columbia. An account of the find has been prepared for the May Century by W. J. Holland, director of Carnegie Museum. Efforts are being made by William T. Hornaday, director of the Bronx Park Zoological Garden, New York, to secure living specimens of the animal.

With the uniform high charges for gas, the gas stove is ordinarily the most expensive piece of household machinery, and at the same time it is the one least understood by the average housekeeper. Writing in the May *Delicater* under the topic "Gas Stove and Refrigerator Knowledge," Isabel Gordon Curtis has some suggestions in this connection which rob the gas stove of some of its terrors of cost. Young housewives particularly will profit by reading the article, which is in the series "The Making of a Housewife." Other topics of domestic interest in the same number are "A Crown of Lamb," illustrated for Easter service; "Leftovers," also illustrated, and a fund of kitchen lore and receipts under the headings "A Nest of Eggs," "Novel Methods of Preparing Grapefruit," "New Fillings for Layer Cakes," and "Household Hints."

It is the fashion among the young girls of the leading families of our city to have their linen chests, irrespective of the dreams of matrimony. They acquire in the collection of the linen a useful knowledge of its character and cost, and by the time they are full-grown they possess many beautiful things. They learn also the value of their mothers' linen. The custom is encouraged by the mothers. It enlarges the possibilities of birthday and Christmas gifts.—*Good Housekeeping*.

"Have ye iver noticed how a crab does be walkin' backwards most av th' time? Well, accordin' to th' laws av nature, 't will only be a matter av time till they'll be gettin' heads on th' other ind to be seen' where they're goin'." 'T is that makes involution. * * * Nature is a wonderful thing whin ye come to study it.—*From Charles D. Stewart's "The Fugitive Blacksmith."*

H. P. RANKIN'S CATALOGUE.

It is gratifying to see that every year breeders are paying more and more attention to the catalogues that they put out. The catalogue of H. P. Rankin, of Hartington, Neb., is one of the latest that comes to our desk and is certainly one of the best. This describes, as Mr. Rankin puts it, "America's Big Four" or "Rankin's Royals," consisting of Barred, White and Buff Plymouth Rocks and White Wyandottes.

The catalogue is printed on splendid paper with beautiful half-tone portraits and illustrations, and the reading is concise and to the point: first describing Mr. Rankin and his business, describing his foundation stock and his methods of breeding, a complete list of his matings for 1905 of all his varieties, his prices for stock, egg guarantees, terms and references. It is a catalogue that every reader of AMERICAN POULTRY JOURNAL interested in poultry should send for.

Those of our readers who are looking for Buff Rock eggs should not overlook R. H. Robson, Urbana, Ohio, who has a good lot of Buff Rock eggs for sale from good stock that will make a good investment for any buyer.

RHODE ISLAND REDS.

The question has been frequently asked us, Why have you dropped other varieties of poultry and now breed Rhode Island Reds exclusively?

The reasons if all given fully would occupy three or four numbers of the AMERICAN POULTRY JOURNAL and leave no room for other reading matter nor for advertisements, without which latter we are afraid Mr. Bates and his efficient staff would not be inclined to long furnish us the excellent, instructive and entertaining reading matter to which we all look forward the first of each month.

The writer's experience in writing is limited, so we will have to beg the indulgence of the reader if this article does not come up to the literary merit of time-tried and true poultry writers.

Ten years ago we started in the poultry business on a small scale with a few Barred Rocks, then after a year or two added Golden Wyandottes, and next a pen of B. C. Bantams, and yet a year later added C. I. Games. We enjoyed heartily the pleasure and profit with these breeds and thought our happiness complete.

In the summer of 1899 we read a great many notices about the wonderful qualities of Rhode Island Reds, and after considerable correspondence and investigation we bought in November, 1899, from a prominent eastern breeder a male and nine female Rose Comb Rhode Island Reds.

Upon their arrival we found them in appearance all that had been promised and more than we had hoped for.

We have bred them carefully since, and to say that we were pleased with results would be expressing it mildly, and so finally two years ago we disposed of all other varieties and are now breeding the Reds exclusively.

After disposing of other breeds we bought a pen of Single Comb Reds and are breeding both varieties, but we must

confess that our preference and especial admiration still clings to the Rose Comb Reds, as we really believe they are easier to breed to type as called for in the R. I. Red Standard, are hardier, less liable to frosted combs, wattles, &c., and produce more eggs in a year, but this latter reason may be because we have bred the Rose Comb longer and have

guilty and can truthfully say in extenuation that we have never known anyone who tried Rhode Island Reds that did not also become a "Red crank." The pair of Rose Comb Reds which are the frontispiece to this copy of the AMERICAN POULTRY JOURNAL are honest, representative birds, and show what Reds are. We honestly believe them to be the equal of any pair of Reds in the country. We have been offered \$100 for them, but they are not for sale.

The great trouble in breeding Reds has been the liability of slaty or smutty undercolors when they are bred a deep red, but this trouble is being gradually but surely overcome, and by ordering your eggs or stock of a reliable breeder you are now reasonably certain of getting birds that will come as close to the Red Standard as other breeds do to their standard.

The great injustice that was done at Minneapolis by admitting the so-called American Reds to the Standard and excluding Rose Comb R. I. Reds was undone as much as possible at the special meeting of the American Poultry Association at Pittsburg, April 5, by knocking the American Reds out, but it still prevents the Rose Comb Red being admitted to the Standard until the next annual meeting of the American Poultry Association, to be held next winter, and keeps it from going in the new Standard of Perfection. If anyone who doubted the faith of Rhode Island Red breeders in their pet variety, could have been at Pittsburg and seen the enthusiastic leaders and fighters, they would have had all doubts forever removed.

They were all there and demanding justice, and justice they secured as far as they could at a specially called meeting, and the call so worded by the president (who has always been anti-Red) that the admission of the Rose Comb

Pratts Food best for your stock

PRINCE CARLTON I.

White Plymouth Rock male that heads pen No. 11 in the yards of H. P. Rankin, Hartington, Neb.

made an especial effort in the line of egg production. Our Rose Comb strain will average 215 eggs yearly, while the Single Comb average about 195.

The writer has been often called a "Red crank." To this charge we plead

23 First Prize Winners at \$3 Each

This is the number reported us hatched from eggs purchased from JONES' WYANDOTTES last season. Now this is a cheap way to start right, with the strongest blood lines on earth. These customers hatched winners that had they bought, would have cost them more than three times this amount.

EGGS FOR HATCHING

If you want the best, and eggs that will hatch winners, as well as the greatest egg producers in the world, then place your order for eggs with

JONES, THE WYANDOTTE MAN

SILVER, GOLDEN and WHITE WYANDOTTES, G. S. and S. S. BANTAMS, thirty-six pens mated to produce best results. Every breeder a line-bred bird, every male a winner with national reputation, the best lot of breeding birds I ever mated in one lot; but why not, they are all line-bred same as our winners. Fourteen prizes at Chicago, 1905, besides our WORLD'S FAIR WINNERS, should be sufficient evidence that the best is found but one place, "THE PINES." EGGS \$3 per 13, \$5 per 26, \$8.50 per 50, \$15 per hundred.

GRAND LOT OF SELECTED BREEDING BIRDS FOR SALE

Send for our 36-page catalogue, handsomely illustrated in colors and tells all about the largest Wyandotte farm in the world, how to mate and produce the strongest blood lines on earth. A book worthy a place in any library. Send 4 cents in stamps for mailing.

Fashionably Bred lot of Scotch Collie Puppies. Also some Imported and American bred brood bitches for sale.

R. E. JONES, "The Pines"

Box 5, Paducah, Ky.

Reds could not be considered at the meeting. But all true lovers of the Rose Comb Reds can rest assured that the Red breeders will not be caught napping at the next meeting of the association, and Rose Comb Reds will then be surely admitted.

So much has been written of Rhode Island Reds in the past few months that it seems useless to add anything, but a short resume of their virtues will certainly not be out of the way and to the true fancier repetition is not always objectionable.

Rhode Island Reds embrace more good qualities than any other variety of poultry. This statement will be vouched for by every one who has ever tried them. Beauty, size, egg production, excellence as table fowl, hardiness, early maturity, freedom from disease, small eaters, active, docile, easily confined (4-foot fence will always keep them in), and practically non-setters. What other breed has all these good characteristics?

What are the objections raised to the variety? The only ones you hear are from those who for selfish reasons only did not want them admitted to the Standard of Perfection.

First, that they are a mongrel breed, and, second, they will not breed true to Standard.

These claims are raised only by those who never have bred them and know nothing about them. We can and do denounce all such claims as absolutely false. Every variety of chicken was a mongrel some time.

The Red is a fair and square cross of the Red Cochins and Malay Game made fifty years ago, and by careful selection and mating by the New England chicken "pioneers," for a general utility fowl has become what it now is, the ideal American chicken, a thing of beauty, utility and joy forever.

As to breeding true to Standard, it will breed a larger percentage of standard birds than any of the Rock, Wyandotte or Leghorn varieties.

What stronger answer is needed than this? The Rhode Island Red Club of America is one of the strongest if not the strongest specialty club in existence, and its officers are men of standing and honor.

Their statements will back up every argument that has been made in this scattering article.

I have left our strongest and best reason for breeding Reds until the last, and that is early maturity. Every poultry breeder knows that in order to have sure winter layers he must hatch his pul-

growing and early maturity of Reds, as in a bunch of Red pullets nine out of ten will commence laying by the time they are five months old. If this article has not tired our readers we may at some future time give them another article, but we hope this has given some of them new light on the Red question and if so we are more than repaid for what we have written. If any reader of AMERICAN POULTRY JOURNAL wants any further information we will gladly answer any communications sent us.

Delaware, Ohio.

CHAS. C. REID.

Heyl's White Wyandotte first prize winners. Geo. A. Heyl, Washington, Ill., bred the above birds and won a silver cup on this pen for the highest scoring pen in the show.

lets in February or March, that is with Plymouth Rocks, Wyandottes and the other well known breeds. These are the two hardest months in the year to rear chicks. Not so with Rhode Island Reds. The best winter layers are those hatched in May and June (perfect months for raising chicks) while chicks hatched late in July with good care will make good winter layers, superior at least to those of other breeds hatched after 1st of April. The reason of this is the quick

Doubleday-Page & Co., publishers of New York City, have sent us a copy of "The First Book of Farming," by Chas. L. Goodrich, farmer, a new volume which they have just published. This is a valuable book deserving of sale to our farmer readers, and can be secured by writing Doubleday, Page & Co., and sending \$1.10.

Poultry Pointers

PRIZE WINNING FARM BRED POULTRY

Last Fall at various State and County Fairs we won **1628 Prizes**

The stock we sell you is just as good for breeding purposes as our prize winners. We guarantee the purity of the breeding and general health, vigor and conditions of everything we ship. Special prices if you write and call attention to this adv.

Our New Catalogue is in press and will be ready for mailing in a few days. It is the most practical poultry book on the market. No high sounding titles; just plain "Chicken Sense." Write and send five 2-cent stamps for a copy. It will save you money.

HERE ARE A FEW of the breeds shown and described at the special prices.

Light or Dark **Brahmas**; Partridge, Buff or White **Cochins**; Black **Langshans**; Barred, White, Buff **Ply. Rocks**; Black or Mottled **Javas**; Golden, Silver White or Buff **Wyandottes**; Black, White or R. C. Black **Minorcas**; S. or R. C. W. or Brown **Leghorns**; or Buff **Leghorns**; Buff **Orpingtons**; Blue **Andalusians**; Cornish Indian or B. B. Red **Games**; Pekin **Ducks**; Toulouse or Embden **Geese**; Mammoth Bronze or White Holland **Turkeys**. See catalogue for complete list.

EGGS

We pay as great care to the selection of eggs for shipping as to the mating, breeding and choosing of stock for filling orders. **We guarantee** all eggs shipped by us to be pure bred and fresh. We pack with greatest possible care. **No better eggs from anyone at any price.** Write us now for what you want and get our quotations before you buy.

The Remarkable Growth of our business has necessitated largely increasing our farm acreage and removing our business offices to commodious rooms in the Seitz Block, opposite Freeport College of Commerce. These changes give us vastly improved facilities for handling all branches of our business. We get our mail every hour and can be instantly reached by Long Distance Phone or Telegraph. Address all correspondence to Freeport. **We have no branches.**

GREAT CENTRAL POULTRY FARMS, The F. W. NIESMAN CO., Props.

Box 40, FREEPORT, ILLINOIS

FROM CUBA.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: In the department "Questions and Answers" of April I see you refer to us to satisfy B. M.'s question.

I willingly take this opportunity to be of some use to the fraternity.

First is perfectly well answered, as this is an ideal climate for poultry—no artificial heat is needed even for raising the chicks—and you may imagine the economy in poultry houses; they are pure luxury here. Respecting the second, although there is no data with which an average market price could be figured, it can be said that prices are in general fair and leave a good margin for profit. This year poultry and eggs are scarce or there has been a greater demand—hens of four pounds, more or less, are worth now about 60 to 70 cents; chicks, 30 to 35, and eggs from 2 to 3 cents and have been as high as 6 cents each. Food is pretty dear, but our greatest drawback are the breeders of your country, who seem to send us their worst—the fact is that I have been trying hard to start an egg farm (what I think pays best), and after two years will have to start afresh, because the strain I had was good for nothing, although the price I paid was very fair.

If B. M. or anybody else needs further particulars about poultry in this country I will be pleased to correspond with them through your good paper.

As this is not my language I hope you will excuse the construction and faults, if any.

RICARDO TOMAS.

Cisufuegor, Cuba.

PRINCE BLUE COAT II.

Barred Plymouth Rock male that heads pen No. 6 in the yards of H. P. Rankin, Hartington, Neb.

In this issue of AMERICAN POULTRY JOURNAL we take pleasure in publishing the picture of Barred Plymouth Rock "Invader," first prize cockerel, Chicago, 1904, and a full brother to first prize cockerel, New York, 1905. The other one is a Leghorn, "Georgous 3rd," first prize Chicago cockerel, 1904, sold for over \$100. Grove Hill Poultry Yards, Waltham, Mass., has the sire and dam

Payne's Chick Feed

The best money can buy. Sample and book, "Poultry Pointers," free.

ALFALFA MEAL CO. 1632 Farnam St., Omaha, Neb.

of "Invader" and they are in the breeding yards this season. They have also the sire and grandsire of "Georgous 3rd," and both of these males head two of their yards this season.

Poultrymen will make no mistake in buying stock or eggs from these people. The clean sweep that they made in winnings in Chicago, 1904, and their many winnings in the eastern shows demon-

strate the quality of their birds. The stock is personally looked after by A. C. Smith, superintendent, and a better breeder cannot be found anywhere in the country.

Cures every time, never fails!

Millville Matings For 1905

Will Produce Winners For America's Leading Shows

A 16-page list giving careful description and prices of eggs from every mating we have, is free for the asking. We will sell you eggs from every mating on the place, and you will stand an equally good chance with us of raising winners for 1905-6. **At World's Fair, St. Louis**, we won as many firsts as any three other exhibitors combined. An unequalled record in largest show ever held, and in hottest classes. Our winnings were made with our

Barred, Buff and White P. Rocks, Buff and W. Wyandottes

During the past five years over 1200 prizes have been won by our birds at leading shows East and West. Cockerels fit to head your best pens \$5 to \$25 each. Carefully mated pens of five birds \$15 to \$50. **REMEMBER**, we pay return charges on any birds not proving satisfactory. We have the stock. We can and will please you.

SAMPLE TESTIMONIAL.

Millville Poultry Farm Co., Millville, N. J.

Gentlemen—My first prize Boston cockerel, and winner of the \$100 Challenge Cup for champion male bird is Millville Strain. He was sired by a cockerel raised from your eggs, mated to hens from your eggs direct and is a grandson of old "Gold Dust." I think your strain of Buff Rocks the best in the country today. When in need of new blood shall send to Millville.

We won Challenge Cup at Boston in 1902-3, and a Millville bird won it in 1905. Clean sweep for our strain since cup was offered. Our new catalogue will contain similar testimonials from customers of every variety. Mated for the asking. Millville stock and Millville methods will please you, and we hope to add you to our list of permanent customers.

Very truly yours, (Signed) MELVIN FALL, JR.

BARGAIN SALE.

Owing to the large business, the Chicago Poultry Supply House, Lakeside Bldg., Chicago, will move into their new quarters June first and in order not to move all of their goods they will sell everything in the line of supplies at reduced rates. Chick feed \$2.35 per hundred. This feed has no grit in it as all other feeds have, therefore quite a saving to the poultrymen. Mr. Phillips tells us that he has sold many carloads of Model Incubators and Brooders, manufactured by Chas. A. Cyphers, and has several carloads in stock. Therefore is able to ship on short notice and you save freight from Buffalo. He is also agent for the celebrated Star Whitewashing machines.

The Partridge Wyandottes that E. A. Parks, of Syracuse, N. Y., is breeding are the original Geo. H. Brackenbury strain, he being one of the first to breed Partridge Wyandottes in the country or in the world. Mr. Parks has the original blood. Last August his entire poultry plant, along with a large storehouse, which contained about ten carloads of paper stock in bales, burned to the ground. At first sight of the fire his thoughts were for his prize-winning Partridge Wyandottes. He, with the aid of Mrs. Parks, succeeded in saving a large number of fowls at considerable risk to both of them in the burning building. He then had to turn his attention to his house to save that. In the meantime Mrs. Parks kept at work getting out the poultry and believed she had succeeded in saving all of them. Mr. Parks asked her why she should take the risk of her life for poultry, and her answer was: "I knew you had made your entry for the New York State Fair, and if I allowed them to burn up what would you do for stock to fill your entries with?" The next morning he found that only two fowls were destroyed, enabling him to make his entry at the state fair, Syracuse, N. Y., Sept. 5-10, 1904, on which he won as follows: 1st breeding pen old stock; 1st and 2nd pen chicks; 1st and 2nd pullet; 2nd hen and 2nd cockerel in a class of seventy-five birds. He was also winner at the World's Fair, St. Louis, and Brockton, Mass., where the best quality of Partridge Wyandottes were in competition. Last fall he built a new poultry house which is 70x14 feet, and now has plenty of breeding pens from which he is selling eggs for hatching. He has sent eggs to about all the states this spring from the best pen, which includes his World's Fair prize winners.

He concludes by giving a tribute to Mrs. Parks, for it was through her efforts that he is now in the poultry business, and that he was enabled to preserve the original of Geo. H. Brackenbury's strain of Partridge Wyandottes.

Among the readers of AMERICAN POULTRY JOURNAL there are many women interested in the poultry business. There are a good many women who are making a business of poultry and advertise their stock and eggs in AMERICAN POULTRY JOURNAL and with the care and attention that the women give poultry matters, as well as all other matters that they are interested in, it is only just and a compliment to the sex that women buyers patronize the women breeders. Especially is this true when the best of stock and eggs can be guaranteed.

Mrs. T. F. Leonard, of Mt. Sterling, Ohio, has good White Wyandottes. She has carefully selected four pens of her very best White Wyandotte hens and pullets of good size, shape, excellent laying qualities, mated with fine cockerels of grand shape, pure white plumage, superb carriage and fine Wyandotte points. These birds are young, vigorous stock and will produce first-class chicks. Mrs. Leonard guarantees satisfaction in all her dealings.

Mrs. Leonard's trade need not necessarily be confined to the women, for there are many men in the poultry business who are glad of the opportunity to buy stock from a breeder who is giving careful and conscientious attention to the business. They can many times secure good pointers in the management of fowls as well as buy good stock and eggs, whereby their own yards may be benefited. We take pleasure, therefore, in speaking a good word for Mrs. Leonard and her good White Wyandottes.

A GOOD FOUNDATION.

The corner-stone of a successful career in the great field of poultry culture is a man. As the corner-stone is the most important part of the foundation, so the man is the most important part in getting a start as a fancier. It does not all depend upon the quality of poultry raised nor the food fed, but upon the ambition "chickenward" that is within the man. A man whose heart is thoroughly with his chickens will spend his idle evenings contriving means whereby he can make them more comfortable for the long winter nights and the rainy days in April; he will rise early in the morning to feed them, and the quality of his chickens will improve proportionately to the amount of care they receive.

Taking it for granted that you are one of this kind, we must find the stones which will complete the good foundation. The first one is a good shelter for your fowls. The question is often asked, "What is a good poultry house?" In answer to this query, page after page has been written, all describing some particular kind of building or some favorite idea is advanced. This is all very well, but the information may all be put "in a nutshell" by saying, "Be sure your house is warm, dry and well ventilated." The modern improvements and conveniences may be added after the above has been complied with, but do not sacrifice the comfort of your fowls for anything that is simply pleasing to the eye.

The second stone is the chickens themselves. Start out by selecting your own favorite breed—then observe the following: Get the best birds your pocketbook will allow. The ambition of every true fancier is to breed perfect specimens for the show room, so when making purchases remember that by buying a poor chicken you are wasting a year or maybe more of valuable time and patience in attaining your ideal. As to the way to start, do that as profitably as possible; whether you begin with a pair, trio or setting of eggs, be sure they are from a reliable strain of a responsible breeder. Most poultry men recommend to the amateur that they commence with a pair, or trio, and from the very start breed in line, mating the best pullet to the original cock and the best cockerel to the original

Only half usual quantity necessary. **Pratts Harness Soap.**

Made by Pratt Food Co., Phila. Over 30 years old.

hen, and so on, always selecting the very best. Too much could not be said in regard to the condition of the poultry. Health and vigor are the main points to be observed along this line. It does not take a great deal of observation to make out that vigor is the main characteristic of the parent birds that is reproduced so nearly alike in their offspring. Vigor is the foundation of the breeding pens, which produce the winners for our great national shows. The recognized leaders

ing in the culture of poultry, our methods are improving, and our results are far better than ever before; nothing other than the poultry journal is responsible for the universal distribution of this knowledge, which is improving the fanciers and their product and which is instilling the liking for "our feathered friends" within the minds of so many people.

W. A. HERBRUCK.

We have received the catalogue and recent mating list of Grove Hill Poultry Yards, Waltham, Mass., of which Wm. Ellery Bright is proprietor and A. C. Smith superintendent. There is no discounting the quality of stock or eggs that go out from these yards. Mr. Bright, the proprietor, is an enthusiastic fancier, and the yards are under the personal supervision of A. C. Smith, who is well known to every breeder in the country.

We wish to call special attention to their mating list. This is one of the largest and best mating lists sent out by any of our breeders, and contains absolutely all information needed by anyone interested in the varieties that they breed, Barred Plymouth Rocks and Brown Leghorns. These people made some of the best winnings of Chicago, New York and Boston in late years, and the result of intelligent mating and breeding is clearly shown in prizes they have won. The mating list, giving all this information, should receive more than passing attention, as it contains illustrations of their birds, description of all the prizes they have won and a very complete and detailed description of all their breeding pens. They are ready for the egg trade and want to place a copy of this mating list in the hands of every reader of AMERICAN POULTRY JOURNAL.

QUEEN DODO.

White Wyandotte female, score 95½. In the yards of H. P. Rankin, Hartington, Neb.

in the poultry world never permit a bird which lacks vigor to remain in their yards—they "soup 'em."

The mortar with which we would cement these stones together is good poultry literature. Here the minute details of the work are found in a most concise and readable form. In one article the question of feeding could not be treated satisfactorily, but with the combination of articles, such as found in the AMERICAN POULTRY JOURNAL, the subject is covered thoroughly and, best of all, the advice is practical. We are progress-

C. A. Stroh, of Burlington, Wis., breeder of Barred Plymouth Rocks exclusively, has just finished a very fine and large poultry house at his new home in Burlington, and is now nicely situated to give his customers first-class satisfaction. He is sending out to those who inquire for it his catalogue describing his Barred Plymouth Rocks, including his matings for 1905, description of his stock and some good testimonial letters and prices on eggs, which are very reasonable. This catalogue will be sent to any one who writes for it, mentioning AMERICAN POULTRY JOURNAL.

HATCH CHICKENS IN JUNE.

There is no reason why farmers and others, having good range, should not successfully raise a large number of June-hatched chicks, and I believe more would be hatched if it were not for the work of properly caring for them during the hot days of July and August. This can be so arranged that they can be made comfortable and kept growing with much less care than is required for those hatched earlier. It is too much to expect of the housewife to go out in the heat every two or three hours and stand guard over each brood, to keep the older chicks from crowding the little ones away while they eat, and the average man has neither time nor patience to do it, but, unless they have good care, and plenty of food they get rough and puny and one by one drop off, until in a little while the whole brood is among the missing. This is our method and we do not find it tedious.

Large, round coops are placed in the shade of a tree. We use large barrels or hogsheds obtained from the crockery store at small cost for coops with a front made of lath and fastened so as to be easily removed. A few inches of dry earth, or what is better, cut straw, is placed in the bottom. Into this the hen, with about twenty chicks, is placed. (We much prefer the hen to the brooder for summer.) They are allowed to remain here a few days until the chicks are strong and the hen becomes accustomed to her new home and will return at night. During these first few days they are fed four times a day on bread crumbs, Johnnycake, cracked wheat or steel-cut oats. After this a crate, 2½x

3½ feet, covered with lath, so only the smaller chicks can go in, is placed in the shade. Under this is placed a pan or shallow box for the food. At night sufficient wheat with occasionally a little cracked corn is put in to last until the next noon, when a mash is given composed of one part steel-cut oats to two of bran, moistened with *sweet* milk and one raw egg to a quart of mash. The infertile eggs that have been tested out are used. They eat this greedily. Enough is given to last two or three hours and at supper time the boxes are again filled with grain. Of course, this diet can be varied and as they grow older the mash can be dropped and cut-bone given, then enough grain for a day can be placed in the boxes at night. Fresh water must always be near and the coops kept clean.

As soon as they are allowed to run at large there must be shade provided. A corn or Russian sunflower patch is an ideal place for them, as is an orchard. They like to scratch in the earth that is kept moist and cultivated, and if allowed in the corn or sunflower patch will spend the most of their time there. You can see them grow from day to day.

I have said nothing about vermin, as everyone knows the importance of keeping it down. If the hen has been dusted with insect powder before being placed in the coop and dusted once a week afterwards, there will be no trouble. If insect powder is not at hand the feathers of the hen can be slightly moistened with kerosene once in two weeks. This should be done in the evening.

The coop must be securely closed at night, for late Summer brings many enemies to the chicks.

By following this method chicks can be

easily raised, and by Christmas will compare favorably with the earlier ones. The Plymouth Rocks and Wyandottes will begin laying about that time and will make good breeders the following Spring.

MRS. C. F. DINSMORE.

North Ogden, Utah.

THE SUMMER TREATMENT OF DUCKS.

Provided the young birds can be kept out of the heat of the sun, the hatching of ducklings may still be proceeded with. The price for young ducks, which formerly fell, after the green peas were over, is now remunerative even till October, for people seem to have realized that a well-fed young duck is good eating at any time. They grow almost faster in the summer than they do earlier in the year, and are fit for the table at eight or nine weeks old. The eggs can be hatched under some broody hens, which are only too plentiful at this time. It will do the hens good to have a rest and will cause them to molt earlier and more easily and to begin laying sooner in the fall, an important matter, if the fowls are to be kept for another year.

The ducklings must be fed at regular intervals from morning till night with as much food as they can eat. Particular care must be taken not to let any lie about, for in warm weather it will quickly turn sour. Barley meal mixed with midlings and a little bran, or ground oats or corn meal are all useful for bringing

them on quickly. A small quantity of cracklings, which have been broken into pieces and boiled for two or three hours, should be added to the meal. Young nettles boiled are very wholesome, especially at this season, either given chopped up finely or the water strained off and poured over the soft food. This helps the young birds to feather and keeps them in health. The meal must be mixed into a stiff, crumbly paste, so that it can be eaten without sticking to the beaks. Water to drink must be provided both

the commonest ailments for young ducks to suffer from in the summer is diarrhoea. One of the best modes of treating this is to give milk, to which is added a dessertspoonful of ground ginger. After the milk has become cool, some dry rice is mixed with it and a teaspoonful given twice a day to each invalid.

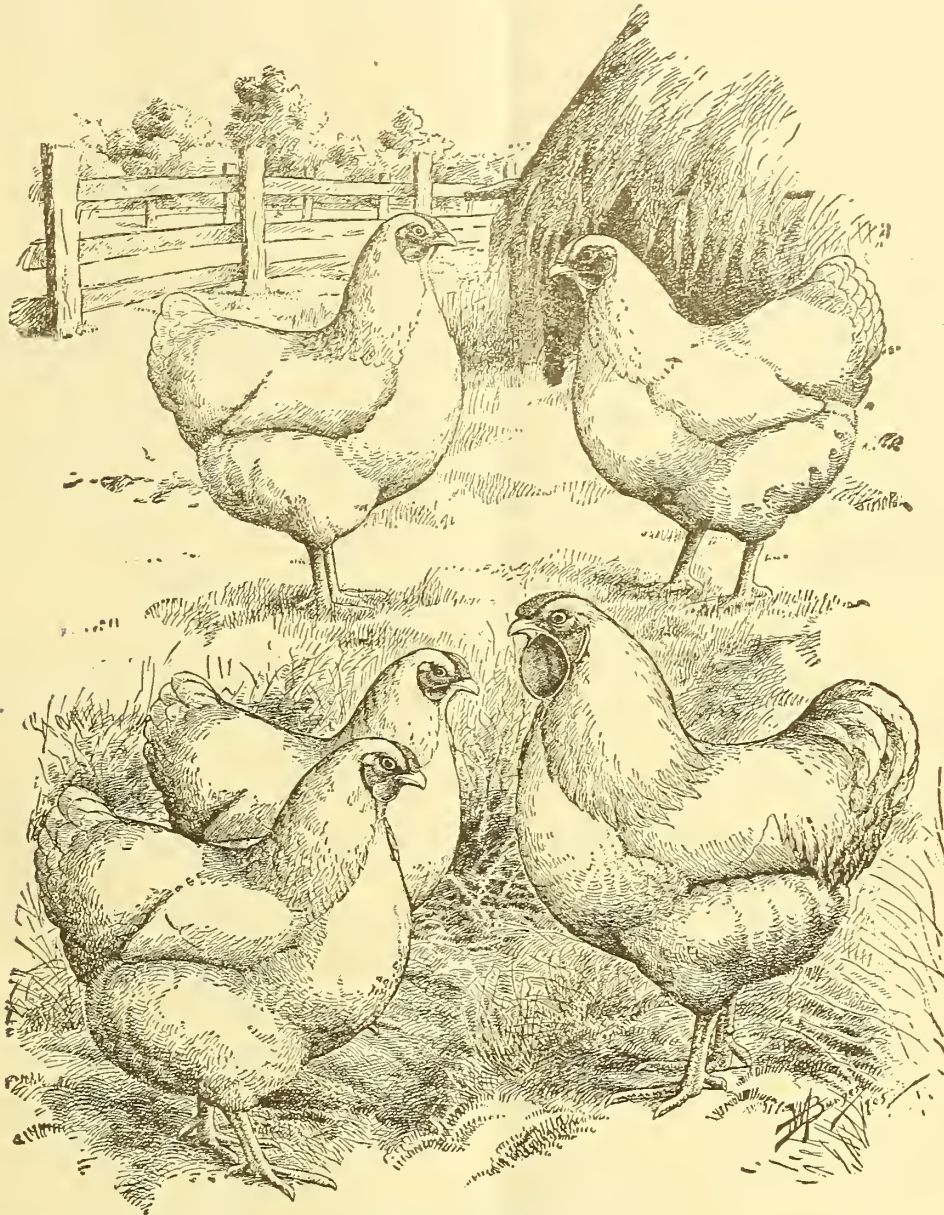

At this period of the year a drake of such breeds as the Rouen will throw off the bright feathers, which have rendered him so handsome an object, and assume

must not be allowed to become too fat. Medium sized birds should be kept instead of those that are large. Big, heavy ducks are seldom good layers, and their eggs cannot be depended on to be fertile so readily as those of less bulky birds. It will be as well to reserve a second-season drake to mate with young ducks in the fall.

PURE BRED POULTRY.

It is folly to raise any other kind. Costs no more to feed and house and raises largest and better laying stock.

The demand for thoroughbred stock and eggs is rapidly increasing. Not only do people want pure bred stock, but they want the best.

There is a reason for this. What is it? Much is due to the many poultry magazines now published in the interest of poultry raisers, the numerous farm papers, and the daily and weekly press. All papers when mentioning poultry matters at all advocate the raising of the best. Then there is another great influence at work—the farmers' institutes. Lecturers before these audiences insist upon the raising of pure bred stock from an economical standpoint. Every farmer

will admit the value of thoroughbred cattle, hogs and sheep, but has been slow in recognizing the hen and her dividend paying ability. Truly, "the hen which lays the golden egg" is the one which has been active in egg manufacture during the past two years. With prevailing prices of eggs and stock the flock of hens on the farm will pay larger dividends on the original investment than any other variety of stock. But to get good results just as much care must be given the hen in the way of systematic feeding and care as is given other stock. The same is true of mongrel or thoroughbred. There are few people who fail to admire a flock of pure bred and nicely marked fowls, no matter what variety. The mongrel is always out of place. It mars the harmony of a perfect picture and "smacks" strongly of indifference, negligence and non-progressiveness. To-day it is an easy matter for every farmer to be up-to-date. The telephone and rural free delivery of mail, bringing the daily paper,

hens. It is the best plan for the amateur and farmer.

If this plan is followed there will be no need of buying stock from other breeders each year. But if there appears a tendency to degeneracy, buy a new male and get a good one. Be content with the variety you raise, first having selected a good general purpose fowl, give them good attention and note results. There will be no disappointment. Of course, the poultry house must be cleaned each week and thoroughly freed from vermin. Lice and poultry are antagonistic—the former usually carrying off the honors in the mix-up. Be content, keep everlastingly at it, and your efforts will be crowned with success.

Attend To Your Renewal.

Many thousand subscriptions to the AMERICAN POULTRY JOURNAL expire this month, and we would ask as a favor that the matter be attended to at the very earliest date possible. Sometimes our subscribers wait to be personally notified by mail of the date of expiration. With such heavy work as falls upon our subscription department at this time of the year, it is impossible for us to write each one, so we would thank our patrons to attend to their renewals promptly without waiting for any special notification.

Subscription offers will be seen on various pages of the Journal. Send in two subscriptions at 50c each and we give your own FREE.

We cut off at date of expiration. The date on the wrapper of your paper will show to what time you are paid. "Mar. 05," for instance, means that you are paid to March, 1905.

As the policy of the AMERICAN POULTRY JOURNAL is to have all subscriptions payable in advance, we would be pleased to hear from each one in good time, so that there may be no disappointment caused by being dropped from our list. Send your subscription AT ONCE.

American Poultry Journal Pub. Co.

325 Dearborn St., Chicago, Ill.

make all this possible. With all this the climax has not been reached unless all scrub stock has been disposed of. To breed pure strains in stock does not imply that a farmer is a "crank," but brands him as a scientific and prosperous man. This argument is fact, not fancy. The "getting a start" is a great "boogoo-boo" with so many who have become converted to the pure-bred theory. It is waste of time to search the country over for the cheapest eggs and stock to be found. Such economy may prove to be a false economy, much to your chagrin, when the harvest time comes.

Pay a fair price and buy from reliable breeders. Start right and keep right. After the first season dispose of every other variety on the place, cull your flock closely and sell all poorly marked or undersized specimens. Keep right by employing the line breeding plan—best cock to best pullets and best cockerel to best

1st, 2nd and 4th hen, 95, 95½; 1st, 2nd and 3rd pullets, 95½, 95¾; and all of the National White Wyandotte Club specials for best cock, best cockerel, best hen, best pullet and best pen; also the \$65 sweep-stake prize for the highest scoring pen over all varieties in the show, 100 pens in competition.

Every one of these birds were bred by Mr. Chas. McClave and not purchased for the show. He commenced breeding this variety before they were admitted to the Standard, therefore has the oldest strain in Ohio. His birds are especially strong in size, low, even comb, bay eyes, clear white plumage, good yellow shanks, and typical Wyandotte shape. His breeding pens contain fully 200 head of exhibition birds.

Geo. O. Anderson, of Rushville, Ind., has been making quite a record with his Bronze turkeys of late, and at Cincinnati's big show he won everything in sight. He has some grand B. P. Rocks and won 3d cockerel in a very hot class. His Giant Brahmas, too, have been winning at the big shows. George is a clever fellow and those wanting eggs will do well to write him, as he has the goods and will treat you right.

FARMERS NEGLECT THEIR POULTRY.

Farmers do not give enough attention to their poultry. Last June, after I was through breeding, I thought it would be a good thing for my Wyandottes to send them out in the country until about September. I looked around for a reliable man and found one about a mile from town—an ideal of a place; two big wheat fields for them to roam in. He was to have the eggs for their keep. I looked for their henhouse and could not see one. He said he had lived there for ten years and never had any use for one; their chickens roosted in trees in summer and the barn in winter. He had about a dozen mongrel hens and a variegated colored Leghorn cockerel. He consented to kill the cockerel, so I took two of my

male birds out with the hens. He let me fix up an old outhouse for them. I whitewashed it and sprayed with disinfectant, and his wife said, "Oh fudge, such fussing with a few chickens." In a few days they commenced to shell out the eggs.

He thought it strange mine laid most every day, while his not over half the time. He set eggs from my hens and some from his. The "Dottes" seemed to start to grow as soon as out of the shells. He said he never thought there was so much difference in thoroughbreds and common chicks. Several of the neighboring farmers came over and looked at the two broods, and would hardly believe they were hatched at the same time. I have demonstrated to them the superior qualities of the fancy birds over the common barn-yard fowls.

This farmer's wife made fun of me for cleaning out every week; she said her father used to clean out their henhouse every spring. She said their chickens did not have any lice. I caught one and sprayed it with insect powder and shook her over a clean paper. They had lice by the thousands. If farmers would discard their cocks and cockerels and get good males to breed to their females they would be ahead at the end of the year. It would be better to sell off all the common stock and get some thoroughbreds or eggs from some reputable breeder. There is nothing prettier than a flock all of one color, no matter what breed. Most farmers think the hen is too small a business for them. I could take this man's place and raise as much wheat as he did, besides stocking it with chickens and turkeys, and let the fowls have the run of the fields after harvest, and make more out of the poultry and eggs than he got for his wheat. The majority of farmers have six months out of the year to look after the poultry, if they were not so "tired" or have to go to town about every day.

I know a man that bought 100 White Rock cockerels from U. R. Fishel and advertised that the farmers around could have one or more for \$1 each and breed to their mongrels, and he would buy them back in the fall for the price paid by them. His object was to raise the standard of the common stock. Only twenty-five or thirty farmers took advantage of his offer. He is a shipper of dressed poultry. He told me it was discouraging to try and do anything with farmers in general as regards poultry. They say it is work for the women. With all respect for the farmers, I remain, yours, &c., D. H. Ruhl.

Middletown, Ohio.

BUSY POULTRYMEN.

These are busy times for the poultry fraternity. The prolonged cold and backward spring made buyers slow about placing early orders and now every one is in a hurry.

It is under conditions like these that a large firm like the F. W. Neisman Co. of Freeport, Ill., show up their facilities to the best possible advantage. With a volume of business crowded into a few short weeks that ought to cover months they handle their orders swiftly and make no mistakes. A visit to their immense farms just now would be very interesting except that every man and boy about the establishment is on the jump from early to late hustling to fill orders, and visitors would have to shift for themselves unless they were buyers.

Eggs are in great demand just now, but so carefully has Mr. Neisman prepared for this feature of the business that very prompt service is given all orders for eggs, thus insuring fresh eggs from pure bred stock of undoubted health and vigor. Their being farm bred safeguards against disease or low vitality.

We can and do very heartily recommend this firm to readers of AMERICAN POULTRY JOURNAL. Write for their catalogue. Address F. W. Neisman Co., Box 40, Freeport, Ill., and mention AMERICAN POULTRY JOURNAL when you write.

NOTICE.

Chas. A. Cyphers states that his advertisement in this issue appears to him to be the most important one he has put out. He would ask that it be read carefully.

№2 MULTIPLE ROOST STYLE

The Raising of Pigeons with Poultry.

The breeding of pigeons in connection with poultry either for the fancy or breeding squabs for market has engaged the attention of poultry men in many instances, and with some it has been the means of adding quite a little to the income of the breeder. A place for the loft or pen may be utilized that heretofore has simply served for storage or as waste room such as the loft of a barn, stable or shed, or any building so that it is dry and comfortably built. The birds may be confined to fly in a covered run or flying yard or allowed their liberty. As the game birds are constantly becoming more scarce, the demand for squabs for hotels, restaurants, clubs, and private families is constantly on the increase, and the largest and most steady income from pigeons will be from the breeding of squabs. The cost of keeping pigeons is not so large as poultry, a pair of pigeons will eat about one bushel of grain per year, including the feeding of their young, so that one can easily figure the cost. The fact that they can be kept in comparatively large numbers in small quarters has its advantages, where a breeder has but small space at command.

The breed to keep for raising squabs for market has many advocates of different crosses, just as some breeders of poultry think that certain crosses of pen-bred poultry make better market stock or layers. A squab that will weigh about 6½ to 8 pounds to the dozen is a desirable size. Crosses commonly used are Homers and Runts, Homers and Mondamis, Homers and Dutches, or Antwerp

and Dagoon, instead of the Homers crossed with the above. But the writer has found that quite as good results can be obtained by the judicious and careful breeding of Homers, breeding on the line of the parent birds that are the most prolific and that raise the largest and best squabs. Homers are the most rapid breeders and best feeders of their kind. They will hatch from 5 to 11 pair of squabs a year, and by careful selection the average can be largely increased and maintained. Now as to the profit, squabs are selling now in the eastern markets at from \$2.50 to \$3.50 per dozen at

wholesale. The price will average about the same throughout the year rather more than less. The cost to keep a pair of Homers, including the raising of their young, at the present time, is about 75 cents per year. An average flock of Homers should produce at least six pair of squabs, carefully selected, will raise more. Six pair of squabs are worth \$3.00, showing profit of \$2.25 per year.

CHICK GROWER

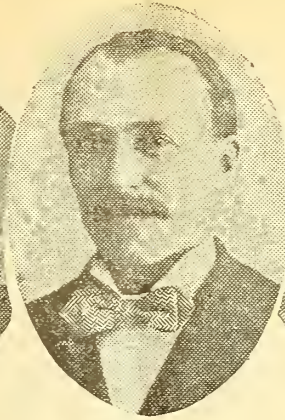

A fine condimental meat food for chicks during the summer months—makes the little fellows grow—develops bone, muscle, strength—quickly brings them to maturity—puts them on a profit basis. Pullets raised on Lee's Chick Grower start laying a month or two earlier than those given ordinary feed. Try it and see. **2½ lb. pkg., 25c. 25 lb. pail, \$2.00.**

"Last season I hatched 138 chicks. When they were ten days old I began feeding Lee's Chick Grower in the mash. Out of the 138 I lost only five. I attribute my entire success to the feeding of your Chick Grower." D. A. McKinnon, Manchester, Massachusetts.

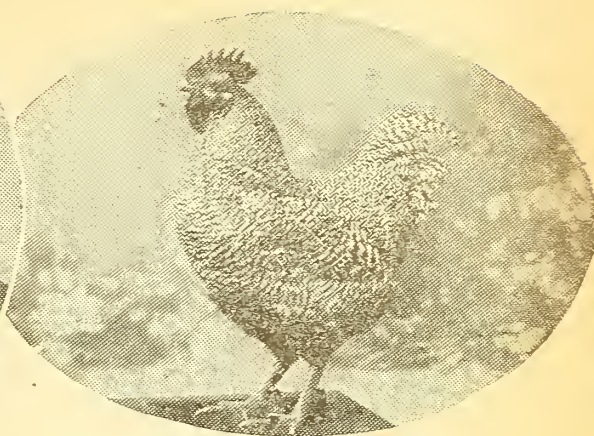

Score 92½, winner of four 1sts.

B. G. Westfall, Oak Grove, Mich., and his Barred Plymouth Rocks.

Score 93. 93, 93½, winner of three 1sts.

STARTING WITH EGGS.

Good readers, no doubt you are one of the many who has for years been waiting and wanting to start with thoroughbred poultry, but have put this good work off from time to time from some trifling cause.

Now, it don't take the earth in value to start, and start right into it, and now a word to those who contemplate starting this spring by buying eggs.

Let us say from our long years of experience, and much of it very costly at that, as we had no one of experience to inform or explain the ups and downs to us, but don't wait too late, as the time is now at hand for hatching, and we have many hundreds of beautiful little fellows off and doing fine. Study out the breed you wish to try and that best suits your taste, also one of the most popular varieties as well as most profitable one, and then send to some reliable breeder whose strain is well known for his or her catalogue or circular fully explaining their matings, with prices on eggs as well as show winnings, then study all over closely and go for the best every time and leave cheap, shoddy birds or eggs alone, as the best is none too good for the beginner.

Go to the breeder whom you can rely upon and that can offer you good quality, then buy of him.

When a fancier uses particular care in selecting and mating up his breeding yards, also mates them for very best results, and succeeds year after year and has at all times quality to offer, one can hardly have a failure in sending orders to such breeders, for if he will send to such for the best eggs he will in most every instance get full value and satisfaction.

Of course, one should not expect too much of a good thing; in fact, if a 75

**A quick poultry fattener
Pratts Poultry Food.**

Made by Pratt Food Co., Phila. Over 30 years old.

per cent hatch is received, he should consider himself extraordinarily lucky, and a 60 per cent hatch very lucky. Do not expect always a 100 per cent hatch, as you surely are aware that very few breeders obtain such hatches themselves at home, although every breeder's ambition is to get all the fertility in his eggs possible, and we ourselves have been breeding our Gem Strain S. C. White Leghorns for heaviest egg production and Standard requirements with rigid and personal care for over twelve years, and have been exceedingly successful; also, we have had from many customers, even in Canada and Mexico, reports of 100 per cent hatches, and have time and again hatches of 100 per cent ourselves, but we never figure on such high fertility, and the customer should not figure on such, as eggs are roughly handled by the express people. Many can save a few eggs if they will use a little bay-horse sense and care, by letting their eggs on arrival rest or settle for twelve to twenty-four hours before placing under hen or in incubator. Then if all is right you will surely get a satisfactory hatch, as eggs for hatching, my dear reader, has started many a man and woman into this profitable and pleasing business, and will continue to do so until this world is no more. Yours for better poultry and more of it,

WILBER BROS.

Petros, Tenn.

FOR ONE WHO HAS NOT THE TIME TO CHANGE FEED OR FEED FROM A SELF FEEDER.

Take 10 bushels of cracked corn and run it through a windmill to take out all fine meal (which can be used for the mash or cow feed), twelve bushels of good wheat, four bushels of oats, one bushel of sunflower seed, same of millet and buckwheat and fifty pounds of beef scrap; dump it all together on the floor and mix well with a shovel; feed and make the hens laugh.

EGGS IN COLD WEATHER.

Being interested in Langshans we are always glad to hear of their many good qualities. This winter has been the coldest known in this section but during January and February we had plenty of eggs. On the coldest day this winter forty-five hens and pullets laid thirty eggs. In a letter from a friend just received he says my ten Langshans laid an average of nineteen eggs during the very cold month of February. We have ninety black beauties out and on the 10th (Mar.) they are two weeks old. All are healthy and are making rapid growth.

CHAS. G. MILLER & SON,

Boonville, Mo.

GIVE NAME AND ADDRESS PLAINLY.

Purchasers are warned time and again to give name and address plainly, when writing inquiries or purchasing stock of eggs, and giving shipping directions is full. Yet how often letters are received by breeders and shippers with the name and address carelessly written, in fact more so than the rest of the letter. In some cases it takes an expert to interpret it, and few comparatively give any shipping directions at all. In such cases purchasers should not blame the shipper for delay or even loss.

Pearl, Ill.

MRS. A. J. COHEN.

A SHETLAND PONY CENTER.

Washington, Tazewell county, Ill., is quite a center for the rearing of Shetland ponies. From 100 to 150 are shipped from there each year to various places all over the United States. President Diaz of Mexico recently purchased one of these ponies and it was shipped by express from Washington to Mexico City, for the use of the grandchild of the president. Mr. George A. Heyl makes a specialty of Shetlands, and has forty acres of land devoted to their rearing and care. He also keeps fine fowls and hogs, but next to his ponies come his sale of eggs for hatching. He receives a high price for his eggs and his sales since March 1st of this year amounted to \$8,000. —Ex.

Medina, Ohio.

BUGGY BARGAINS.

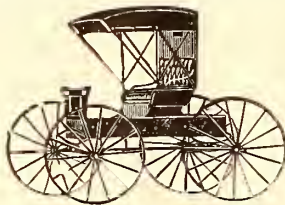

With the advent of pleasant weather many of our readers are considering the purchase of a new vehicle of some sort, perhaps a driving wagon, a buggy, a phaeton or a surry. We are glad to be able to direct all those interested to the ads of Elkhart Carriage & Harness Co., which appear regularly in our advertising columns. In looking over their catalogue we are so impressed with the great variety of their

line and their very moderate prices that we are inclined to style their goods as Buggy Bargains.

We show here two of their popular styles which we hope will incline the interested reader to write for their catalogue, which shows over 200 styles of vehicles and 65 styles of harness.

Now a word about the company. This house was established almost one-third of a century ago by the father of Messrs. W. B. and G. B. Pratt, who are now conducting the business. They are now the

oldest as well as the largest factory in the world making and selling vehicles direct to the consumer.

We have known the concern ourselves for many years and have taken pleasure in their growth and success, because we have every reason to believe their business is founded upon honorable principles and generous treatment of their customers. It is no disparagement of others to say that we believe the Elkhart Company are trying to make the very best vehicles they can turn out. We can and do very heartily endorse and commend them to our readers. Write at once for their catalogue, which they will mail free. Address Elkhart Carriage & Harness Mfg. Co., Elkhart, Ind.

WHAT UNCLE CHARLEY SAYS ABOUT CHICKENS.

Don't feed young chicks on a dirty floor covered with dust and trash; many brooder chicks are lost in this way. Don't expect chicks to grow and live on a wet mash—they won't do it. Keep a little fine grit and bone in a separate bin. Scatter a little straw and pure Alfalfa Meal on the floor and throw the grain on this. Uncle Charley, seventy years a poultryman, says chickens should scratch for a living, and he gives a lot of valuable advice to chicken raisers in a book called "Poultry Pointers," which will be sent free to all our readers who will write for it and mention this paper. The book also contains an interesting article on Payne's Alfalfa Meal, a new product made from pure green kiln-dried Alfalfa. Every poultryman will be benefited by reading it. Write today for a free copy of "Poultry Pointers." Address Alfalfa Meal Co., Omaha, Nebraska, and say you saw this notice in AMERICAN POULTRY JOURNAL.

THE NEW ZEALAND SHIPMENT OF J. C. FISHEL & SON OF HOPE, IND.

J. C. Fishel & Son of Hope, Ind., the White Wyandotte breeders, recently made a shipment of their birds to Petone, Wellington, New Zealand, and the customer reports that "The birds arrived in fine condition, and I am well pleased. I showed them at the last fall show, took first and special for best birds. You may know that I am well pleased. Note the clipping out of one of our papers: "Mr. V. H. B. of Petone, Wellington, New Zealand, received by last Frisco Mail steamer a very fine pair of White Wyandottes from the poultry yards of J. C. Fishel & Son, Hope, Ind., U. S. A., who claim to breed the best Wyandottes in the world. This assertion is not without reasonable grounds, as their birds were chosen to represent the White Wyandottes at the Model Poultry Farm, World's Fair, St. Louis, Mo. Mr. B. reports that Mr. Fishel & Son have treated him well and that he is well satisfied. The cockerel is a beauty, is snow white and every inch a Wyandotte. The birds are to be shown at the Palmerston North Spring Show."

The above is a fine testimonial to the value of the birds raised by J. C. Fishel & Son and cannot help but be a strong argument in proof of the claims that the gentlemen make for quality of their stock. They have had a great stock and egg sale this season and are still prepared to do a rushing business the balance of the season. They will be glad to send their catalogue to anyone mentioning AMERICAN POULTRY JOURNAL.

It gives us pleasure to call our readers' attention to the following letter received from the Universal Exposition, St. Louis, Missouri:

To Prairie State Incubator Co.,

Homer City, Pa.

Pursuant to the rules and regulations governing the system of awards, formal public announcement is hereby made that a gold medal has finally been awarded you on your exhibit of incubators and brooders in group No. 82. A medal and diploma for this award will be issued by the exposition company as soon as ready for delivery.

(Signed) DAVID R. FRANCIS,
President of Superior Jury.

By this it will be seen that the Prairie State Incubator Company of Homer City, Pennsylvania, have added one more medal to their already long string of 326 first premiums received at various expositions and fairs throughout the country.

Their catalogue also records hundreds of original testimonials from users of their machines, from the extensive poultryman as well as the small beginner, and they all report good results. Their catalogue is well worth sending for, as this is one of the old, practical and reliable institutions.

Brent & Eddy, Oconomowoc, Wis., report that they have four pens of Cornish Indians better than any they have ever bred from and should produce some grand young stock. Pen 1 is composed of seven large and grandly laced exhibition hens, headed by 1st prize cockerel, St. Louis Exposition. This cockerel, trifle small early in season, but is rounding out into a splendid male, nearest perfect in color and shape of any we have ever owned.

Pen 2, composed of nine pullets, the pick of our yards; this pen headed by cock bird Jumbo, IV.; won 1st as cockerel, Chicago, 1904. Weight 10½ pounds. Grand in size, shape and color.

Pen 3, ten pullets, large and vigorous breeding birds, headed by cock bird, very stocky in build and of good color.

Pen 4, nine good hens, mated with 3rd prize cockerel, Chicago, 1905. Also four pens of grand birds in White Wyandottes. No stock for sale in either variety at present writing.

We are in receipt of a catalogue and mating list from C. S. Byers, Buff Orpington breeder, of Hazelrigg, Ind. It is giving this catalogue full justice to say no better piece of work was ever put out by a poultry breeder. It is certainly a work of art. This is not all of its merits, for it contains illustrations of Mr. Byers' birds, scenes from his yards and splendid information to Orpington breeders; a full description of his winnings, his breeding yards and a complete mating list, and concludes with some splendid unsolicited testimonials from his customers. Every Orpington breeder should send for a copy of this catalogue.

John A. Barnum, of Coldwater, Mich., breeds Barred Plymouth Rocks exclusively. At the State Show, Detroit, Jan. 3-6, 1905, he won 1st cockerel, 1st hen and 1st pen, winning three 1sts out of three entries. He also won 1st cockerel on one entry at Hastings, Mich., Feb. 15-18, 1905, and this was not his 1st Detroit cockerel. He has all these winners in his breeding pens, and he grows all his own prize winners. During the past year and a half he has won seven 1sts out of eight competed for, besides one 2nd, one 3rd, tying for another 2nd and 3rd, and special for best cockerel and best pullet. He is right now in the busy egg season and is prepared to sell eggs in any quantity, and with his record back of him surely his purchasers can produce prize winners.

A NEW POULTRY BOOK.

Especially Written and Designed for the
Beginners—Sent on Approval.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

We want every beginner to read his book and we are willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to us for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

PRIZES GIVEN AWAY.

Geo. A. Heyl of Washington, Ill., is giving prizes as follows:

For the largest order in cash received for eggs during the season of 1905, which closes August 15, I will give a pen of four pullets and a cockerel of any variety I raise. This pen will be of my very best birds mated up not akin. In addition to the above I will give a credit of \$10 to apply on any order for poultry received by January 15, 1906.

For second largest order I will give a trio of M. B. or W. H. turkeys from my prize winners.

For the third largest order I will give a trio of Pekin ducks.

A prize with every order amounting to \$15 or over, a choice cockerel of 1905 hatch of any variety you may choose, will be given. To every \$5 to \$15 order I will give a year's subscription to a good poultry paper.

A FIRM BELIEVER.

If George Heyl of Washington, Ill., ever had his doubts as to the efficacy of printer's ink, they would have been dispelled this week when he received orders from Australia and Africa.

Chapman & McQuillan of West Hartford, Conn., are sending out a very nice circular regarding their matings. They breed Barred and White Plymouth Rocks and the specimens illustrated in their circular show that they have good stuff to sell. They were winners last year at Herald Square, New York, and also at Hartford, Conn., and other important shows.

One of the interesting catalogues that has come to us recently is that of the Dearborn Poultry Yards. S. D. Lapham, proprietor, Dearborn, Mich. Buff Plymouth Rocks are raised here exclusively and the fact that they took fifth prize pen at St. Louis demonstrates the quality of stock that they raise. Mr. Lapham writes that he is enlarging his plant and putting in a big steam heating system and improving his outfit in every way. Mr. Lapham will be glad to send his catalogue to any one interested in poultry, in which are illustrated many of his prize winners at recent shows.

Harry T. Reed, the Light Brahma breeder of Camp Point, Ill., made winnings as follows: Macomb, Ill., Dec. 5-8, 1904, Chas. McClave judge, 1st cock, 93; 2nd cockerel, 92½; 2nd pullet, 93½; 2nd pen, 185; 3rd hen, 91¾; Jacksonville, Ill., Dec. 13-17, 1904, D. T. Heimlich judge, 1st cock, 94½; 1st pullet, 92½; 3rd pullet, 92; 2nd pen, 185. There is no question regarding the quality of Mr. Reed's Light Brahma stock, and AMERICAN POULTRY JOURNAL buyers will make no mistake in buying stock or eggs from him. He will be glad to send any one his last circular containing his matings and prices of stock and eggs.

Geo. M. Kline, Box B, Downers Grove, Ill., says you don't need a rabbit's foot or four-leaf clover to hatch prize winners from his Barred Rock and White Wyandotte eggs. They represent twelve years of careful breeding and he has paid great attention to this year's matings. Buyers will be well satisfied with results and the prices, which are low.

B. E. Johnson of Kirkwood, Mo., is making a sacrifice on his Barred Rocks and for the next thirty days will offer 100 extra fine breeders at one-quarter their value.

Keep the bone cutter well oiled.

Keep the green bone cutter clean.

Always feed before you water the fowls.

Cabbage contains nitrogen in a bulky form.

During cold weather the mash should be fed warm.

Be careful not to feed spoiled or musty food.

Green bone should be fed fresh and untainted.

A quart of skim milk weighs about 2½ pounds.

No danger of having too great a variety in the bill of fare.

The cheapest and best form of meat for poultry is green cut bone.

Nothing better for mixing the morning mash than warmed skim milk—if you have it.

Feed the evening grain an hour before dusk, so that the fowls will exercise well for it.

A necessity in every stable

HOW TO SLEEP WELL AT NIGHT.

There are a great many discouraging things connected with raising poultry. It is discouraging to go out into the fowl house in the morning and find one of your best fowls dead from no assignable cause. It puts a crimp in a man's enthusiasm to find that just before show time two of your male birds have somehow got at each other, and, though they have enjoyed the scrimmage immensely, you are unable to partake of the general joy inasmuch as they are not fit to be seen in the show room until such time as the show is all over. But of course it is your own fault and you should have been more careful. It is likewise calculated to cast a spirit of gloom over the fancier when in saluting a tray full of eggs, his hand slips, and he makes an omelette on the floor. If such things happen at all, they have a way of happening about the 20th day of incubation. Bad language, while perhaps pardonable in such cases, does not set Humpty-Dumpty back again, as the old song has it. Likewise it is doleful to notice that your very extra choice eggs, set under your most approved motherly hen, are slowly but inexorably disappearing. You feel your respect for motherly old hens rapidly falling, and, a prey to the worst suspicions, you finally and irrevocably decide that she must die. No egg eaters, however sedate and of however fine a past record, shall be allowed about the place. You hate to do it, but duty calls, and off goes the old gal's head. Later you discover that it was a certain little canine pet who had been stealing and eating Biddy's eggs, and not Biddy at all. That very night Fido meets a sudden and inglorious death; the children lament his absence and you perjure yourself; but so long as Fido reposes in that hole in the ground, next to the old oak tree, that unpleasant episode of suspected egg-eating will never occur again.

But all these various accidents, casualties and contretemps of the poultry yard are as summer sunshine compared with the experience that under the cover of darkness some thief has entered and stolen from your hen house your prize chickens. There is a certain meanness, smallness and contemptibility connected with robbing a hen roost that attaches to no other form of nocturnal marauding. A man may steal a dog, and not suffer especially in public opinion. It takes a good man to steal a horse, and, especially in the West, there is a certain element of danger therewith, that lends fascination to the theft. To enter a dwelling house and carry off plate, clothing and jewelry is recognized as a feat and an art. The bank cracksmen must be a man of unusual nerve and skill, while he who steals a million dollars is looked up to and respected by a large number of otherwise correctly moral citizens. But to steal chickens—foul!

Fortunately the chicken thief is a man of mediocre mental attainments and limited personal courage. He is essentially a sneak thief. He works under cover of darkness and in perfect silence. Consequently the proper method to circumvent the chicken thief is to reverse these conditions under which he works—that is to create a racket and to throw a flood of light on his operations. Of course a man might sit up all night with a dark lantern and a tin pan for instance and beat the pan and throw the bull's eye ray on him whenever operation

began. But this for obvious reasons is not recommended. A better way is to employ electricity. A small electric light and a clamorous bell will do the business if properly arranged. The moment Mr. Thief opens a door or a window or steps on a plank, bang! goes the bell, and flash! goes the light. The entire outlay need not cost over two dollars, if a man has any handiness and ingenuity.

You can buy a small alarm bell for about a quarter, and you can buy a two-candle-power electric light with stand for about 40 cents. You need about four or five batteries (in power). This may be one dry battery or several dry batteries or the right number of wet batteries. Wet batteries will renew themselves when run down, and can be renewed with fresh sal-ammoniac as needed. Dry batteries have the advantage of not freezing, but the disadvantage of giving out all at once when exhausted, without warning. If one must use dry batteries, it is better to use several small batteries in series and occasionally test each one with a bell connection to see if still alive. The dead ones should be replaced at once. If you can keep your batteries in your cellar, it is better to use wet batteries. If your fowl houses are some distance from your house, use dry batteries, frequently testing them. It is best to have two bells on the circuit: one in the hen house and one in the dwelling house. But of the two that in the hen house is the most important, as the thief should hear the bell ring himself the minute he begins operations. If your fowl house is damp, you should have an extra bell to "spell off" the first bell, as rust will accumulate on the damp bell and interfere with its working. Take the damp bell from the wall and put on the fresh bell and dry out the other and spray it with some sort of oil to keep out the dampness, then change off again.

Be very careful in wiring up. Make your connections firmly and carefully. Get a roll of "friction tape," which is the same as the tape used in binding a bicycle tire for temporary repair. Whenever you bind together two wires, wrap the joint carefully with this tape. Don't use one staple for the two wires, as you are liable to have a short circuit from rust, friction or moisture where the iron of the staple comes in contact and wears off the insulating wrapper of your copper wire. Don't let your wires touch an iron or metal pipe that has connection with the ground or you are liable to lose your electricity slowly and surely. Be very careful how you arrange your switches, taking care that all wires are properly insulated and wrapped. The great trouble with amateur wiring is the danger of short circuits. By short circuits are meant connections that are not intended. For instance, if you will look at an ordinary battery, you will see what is called the carbon and the zinc points. The electricity will pass from one point to the other by a copper wire, whether short or reasonably long. If you had an insulated wire 50 feet long, the current would traverse that wire passing from the carbon over the 50 feet and returning to the zinc. When a short circuit occurs, the electricity does not traverse the whole of the desired circuit, but finds a short cross cut, owing to imperfect wiring, and returns to the battery without doing the work desired. This is in the nature of a permanent leak, and the battery speedily runs down and is exhausted.

From personal experience I have found that a good way to wire up a hen house

is as follows: Supposing that your batteries are in one end of the house up out of reach of the hens in one corner, run a wire the whole length of the house and back, up close to the eaves. At any place where electrical supplies are sold you can get burglar alarms at a few cents each, consisting of a brass cylinder in a sleeve, so arranged that when the sleeve springs out, a connection is made, but when the sleeve is in, no connection is made. Set these sleeves in the side of the door or window, so that the moment the door or window is opened the sleeve springs out and makes the connection. These sleeves are set in the wood out of sight. Properly set up, the door or window cannot be opened without making a connection. Don't cut your long wire, but scrape off a little of the insulating cover and wrap the wire from the sleeves around your long wire, binding the connection carefully with binding friction tape. Do this with every door and every window that you desire to be connected up. Do the same with the little electric incandescent lamp, which preferably is in the ceiling or up out of the way.

Be careful that each wire is wrapped and bound where connections are made. Then cover the wires so they cannot be seen. Tar paper or laths or almost anything will do, provided it is not put on in a way to invite attention. Put in your bell somewhere between your batteries and your first connected door or window. Similarly with your electric light, so that whatever door or window is opened, the bell rings and the light flashes instantly. Have a switch so that in the day time you can throw the apparatus out of connection when not needed. But don't forget to turn on your switch at night! If you have your batteries in your cellar, you can arrange in your dwelling house so that you can manipulate the apparatus from the house. Or you can so arrange matters that if your suspicions are aroused at night, you can turn on the light in your fowl house without leaving your own bed room.

It is also an excellent device to buy more wire than you need and to string up a lot of dummy wires conspicuously about the yard and have a rusty bell or so set up where a thief who should happen to be surveying the lay of the land preparatory to some nocturnal descent, might take warning. Cutting dummy wires would serve to amuse him and would do no harm to the apparatus.

I repeat that the main thing is to do your wiring well at first, to test your bell occasionally and your light and your batteries. The original outlay need not be more than two or three dollars and the cost of maintenance should be not more than 50 cents per year. It is worth the money. E. L. C. MORSE.

Buff Cochin Bantam Cockerels \$1 each.

I have a few medium light cockerels that will be disposed of at this price. Also have some choice exhibition breeding cockerels at \$2 each. If you want something good for this season order one of these at once.

JAS. W. BELL, Congress Park, Ill.

Classified Ads.

Under this heading ads will be inserted for five cents per word each month for less than three months, **three cents per word for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. Commencing with the January, 1941 issue, all ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Forty thousand per month.** We guarantee an average monthly circulation of 40,000 copies of AMERICAN POULTRY JOURNAL. When placing your ad remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

60 " " " .48	60 " " .85
72 " " " .54	72 " " .93
84 " " " .60	84 " " 1.00

This fence is put up in 10 and 20 rod rolls. We accept orders for any number of rods or rolls, and pay freight on orders for \$10. or over almost everywhere. We have poultry yard gates covered with this fence. They open both ways; are very convenient, durable and sightly. Price list free. For more than five years we have been selling Union Lock Poultry and Field Fence to farmers and poultrymen. They prize it for many reasons. It is

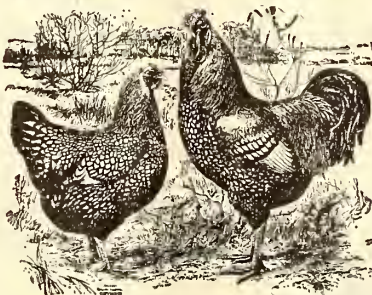

The Fence That Does Not Sag.

It stretches perfectly and fits uneven ground. It is easily erected. Its horizontal cable wires make it strong enough to turn all stock, while its 1 1/4 inch meshing at the bottom keeps in the little chicks. Extremes of heat and cold do not affect it, it adjusts for all temperatures. It is sold at farmers' prices.

WE MAKE PROMPT SHIPMENTS. For this purpose we maintain mills in both Connecticut and Illinois. We ship from nearest mill. Send in your order now and be ready for an early spring. Catalog of Farm, Poultry and Lawn fence free. Write for it.

CASE BROTHERS, 44 MAIN STREET, COLCHESTER, CONNECTICUT.

DO YOU KNOW HUMMEL?

If not you had better get acquainted. I have bred and exhibited fancy poultry for 14 years and have shipped eggs and stock to every nook and corner in the world. "MONEY in POULTRY."

Our new 84-page book for 1905 tells how to make it; also how to breed, feed, grow and market your poultry for best results. This book probably gives more reliable information about the poultry business, obtained from actual experience on the largest farm in America devoted exclusively to the rearing of pure-bred poultry, than any other book published. Describes and illustrates 25 varieties of our pure-bred fowls. Quotes extremely low prices on stock, eggs, incubators and brooders. Mailed for 4c in stamps.

FRANK FOY, Box 50, DES MOINES, IOWA.

St. Louis World's Fair Winners of 27 Regular and 9 Special Premiums.

800 WYANDOTTES and SEBRIGHTS 800

We have about 800 head of very fine Golden, Silver Laced and White Wyandottes and Golden and Silver Sebrights yet to spare at very reasonable prices. Our birds have won more than 300 premiums at Madison Square Garden show since 1891. In 1903 we won first on breeding pen of both GOLDEN and WHITE. They have won at all the big shows for the past 18 years. If you wish to buy fine line-bred birds from utility stock and exhibition quality combined, we breed that kind. Eggs from our fine matings \$3 per setting; two settings \$5. Our large circular is free and tells all about our birds. ALSO FINE BELGIAN HARES CHEAP.

IRA C. KELLER,

BROOK SIDE FARM, Box 75, Prospect, Ohio

King's Barred Ply. Rocks

are attracting the attention of the poultry world. Why? Because they excel in many respects. In fact are recognized as superior by many of our best judges. Are bred according to the latest and most approved method of mating for producing best results for show room or breeding pen. A few eggs will demonstrate this fact to you. They are the same price as for earlier in the season. May is the month to set eggs for January show birds. Can spare a few more settings. Write me today for circular and prices on breeding stock that will be offered after June 1st. Remember the specialist for best results.

O. L. KING,

Lock Box 4, Walnut Grove, Ill.

Barred Ply. Rocks Exclusively

My breeding yards are represented by birds of royal breeding and grand individuality. **Cockerel matings:** Yard 1 headed by ckl. whose sire was a first place winner at Chicago, '03. This pen is pure Bradley Bros. strain. Yard No. 2, headed by two-year-old cock, full brother to first pen cockerel at Madison Square Garden, N. Y., 1904; pen is Bradley Bros. strain. Yard No. 3 headed by the best son of cock in yard 2.

Pullet matings: Yard No. 4 headed by the best son of the great pullet breeding cock Milo. This pen is pure E. L. Miles strain. Yard 5 headed by fine large cockerel of the proper color for pullet matings. This pen is pure Bradley Bros. strain. Yard No. 6 is old Milo with five fine large pullets; E. L. Miles strain.

Eggs \$3.00 per 15, \$5.00 per 30.

L. H. EDWARDS

R. R. 1, Owasco, Ind.

HOUDANS!

For more than thirty-one years Rigg's strain of Houdans has been the acknowledged standard of Houdan excellence by all Houdan breeders and exhibitors at ALL the leading shows of New York, Boston, etc., have drawn largely upon this strain. The record made by the Rigg strain during all these years has never been approached by any breeder.

Mr. Thos. F. Rigg, Iowa Falls, Iowa,

Driftwood Farm, Girdletree, Md., Dec. 17, 1904.

Dear Sir:—In 1898 I obtained in Colorado three Houdans that were purchased of you. I took them to Brazil, where they were practically unbeaten by the best English strains, to say nothing of breeding a lot of youngsters that hustled their Minorcas in egg production.

WALDO KENNARD.

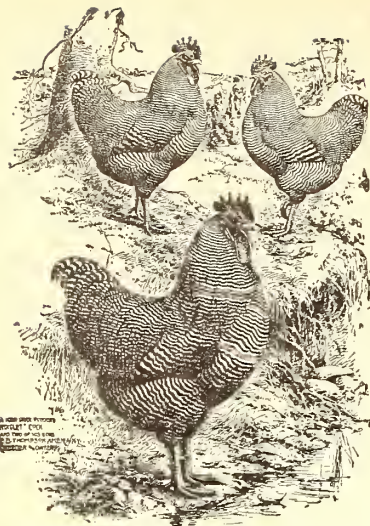

This is the kind YOU want—the large, vigorous, egg-producing, show winning kind. More than 31 years of careful, systematic, line-breeding has given us this magnificent strain of Houdans.

EGGS FOR HATCHING THAT WILL PRODUCE SUCH STOCK

We have no special pens in reserve for ourselves and other pens for our customers. The same pens that supply us with our many winners and magnificent breeding birds, supply our customers with eggs. Price of eggs \$3 per setting, two settings \$5.

THOS. F. RIGG

IOWA FALLS, IOWA

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup, presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

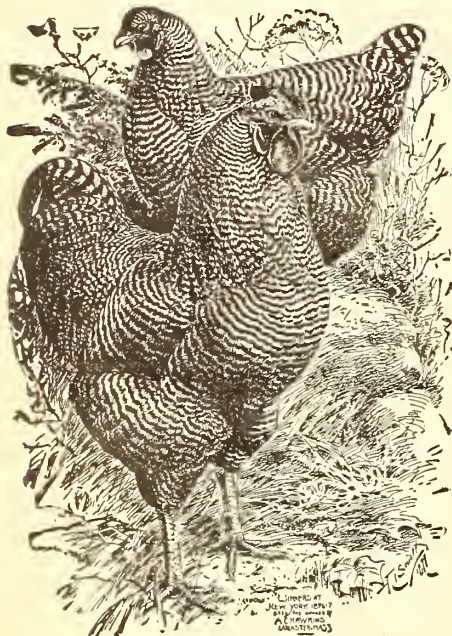

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

Per 100, \$20.00.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned. * * * * *

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes on 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at Boston, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at Honest Prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

NOTICE **BUFF WYANDOTTE BREEDERS**

It is with pleasure and pride that we announce our matings for this season as the best we ever owned, and we believe far excel any ever made before. These matings include our Chicago and World's Fair winners. If your stock does not satisfy you—if you need new blood, this is your opportunity to get the best for little money. Fifteen EGGS \$5.00. These are from the BEST strains of

...BUFF WYANDOTTES...

A strain that has repeatedly proven its worth at the big shows in hottest competition. Book your order to-day. Ours is a laying strain.

IT IS A FACT

that poultry pays a larger profit for the money invested than any other business; that anybody may make a success of it without long training or previous experience; that the Reliable Incubators and Brooders will give the best results in all cases. Our 20th Century Poultry Book tells just why, and a hundred other things you should know. We mail the book for 10 cents. Write to-day. We have 115 yards of thoroughbred poultry. BELIEVABLE INCUBATOR & BROODER CO., Box A-1 Quincy, Ill.

Save Your Chicks

2-lb Package 25 cents
F. O. B.

BUCKEYE CHICK STARTER

Anywhere by express prepaid, 50 cents

Do you have trouble raising your chicks to maturity? If so, the damage is done the first week after hatching. One 25 cent package of Buckeye Chick Starter will start on the road to health and development twenty-five chicks and is everything they need, or should have, except water, for the first week or ten days. Try it and change a loss into profit. We manufacture the Best Balanced Ration in the United States. Our catalogue on Foods and Feeding is invaluable and is yours for asking.

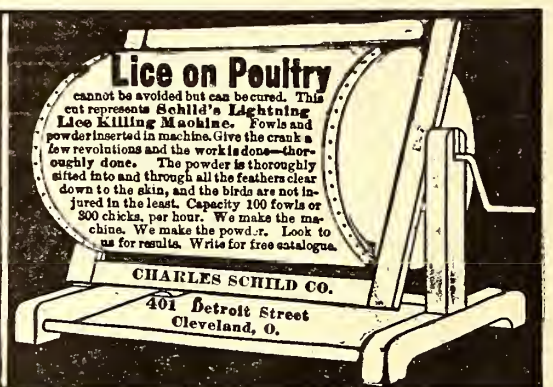

BUCKEYE INCUBATOR CO.

Box 2, Springfield, Ohio

**"Fine Feathers
Make Fine Birds."**

Our poultry his prevents birds from plucking out their feathers. Easily attached, cheap, does the work. In no way interferes with feeding. Write for particulars.

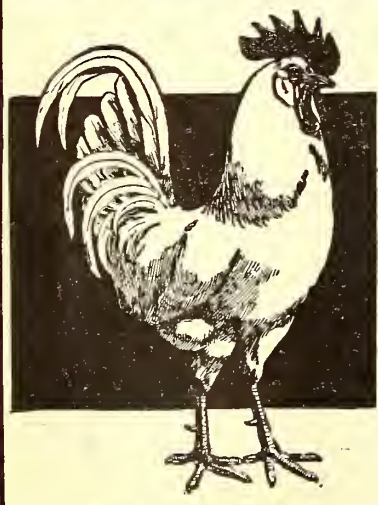

Lice on Poultry

cannot be avoided but can be cured. This cut represents Schild's Lightning Lice Killing Machine. Fowls and powder inserted in machine. Give the crank a few revolutions and the work is done—thoroughly done. The powder is thoroughly sifted into and through all the feathers clear down to the skin, and the birds are not injured in the least. Capacity 100 fowls or 300 chicks, per hour. We make the machine. We make the powder. Look to us for results. Write for free catalogue.

401 Detroit Street
Cleveland, O.

We Can Teach You How to RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

THERE IS HARDLY A MAIL

but new evidence comes up that the results of

DUSTON'S

careful and painstaking breeding during the past dozen years or more is helping even the most prominent breeders. For it brings home the fact that my customers, who have bought their

WHITE WYANDOTTES

direct, not only sell their eggs to these breeders to fill their order with, but that they hatch them for their own pens as well. Verily the truth grows—that Duston is the breeder that has made possible the "World's Best" flocks. Stock and eggs from headquarters is what you want. Send your wants to

ARTHUR G. DUSTON

Box 1020,

So. Framingham, Mass.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

Also highest honors at Madison Square Garden, Philadelphia, Pan-American Bagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

THE VICTOR BOOK

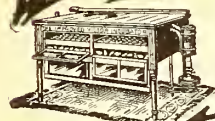

will be gladly sent you—free.

It tells how to make money out of eggs, chicks and fattened fowls. There is no business in which there is greater profits. Our book aims to start you right.

It tells, too, about our Victor Incubators and Brooders, the machines used by thousands of successful poultrymen. They are made from carefully selected and seasoned lumber. We put a good, honest weight of copper into the tanks and boilers. The principle is scientifically correct. When you buy a Victor you get incubator satisfaction. Write us to-day. Just say "Send the Victor Book." A postal will do.

MODEL

Incubators and Brooders

the best at all seasons, are especially superior for late spring and summer hatching and rearing. Warm-weather chickens are profitable because at this season they can be reared with the least trouble and expense.

June hatched pullets, if kept growing, lay in December.

Summer hatched cockerels, if caponized, bring good prices in winter and spring.

The way to make money with your plant is to keep it running twelve months each year.

The Model Incubators and Brooders furnish you with the best equipment—the equipment which the large breeders are using to make money.

If you are using the old Cyphers, and do not want to go to the expense of buying new machines, why not have them remodeled? **The Crystal Springs Duck Farm is using 26 No. 3 and 7 No. 4 Models, and March 10th I remodeled their 49 No. 3 Cyphers, originally manufactured by the Cyphers Incubator Co., putting in my new thermostats and ventilating system. They are using 67 of my No. 4's at Yardley; Truslow is using 50; Earl Stock Farm 36, Wilson is using 72 No. 3 Models and the Lakewood Farm 19.** If you wish any better testimonial of the Model's worth, note my competitor's desperate efforts at imitation.

I have still thirty Cyphers Incubators, manufactured by the Cyphers Incubator Co., which are now in my factory. These machines I have remodeled with the Model thermostat and ventilating system. They should have arrived a month ago, and rather than carry them over summer I will sell them at a sacrifice.

PROGRESS

The Model Mill and the Model Poultry Foods

To satisfy the demand made upon me by my customers to supply them with poultry foods, I have availed myself of the first opportunity to secure a suitable milling property.

I have recently purchased a five-story, heavy mill-constructed building, centrally located for shipping, and having switching facilities to all the trunk-line roads. I have installed a full line of up-to-date cleaning and milling machinery, and am now prepared to offer strictly high-class poultry foods, made from clean, wholesome grains. My aim is to make the *best foods* that can be made for the particular purpose each is intended.

None but sweet and wholesome grains are used in the manufacture of the Model Foods. The large grains are first cleaned, to remove all foreign matter. They are then passed to the mills to be cracked to a suitable fineness, and from there to the

screens to be graded into the three sizes for nursery, growing and scratching foods. From the graders they are passed to the scouring or pearling machines, which remove all the loose particles of bran or flour, and rub off the rough corners and edges, which otherwise would flour in the bag during shipment. The result of this careful manipulation is that *you buy what the chick will eat up clean, and there is no flour or other substance to be wasted.*

Each bag of either the nursery, growing or scratching food contains a separate bag of Meat Food. No grain ration alone will raise chicks successfully, i. e., make bone and feathers, and put on weight at the same time. The Meat Food is to be hopper fed, so the chicks may go to it at all times.

No grit is contained in any of the Model Poultry Foods. You can buy this separate for less money.

A PLEA FOR MORE SIMPLICITY.

The Common and Stable Grains of the Farm Contain all the Elements Necessary to Growth and Development of the Young Stock. Use of the Self-feeding Hopper is Recommended where the Chicks Have Range.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

A majority of the season's hatch of chicks are now far enough advanced to make the feeding of something else besides the more popular chick feed a necessity. The welfare of the stock demands that a change in the food supply be made at this time.

It may seem to many that the subject of how to feed and what to feed the growing stock is a threadbare tale, oft told and without interest. That the tale as often told has become a very familiar and therefore uninteresting story is true. But this is a most important matter.

How and what best to supply the growing stock as food depends entirely upon the condition under which the stock is kept. It is by not properly considering this fact, and failing to make a proper analysis of conditions as well as food supplies, that many breeds are wrongly feeding or not feeding to the best advantage.

My neighbor and I, breeding the same variety of poultry, can not handle or feed our stock alike. Conditions are radically different. His yards are small and bare of all vegetation. The chicks must be supplied by him with everything they eat. Every blade of grass must be carried to them. In his neighbor's yards conditions are the reverse. The yards are large and carpeted with a blue grass sod. The range is practically unlimited, consisting of orchard and clover field.

In order to succeed these two breeders must care for their stock along entirely different lines. And as these places are representative of perhaps a majority of the places where standard bred poultry is reared in America, let us consider how best each can feed and handle the young stock.

It should be understood that the handling and housing of the stock is just as important as the feeding of the same. And yet how many breeders are supplied with good brood coops? Very few, comparatively. Too many do not realize the importance of good brood coops. Chicks that are hatched in March and April by hens, in a large portion of the country are, as a rule, placed outdoors in brood coops. And it is during the cold, rainy, changeable weather that in most cases there is a considerable loss of chicks. There are days during the early spring that are warm and it is best to allow the chicks to get on the ground. In fact we have learned by experience that board floors in the brood coop run-ways are detrimental to the health of the chicks. After years' careful study we have adopted a brood coop that satisfies us fully.

This coop is 4 feet 6 inches wide, 2 feet deep, and 1 foot 6 inches high in front, and 1 foot 3 inches high in rear. It has two compartments. The house part, closed, or 1 foot 9 inches by 2 feet. The exercise room occupies the rest of the space. The exercise room is closed at the end and screened with one inch wire mesh. The house part, in which the mother hen is confined, is supplied with a movable floor. The chicks can run at will from the hen into the exercise room.

Some of the advantages of this brood coop: It is vermin proof; at night no animal can enter this coop.

We have the hen and chicks under perfect control. In the exercise room we keep a constant supply of beef scraps, grit and charcoal at all times. The hen can not get to these supplies. She is fed cheaper food than that given the chicks. In

this room after the first two weeks we keep a supply of chick food. The chicks can go to it at will. This is in direct contradiction to the methods pursued by many breeders and will not be endorsed for one moment by the large majority of writers who find it has become a habit to cry loudly the creed—don't overfeed, keep the chicks at work scratching for all the food they consume. But we do not do it that way. Experience has taught us better. By our method there is no struggling of the weaker to secure their food supply. The chicks will not overeat when so handled. They will eat often and little at a time. When liberated in the early morning they are as lively as crickets and are off over the range in search of worms and insects. They do not return frequently to the brood coop and "stand around the food bin" as has been said of them by one noted writer, who, we are very sure, has never tried this system of feeding. We know, not think, but know, that chicks so handled will consume less grain food than a given number will if fed from hand in the usual way. How do we know this? We have the figures to give the truth of this statement. For two seasons we kept a complete record, half of our young stock being handled on the food-at-will plan, the others in the customary way. Another point: When the food supply is before the chicks constantly they eat but little at a time. There is no gorging as there is when food is given in the old way. As a result the digestive organs of the chicks are in better condition. The chicks will balance their rations. Nature will attend to that.

This is the ideal way, it seems to us, to rear the chicks where they can be given a grass range. But it would not do at all for the city or town breeder who has barren yards and where the chicks must be raised in comfort. We can see readily that in such a case the chicks would be very liable to overfeed, for they would not be given the exercise secured by the range chicks in their rambles over the range. Here the food supply must be carefully studied and the handling requires great skill.

As to other advantages of such a brood coop. In this coop the sanitary conditions are perfect. The exercise room has no floor other than the ground. This earth floor is kept perfectly dry, so far as effect of rain is concerned, by a shallow trench being dug, carrying away all surface water. The coop is large and well ventilated and dry at all times. In due time a perch can be placed in the exercise room.

So much for the character of the brood coop which is serviceable alike to the breeder who can give the young stock range and the breeder who must keep his chicks confined in small yards. The system here outlined for the person who is fortunate to have a good range is one we can advise all such to adopt, notwithstanding it is so vigorously opposed by the large majority of accepted authorities.

* * * * *

There is altogether too much theory advanced in the advice given to breeders of poultry as to what to feed the chicks and how to feed them. A nice hatch chick—one from healthy, vigorous parents, is a creature of nature which is bound to live if given the chance. We must bear in mind that our handling and rearing of fowls must of necessity be largely artificial. The cry of "get close to nature" in the bringing up of our chicks is too often a mistaken one. If the conditions surrounding the chicks were as nature would have it in providing for her own we could then feed as nature would. But such is not the condition. We must meet the condition.

Another matter: It has become of late the accepted belief that the growing stock as well as the matured fowls must be given a great variety of grains and foods. The man who is putting a food upon the market makes the fact very prominent that his food contains a great variety of grains. One manufacturer outdoing all others, and no doubt believing he will lead for some time, announces that the food he is offering contains 28 different grains and seeds. Then he works in the "get

near to nature" theory, and tells how the wild fowls are so bountifully supplied with 28 or more different kinds of seeds, etc.

This is all nonsense. Nature never supplied her fowls and birds with wheat and oats and corn and barley, the best foods we can possibly give our chicks or our fowls. There are a hundred and one different seeds which the wild fowls must consume in order to exist that are absolutely worthless in the poultry yard.

* * * * *

The breeder who has a range for the young stock need not spend his time nor money on food-theory rainbows. The best and cheapest food supply is near his hands, within easy reach.

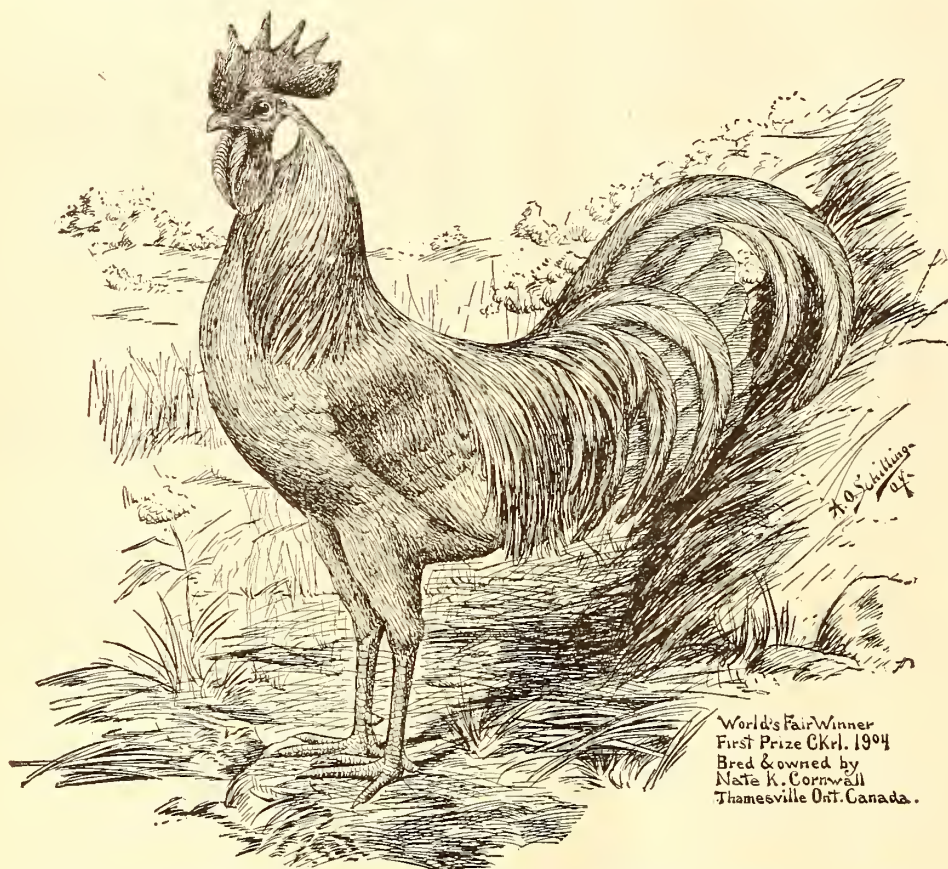

Let us take oats, wheat, corn, barley and millet. These grains are always upon the market at prices seldom out of reach. These grains fed judiciously answer every requirement. In addition supply the stock with beef scraps, grit and charcoal,

sanitary conditions. Let there be no mistake as to this.

We realize that by nature a chick is very active. Idleness is foreign to its nature. Therefore it would be unwise for this breeder to place self-feeding hoppers bountifully supplied before the chicks. Instead he should have roofed pens where the chicks may secure their food supply by work. They must have this exercise and in small yards this is the best way to supply it.

But here too, there need not be the great variety of foods now so much advised. It should be kept in mind that chicks thus confined can not as well digest food as those kept on the range, and the corn should not be fed whole, but should be cracked. The barley should be soaked in water for twelve hours before feeding.

The idea is that we wish to take away as much as we can of the belief now being fixed in the minds of poultry breeders that chick life is so complex that one must be a chemist, a botanist,

World's Fair Winner
First Prize CKrl. 1904
Bred & owned by
Nate K. Cornwall
Thamesville Ont. Canada.

1st S. C. Buff Leghorn Cockerel, Louisiana Purchase Exposition, 1904. Canada's best Buff Leghorn, the only strain that has bred and exhibited 1st Cockerel at two World's Fairs. Nate K. Cornwall, Thamesville, Ont., Can.

in self-feeding hoppers and the chicks will find a perfect food supply.

Judgment in feeding is as essential to success as in the character of the food supply. Oats are strong in bone and muscle making elements. Corn in limited quantity is needed to supply the elements necessary to best growth and development.

With proper cooping and care chicks will grow and develop with such a food ration—grow and develop properly. Upon the range they will secure all needed exercise.

Now as to the breeder who is rearing his chicks in small barren yards. Such a breeder must be a thinker, a student if he is to succeed. He has created a condition which is almost wholly artificial. He must give thought to problems which do not confront the breeder with grass fields as range. He must supply not only food but means of exercise for the chicks. He must give especial care to the sanitary conditions of his coops and yards, and the first and most important matter is that of

an all wise man in order to successfully rear chicks—must bring to them feed boxes, rare and expensive grains and other foods. It is not true. The common farm grains, comparatively cheap in price and always at hand, are all that is necessary. And this is true as to the food supply of the laying and breeding stock.

THOS. F. RIGG.

The British market calls for eggs that will weigh 1½ pounds to the dozen. Those engaged in the import trade believe that in large eggs the albumen is thicker than in small ones, and that about 90 per cent of the stale or bad eggs are small eggs with white shells. Shells of a brown color are preferred, and must be clean without having been cleaned.

According to the claims of cold storage men, brown-shelled eggs keep better than white-shelled ones, as they are heavier and thicker.

KANSAS STATE LAYING CONTEST.

Report of the First Six Months of the Laying Contest
Conducted by the Kansas White Wyandotte Club.

This contest was arranged by the Kansas White Wyandotte Club and opened Nov. 1, 1904, with seven pens (42 birds) competing.

The first half of the contest closed May 1, 1905, with the pens in the following position:

Third—Buff Wyandottes.

White Wyandottes.

Single Comb White Leghorns.

Barred Plymouth Rocks.

Light Brahmas.

In starting a test of this kind conditions are always present unfavorable to egg production, such as transportation of fowls, their strange new quarters, etc. The house in which the birds spent the winter is of the curtain front style with a large amount of curtain surface, as it was built for a larger number of birds per pen than was furnished by the club. The winter was the most severe ever known in the state, with long continued cold and temperature as low as 30 degrees below zero, and with so few birds in a pen it is hardly necessary to say that egg production was diminished.

While the conditions were unfavorable in this particular yet the fowls have made an excellent laying record and the results compare favorably with those obtained in previous authentic egg laying contests.

The first pen, Rose Comb Rhode Island Reds, are owned by Dr. J. Martin, Wichita, Kansas. These pullets were laying when shipped to the college, being the only ones laying at that time. They laid heavily until Jan. 1, 1905, when several of them molted and stopped laying. They are more inclined to broodiness than any other breed in the contest.

The second pen, Rose Comb White Leghorns, are owned by Mrs. Jennie E. Warren, Cottonwood Falls, Kansas. These were fairly well matured pullets. They seemed rather out of condition at first but recovered and gave excellent results through the winter. They were not affected by the low temperature so much as their single comb cousins. No. 25 of this pen "went light" in February, died in March and was replaced by No. 89 on April 5, 1905.

The third pen, Buff Wyandottes, are owned by G. C. Wheeler, Harlem, Mo., formerly of the station staff. These pullets have done well up to the present, ranking their white cousins.

The fourth pen, White Wyandottes, are owned by Beecher & Beecher, Belleville, Kans. These pullets were in prime condition up to the present. One of their number, 4c11, holds the record so far, as an individual.

The fifth pen, Single Comb White Leghorns, are owned by the Kansas State Agricultural College. These pullets did well but suffered more than any other variety from the severe cold.

ROSE COMB WHITE LEGHORNS.

First Cockerel, St. Louis World's Fair, 1904. First hen Madison Square Garden, New York, and at Chicago, December, 1904. Bred and exhibited by Rocky River Poultry Company, 5931 Superior St., Chicago, Ill.

No. 60 suddenly died April 17, 1905, and was immediately replaced by No. 7.

The sixth pen, Barred Plymouth Rocks, are owned by Mrs. J. B. Jones, Abilene, Kansas. This pen consists of hens while the other pens entered are pullets. This was due to an unfortunate misunderstanding and is manifestly unfair to the breed, as hens are generally conceded to be poorer winter layers than pullets. These hens were further handicapped by their incomplete molt. They are inclined to overfatness and are heavy eaters.

The seventh pen, Light Brahmas, are owned by F. A. Brown, Onaga, Kansas. These birds were in the best of condition up to the present time. Their small egg-production early in the season must be explained by the fact that they are a slow maturing breed. In this pen and, in fact, all the pens excepting Leghorns, the egg yield fell off in April, due to broodiness. All broody hens were promptly removed to a strange pen which seemed to break up this condition, and in ten days were again ready for laying.

The accompanying table gives the egg yield and its value and the cost of feed figured on local markets. At the close of the year more complete results, including the broody periods, molt, fertility of eggs, etc., will be published. A study of the table will reveal a surprising difference in the individuality of the hens. This contest should prove much more interesting and instructive than previous ones where no record was kept of the individual performance.

Yours for "Better Birds for Kansas,"

BEECHER & BEECHER.

MR. DUDLEY REPLIES TO DR. CRANSHAW

Editor AMERICAN POULTRY JOURNAL.

I am going to ask you to again allow me to trespass upon your time and patience, and to allow me the use of some of your valuable space in which to set down a few thoughts in regard to the subject upon which Dr. Crawshaw and I have had quite a wordy argument. Not that I feel that I want to have the last word, or anything of that sort, or that I wish to notice particularly the personal things said of me by the doctor in the May number of the AMERICAN POULTRY JOURNAL, but I feel that there is more in this subject than has been brought out and feel that entire justice has not been done the question under discussion. In his article above referred to, Dr. Crawshaw says that I have lamentably failed to hit the mark in my article in the April number. Now, if the gentleman claims he has hit the mark in his communication of May, it must be that I personally am the mark at which he aimed, and I will easily allow that the doctor hit that mark.

I could reply to him in the same strain, but do not think the readers of this paper care anything about a personal controversy between the doctor and myself, and I trust he will

to ask the doctor a little more about his experience, of which he wrote. Judging from his article, he only keeps fifteen hens, at least that is all he mentions, or gives record of, and if I am correct in my assumption and fifteen hens is the magnificent proportions of his poultry business, I do not wonder that by being a busy and ambitious man, he finds time to take care of them in his approved and up-to-date methods. But if the gentleman was obliged to take care of a hundred or two, I question if he would not change his tune a little and cut out some of the unessentials, which now he seems to think so necessary for the comfort of the hen. The word comfort, brings to my mind a few questions about the real comfort, if any, to the hen, in warming her drinking water. Take a pail of warmed water and a pail of reasonably cold water, not ice water, by any means, but water just as it is drawn from a well, and place both before a hen and see if she isn't just as likely to drink her fill of the cold as of the warm. My own hens would almost invariably leave the warm water for the cold, and wherein, then, comes the real comfort to the hen in warming the water for her. Really, the vital point of discussion between us lies in the fact that the doctor, judging from his article, seems to think all this care and attention is *necessary* to produce the results with which he has favored us, wherein I claim that he could have arrived at the same

EXHIBITION PEN COLUMBIAN WYANDOTTES.

Bred and owned by Dr. C. J. Andrus, Canandaigua, N. Y. First prize pen at Madison Square Garden, New York, 1905.

kindly remember, in this discussion, that it is not what he says of me that counts, but what he says (and proves) against the system I advocate.

In regard to this side of the question I fail to see wherein the gentleman has proved anything for his case. That he may get desirable results from his manner of caring for fowls does not prove in the slightest that he could not get exactly as good results by a different method. What I said, and still say, is that it would be better for the average poultryman to adopt a simpler method than the plan advocated by the doctor.

In writing my first article on this subject, I wrote for the eye of the poultryman who keeps hens on a business basis, and to make money from, and not for he who keeps them for the pleasure and diversion of taking care of them, as one might be led to believe the doctor does. I will further ask the gentleman to remember that it is not the flock of fowls upon which is lavished the most extravagant care and attention, which necessarily pays the best, but the one which, other things being equal, gives the best results with the least amount of time and labor expended.

Although I do not wish to make any personal remarks in this article, where it is possible to avoid it, still I would like

results with just one-half the time and labor involved, and if the average poultry keeper today, he who gets a living from his hens, had to go through all this rigamarole of feeding and watering, he would be obliged to go out of the business for lack of time to take care of fowls enough to make a living. I am sure I would not, for a moment, ask the doctor to forego the pleasure of taking care of his fowls in his approved ways, but I will leave it to the judgment of the intelligent readers of this paper to say whether they think it necessary for them to follow his plan in order to get like results.

The pernicious part of such writings as the original article by the doctor, lies in the effect it has on the mind of the inexperienced keeper of poultry, who, by reading it, is led to believe that it is all necessary, and by spending their time and labor in this way, when they should be doing other important work, lose the benefits and profits to be derived from keeping fowls in a common sense manner. It is a noticeable fact that throughout the poultry world the tendency among poultry-keepers in general, is to reduce the labor, to use extensive, instead of intensive, methods. A great many of the teachings of the poultry journals are along that same line, and it is a move in the right direction, for nearly everywhere land is cheaper than labor. Land has to be bought but once,

but labor has to be bought every day. And, really, the doctor's opinion to the contrary notwithstanding, this is nearer following nature's plan than the methods outlined by him. He seems to think that because he has given us the report of a good three months' egg yield and brought out one good hatch of chickens that his argument in regard to pampering stock is final and conclusive, but he must remember that the evil effects of too careful keeping, or mismanagement of any kind, do not necessarily show themselves at once, and that some people have gone along swimmingly on a very bad method, to later be brought up with a round turn, when it is impossible to remedy the evil without considerable loss.

To cite an instance to show that it is not altogether careful feeding and attention that makes hens profitable, I will mention a case of a party with whom I was acquainted, who kept hens for several years on a novel and labor-saving method, and who, apparently, got good paying results from it. This gentleman had a large pasture upon which his fowls were allowed free range, and their sole diet in summer consisted of cracked corn, fed in hoppers *ad libitum*, with plenty of fresh water in a little brook that ran through the field. In the winter he added a hopper of beef scraps to the menu and dipped a pail of water out of the brook daily, and set it in the henhouse. Not an ideal ration or a great deal of labor expended, and yet this man's hens always looked bright, healthy and comfortable, and he got a good average egg yield. This man followed this plan, I believe, as long as he lived, with satisfactory results. Now, I couldn't be successful by doing as this man did, and it goes to prove that, in a way, he was the better poultryman of the two, that the man who could make a satisfactory profit from such a system (or lack of it), was a better poultryman than the man who has to spend a good part of his time with his hens in order to get a profit from them. I expect I shall get my ear twiggled in good earnest by other people as well as Dr. Crawshaw, for giving utterance to such an expression, but I believe there is more in this phase of the question than some people have ever considered. I remember reading, a year or so ago, a series of articles in a prominent poultry journal on the hatching and raising of chicks, and the first prize of five dollars was awarded to a person who hatched out and raised thirty-five chickens, by the expenditure of at least from two to three hours a day, feeding and watering and cleaning the coops, etc. I notice that such details as cleaning the coop was attended to every day and drinking water removed and fresh substituted as often as it became at all soiled. Now, to my thinking, giving the prize to such a person as that was all wrong, because there was no business principles followed in the method, from first to last, nothing which a person who is raising large numbers of chickens for profit, could copy, with any benefit to himself, and, although the chicks raised so carefully were no doubt good ones, they were arised at too great an expenditure of time and labor to be profitable. The same labor and intelligent care exercised over four or five times the number, would have shown a more profitable result at the end of the season.

Remembering that a person undoubtedly learns a good deal from those whose ideas differ from their own, I hope that this little argument of ours may have been the means of planting some little grain of thought, for good, either in our own minds or in the mind of some one of the many readers of this valuable journal.

Kendal Green, Mass.

ALVIN D. DUDLEY,

THE HAMBURG FOWL.

In these days when White Wyandottes, the different varieties of Rocks and the new breed, the Orpington, are so much the rage among fanciers, the old standard breeds are apt to be lost sight of in a desire to combine in the one fowl a good egg and meat producer. It is a well known fact among breeders that this cannot be attained, that the one quality has to be sacrificed to gain the other. Knowing this to be a fact, the writer desiring a breed that was the greatest egg producer and at the same time a handsome and hardy fowl, selected the Black Hamburg as the one combining these qualities, and were they better known would be bred in greater numbers, as they are a veritable egg machine, and as for beauty, no black fowl in the Standard can surpass them. The Hamburg breed was introduced into England from Holland, or North Germany, and eventually took the name of the noted seaport, Hamourg, although at that time and for many years after their introduction into Great Britain, they were known as the "Dutch Every Day Layers." In all probability, up to the poultry show era in England, none of the varieties now so designated, bore the name Hamburg, and previous to that time, the Blacks had been known as Black

Pheasants, being finally named Black Hamburgs at the great Birmingham show. They are beautiful, symmetrical and stylish in carriage. They have been much improved in the beauty and uniformity of plumage since the era of poultry exhibits, but not in productiveness, as that is hardly possible, for they have long maintained the reputation of being "every day layers." Birds of the Hamburg family are of only medium size, but their deficiency in size is more than made up for by their fecundity. Both sexes exhibit such glossy and elegantly marked plumage that they are looked upon as special favorites wherever shown or cultivated, and when well bred, are truly ornamental, possessing fancy points that render them pleasing to those who desire to keep a fowl that will furnish plenty of eggs and also be a gratification to the eye. For table use, though small, they are very good. Their flesh is tender, with little offal, having a larger proportion of the dressed weight in flesh, from the delicate structure of the skeleton, and is fine in quality. Among black fowls there is no richer color than that possessed by the Hamburg, the elegant beetle green in neck, back, wing bows and tail coverts on both male and female, is not quite equaled in any other black fowl, and it is characteristic of this fowl that they invariably breed true to color and shape. The writer has bred Black Hamburgs exclusively since 1882. When one considers the good qualities which this variety possesses, it is surprising that so few entries have been made at the poultry exhibits. It is the hope of the writer that this article may have the effect of creating a greater interest in this splendid variety of the Hamburg family, that at our future shows a greater number of exhibits may be found, and the Black Hamburg will again resume its proper place among the important breeds of poultry.

RICHARD L. CRONDER.

The Hamburg is a fowl that, if only better known, would be much oftener found in the yards of those who keep poultry for profit. As chicks they are easily raised, feathering quickly and maturing very rapidly, and will begin to lay when about five months old. They are prolific layers of a good sized egg, and being non-setters, are almost continuous layers. Being small in size the Hamburg does not rank high as a table fowl, but although small, they are very plump and their flesh is beautifully white and very delicate. The black variety is a very beautiful bird, their plumage being of a rich greenish black throughout, and are as pretty a fowl as can be seen. They are a very active fowl, but will stand confinement as well as most any other variety.

As a show bird the Black Hamburg has always been a favorite, as they can be shown with very little trouble, being always clean, at least they don't show dirt.

Back in 1876 and 1877 the Hamburgs were bred very extensively in this country, and at that time were among the leading varieties, but of late years have been crowded into the background by the larger breeds, but at the present time there are a goodly number of Hamburg breeders, who devote their time and attention to this very meritorious fowl.

The Silver Spangled and Silver Penciled Hamburgs are both very handsome varieties, and of late years the Silver Spangled have led the other varieties in popularity. We cannot say why this is so, but it is a fact nevertheless. The breeders and admirers of the Hamburgs should by united effort endeavor to bring their favorites up to the high plane which they are entitled to. They are easy to breed true to standard requirements, and are very hardy; easy feeders and nothing can be more pleasing to the eye than a nice flock of well-bred Hamburgs.

Without doubt the most handsome fowl of all the small varieties is the Silver Penciled Hamburg. But few of these handsome birds are seen in the show rooms in this country, but in England, where they are bred very extensively, no show is complete without a large display of these very pretty birds. They are good layers of a fair sized egg and, although of small size, the meat is very fine in flavor.—Ed.]

First and second-class poultry should never be packed together. In such a case they are all rated at the second-class price. Males and females must never be in the same package, or rather, mixed. Thin stock and that which is well fattened should be by itself and the contents and grade be marked on the outside of the box. Ship in packages weighing from 100 to 200 pounds. Before packing line the inside of the boxes with paper and place clean paper between the layers, and several thicknesses on top. Pack tightly and full up to the top, so that they cannot shuffle about on the way and become bruised. Ship to a reliable commission house, write plainly on the outside of the box the contents, weight, address of the firm shipped to, as well as the name and address of the shipper.

SYSTEMATIC RECORD KEEPING.

In all branches of business we find that to obtain the best results it is necessary to keep accurate records of all business transactions. The system of bookkeeping has solved this problem for the merchant, but the system of bookkeeping which is in use by all merchants, does not, and can not, fill the bill completely for those engaged in the poultry business. There is no other line of business that requires more thorough and systematic record-keeping than does the poultry business, where the best results are to be obtained. I think I would be almost safe in saying that there are almost as many different systems of record-keeping as there are breeders that keep records of their business. I do not think that all breeders could adopt the same system of record-keeping successfully because some will go into the fancy, others will run egg farms and others broiler plants, etc. Every season there are hundreds who make their first purchase of eggs, or stock, from the different standard breeds of fowl. Many of these new beginners are practically strangers to the business, and would probably appreciate any thoughts from others that may be of use to them. It is to this end that I will try and give to the readers of the AMERICAN POULTRY JOURNAL my system of systematic record-keeping. I do not wish to dictate to any breeder what system of record-keeping he should adopt, but would emphatically say adopt some system of record-keeping. In order to explain my system of record-keeping intelligently I will take it up in sections, namely: First, the individual pedigree record of each bird. Second, the individual egg record of each hen, or pullet, in the breeding yards. Third, show records. Fourth, records of all sales of eggs for hatching, and stock sold for breeding purposes. Fifth, a record of all expenditures, and receipts for the year. I use a book that is lined only one way. Then you see I can line it to suit myself. After I keep one year's records in a book I enter up a new book for the following year.

The following is a blank for the individual pedigree record of a bird. I record the name and leg band number of the bird, giving its sire and dam. Then below I have a duplicate of the score card, in which I record the outs. I do not breed Barred Plymouth Rocks, but will record one here to show just how I fill out the record. This system of pedigree record-keeping makes it a very easy matter to trace back the markings of the ancestors as far back as the records have been kept:

Date of sale or purchase	To whom sold or of whom purchased	No. of eggs	No. of birds	Eggs		Cock		Cockerel		Hen	Pullet	Leg Band No.
				Sold	Bought	Sold	Bought	Sold	Bought			

Name and No. Violet No. 5684. Sire King B. No. 3652; Dam Princess No. 65.

Breed, B. P. Rock. Sex, Pullet. Band No. 5684. Weight 7½.

Entry.	Shape.	Color.	Remarks.
Typical Carriage	½	..	
Weight	..	..	
Head	..	..	
Eyes	..	½	
Beak	..	½	
Comb	1½	..	
Lobes and wattles.....	..	..	
Neck	..	¾	
Back	½	½	
Tail	¾	¾	
Wings	..	¾	
Breast	½	½	
Body and fluff.....	..	½	
Legs and feet.....	..	..	
Hardness of feathers....	..	..	

Outs 8½. Score 91½.

Next will be my plan of individual egg record of each hen in the breeding yards. In connection with this egg record which I keep in the Pedigree Record Book, I make a calendar for each hen say beginning the first of October, 1904, ending October 1, 1905, which I tack up in the hen house. I put the number of the hen's leg band on the calendar. When I take a hen out of the trap nest I make a mark over the date on which the eggs were laid. At the end of each month I tear the leaves off of the calendars for the past month, count up the number of eggs laid during the month, and record same in

the individual record. In this record I have an accurate account of all eggs set, eggs broken in nest, infertile eggs, etc. One cannot realize the full benefit of this record unless they keep it awhile.

VIOLET NO. 5684.

Egg Record.

Date.	Eggs laid.	Eggs set.	Eggs broken.	Infertile.	Eggs hatched.	Date of hatch.
Oct. 1904 ...	..	..	..	..	..	..
Nov. 1904 ...	9	..	..	..	..	..
Dec. 1904 ...	18 15	Dec. 30.	1	3	11	Jan. 19.
Jan. 1905 ...	..	..	..	..	..	..
Feb. 1905 ...	..	..	..	..	..	..
Mar. 1905 ...	..	..	..	..	..	..
Apr. 1905 ...	..	..	..	..	..	..
May 1905 ...	..	..	..	..	..	..
June 1905 ...	..	..	..	..	..	..
July 1905 ...	..	..	..	..	..	..
Aug. 1905 ...	..	..	..	..	..	..
Sept. 1905 ...	..	..	..	..	..	..

My plan of show records is as follows: This record is not, as necessary as the other records, but it is helpful and well worth keeping.

SHOW RECORD.

September 1, 1904,

to

September 1, 1905.

DATE	No. of bird	Place of Show	Regular Premiums	No. of birds in class	Amount of Premiums	Pen or Special

Next I will give my plan of keeping record of all eggs sold for hatching, and stock sold for breeding purposes. This record enables me to trace back the date of sale, and name of purchaser, also the number of the bird or birds sold. When I get an order for stock from a breeder who has purchased from me at a previous date I can refer to this record, get the number of the bird; go to the pedigree record book, there I have his number and markings recorded. Also all of his ancestors as far back as the records have been kept. This record enables me to select a bird which will give the desired results more accurately than if I did not know the breeding of the previous stock sold.

Last but not least is a record of all expenditures and receipts of the business. For this record I use an ordinary ledger. I charge the birds up with all the expenses connected with the business and give them credit for all eggs laid, and all stock sold. At the end of each month I foot up the expenses, also the receipts, subtract the expenses from the receipts and I have the net profit for the month. At the end of the year I add up the net receipts for the twelve months, which gives me the net profits for the year. This is a record that should be kept by all breeders. Some may think that it would take a great deal of time to keep so thorough a record as this. Time! it would be, if it were not systematized. Such a record may be kept easily by just a few minutes each evening after supper. There are a great many little things to be looked after in the poultry business. It takes patience! It takes time! But the breeder who has the patience and will take time to tend to the many little details of the business will certainly be richly rewarded.

Pleasantville, Iowa.

BURTON J. HOLT.

Self-shelled eggs are caused generally by a lack of lime in the food. The shells are a lime formation, and if there is not a sufficient amount of that material in the food, the shells will not harden. The trouble has also been traced to indigestion in fowls. An overfat condition, too, will show itself in the nature of the egg when laid. Instances are known where hens frightened or annoyed by dogs have dropped eggs with a soft shell.

Market as soon as the desired weight is obtained.

THE PROCESS OF MOLTING.

Care of Fowls During Molting Period—The Proper Feed and When to Feed it for Best Results.

Molting is a gradual ripening of the feathers, after they have reached maturity, and this process is sometimes so gradual as to be almost imperceptible to the careless observer, it being only noticed by the fading of the lustrous sheen, and a dullness of the whole appearance of the web of the feathers. When fully ripe the oil in the quill has dried out or more properly speaking has been absorbed, the last particle being that at the connection of a tiny nerve center (I don't know what else to call it, for it reminds me of the nerve connection of a tooth at the root) in the end of the quill, leaving the quill dry and pithy inside, it is then that the feather may be said to be fully ripe and ready to drop. It may also be compared to the process of ripening fruit, which when perfectly ripe the connection between it and the body severs and the fruit falls to the ground. The connection between the quill and skin and the feather has nothing else to do but to fall out, but we often see fruit hang on the tree that is ripe and ready to fall, but does not, and the tree seems to have no power of its own to disconnect it. It is then that nature helps it out by sending along a friendly wind to shake it off, and we have read of feathers being stripped from their rightful owners by a cyclone, but this is not nature's process, nor even could it be considered a helping, friendly hand, in an emergency case, but the fowl can and does help itself. You will see them going over their feathers quite often through the molting season and, if you notice carefully, you can see that they are loosening every particle of old dead skin that has dried too far down on the feather. Feathers on the fowl's body are in rows and clusters, and a fowl will go over one section at a time, dressing and oiling and pruning, you might say, for very often they take out a loose feather with their bill. You never find a feather with any pigment or oil in it, unless it has been removed forcibly.

We sometimes think from the fowl's actions that it has an itching similar to that of the new growth of flesh about a healing burn or sore and to make sure that the new growth of feather may have a good start and be started right it is necessary to clear and prepare the new surface for it and that the fowl is doing this when it picks itself so much during the molting season. Of course we may surmise that lice is the all absorbing subject, claiming the fowl's attention, but I hardly think so to any great extent, because a healthy, hustling fowl will keep itself reasonably free from lice.

As for the care of the fowls during the molting season, which always comes in hot weather, we consider shade one of the first essentials and we have always been blessed with an abundance of it in the form of trees and bushes. We don't want the sun to burn and fade the new plumage while it is in its first stages of growth, nor to burn and blister the poor naked backs and wings before the new feathers have time to cover them, so we consider shade as a very important item, the shade of green foliage first, but, if that is not to be had, anything to keep off the burning rays of the sun. For the past two seasons we have had one fowl in a bank hen-house, a sort of semi-cellar cut into the sidehill, the back side walled with rock and the south side boarded up, and although there are plenty of trees for shade outside, the hot winds blow under them and after the hens take their morning ramble on their range they all go back to the hen-house and squat about on the floor through the heat of the day. The house has a solid sand rock floor and through all this dry time it has been damp and cool, not wet, but just sufficient moisture to keep it from being dry like the ground outside.

I had about seventy-five little chicks hatched the Fourth of July. I put them out in the shade under the trees, with their mother hens, but the hens would not stay out. They and the chicks, too, would pant for breath while out, but were as lively as crickets and scampered about, not exactly bug-hunting, but ant-hunting along the walls. About the same time we opened all the gates and turned all the hens together, but they seemed to congregate in one or two rooms along with the early hatched grown-up chicks and we had to separate them again, putting them back in their own yards. One yard opens out into what we call the range, another opens into a large orchard and another in three yards in one, so that they still have plenty of room. Molting fowls will not range as far as at other seasons, unless they are very hungry.

It is easier to tell "what" we feed than "why" we feed it. We give a very little corn, plenty of wheat, oats with what they pick up in the way of bugs and grasshoppers, which are plentiful this season, comprises their daily meal. At night we feed wheat, all they will eat up clean, for a change a full feed of oats occasionally and once in a great while a feed of

corn. We do not feed much in the morning because the mornings are long and cool and they can forage. We feed nothing at noon and they don't seem to need it, unless you have spoiled them to expect noon feed, in which case they will not take the range enough in the mornings for needed exercise. One pen or yard can go to the feed lots and get corn, but I notice they never go up there at noon, only early in the morning. Often before I am up I can hear them go by the house, for the feed lots are on the other side from the house; some of them go there at night, but chickens are easily trained and they expect me to feed them at night, so they wait for it. They have crushed oyster-shells before them all the time, also sand and grit, though this provided by nature, the house being built in a sand rock quarry and another quarry in one of the yards; besides the dirt in front of the house all along for the width of four to ten feet has been scraped away, leaving the bare rock, which crumbles, leaving a fine sand. If I were providing grit for fowls, though, I would get something with sharper edges than sand. It grinds better. We have used the Mica Crystal and also the Wabash limestone; both are good. The oyster-shells we have are a good quality, hard and sharp and serve well the double purpose of furnishing grit and lime.

Plenty of clean water at all times, to be kept as cool as possible, is another essential to the healthy growth of new feathers. We have some of the patent fountains and like them, but a common milk crock is just as good as anything else, when there are no water-fowls to muss up the water, nor little chicks to get in and drown. When we want more water fountains than we have, we make them for temporary use by filling a gallon jar with water, turning a layer-cake pan upside down over it, then holding firmly together with both hands, turn it over quickly and put it on the ground and gently raise one side of the jar and slip a small stone under the edge to keep it tilted up, but the edge of jar must not be higher than the pan or the water will all run out. Crockery ware makes much the best water-vessels in hot weather, but when it comes freezing time, we use tin or galvanized iron. It would seem hardly necessary to say that this water should be set in the shade, yet one season I let some of my fowls out to be raised on the shares, but the party who had them was of the go-a-visiting kind. Go to everything that came along, go early in the morning and stay all day. I went there one day and found no one at home, but thought it was no breach of etiquette, but rather a good business principle to look about the henry, as I had an interest in it. I found that all the water that was left for the poor chickens was in an old greasy, wooden swill pail, so filthy that there was a rim of black dirty grease all about the top edge. It was sitting out in the broiling hot sun where no possible chance for a shade could reach it, neither at morning, noon or night. The bucket was full, but I believe the chickens would have perished for water rather than touch it. There was no excuse for setting it there, only shiftlessness. Did they make a success of the business? No, they did not. We were to have our original number of fowls back at the end of the year with half of the increase. We did not get the original number back and by mutual agreement we took them long before the year was out. We were glad to get back what we did.

We paint our hen roosts occasionally with crude carbolic acid or one of the liquid lice paints. This does away with all mites and cleans up the scaly feet and shanks, leaving them smooth and bright. We have not this year, but have in other years dipped our fowls in a good strong soap suds, with a little coal-oil mixed in, say a teacupful of coal-oil to ten gallons of nice luke warm suds. This rids the fowls of lice, takes out many loose feathers, cleans the skin, which sometimes becomes dirty and scruffy, and puts them in good condition to grow the new crop of feathers.

We have never experimented extensively with the different kinds of food to produce different shades in color of plumage, always being satisfied with our method as outlined above, but we have experimented enough to know that it is extremely difficult to get the required shading in some parts of plumage without materially injuring some other essential part in the color scheme of the whole fowl. We have experimented more with white fowls than with any of the parti-colored varieties. Trying to get a chalk-white plumage would give us more than we liked of a gray iris in the eye or pale feet and shanks, though in the light of after years I believe we got those more by selection and culling than by anything we fed to produce different tints in plumage. Feeding yellow corn to fowls will give yellow feet and shanks, but will also put a creamy tint in the plumage, which deepens in shade on undercollar and underside of wings. Too much sunshue will give brassy backs and hackles. Of late years we have discarded all efforts of special feeding to produce special results; the results did not pay for the efforts. We now give good wholesome food in a variety of grain with as much range as possible, and let nature take its course.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Kansas State Laying Contest.

The report of the first half of the period of this contest which appears elsewhere in this issue makes very interesting reading and furnishes food for thought and study. One of the first things to attract our attention in this report was the great difference in the individuality of the hens. For instance, in the Rhode Island Red pen, which at the present time, is first in the contest, it will be noticed that No. 233 laid 97 eggs, while No. 218 laid only 47, a difference of 50 eggs. In the Rose Comb White Leghorn pen a still greater difference is noted. In this respect, it will also be noticed that No. 411 in the White Wyandotte pen leads all the others by a good margin, with a record of 112 to her credit.

This contest, in our opinion, goes to

show that the breeders should give more attention to the individual egg yield. A number of the hens in this contest have not laid enough eggs to pay for the feed they have consumed, to say nothing of the cost of caring for them. The White Wyandotte Club of Kansas is doing just what every breeder of poultry should do—hold a laying contest. This can be done very easily in the yards of every breeder, by the use of trap nests or other methods whereby the attendant can keep an accurate record of the number of eggs laid by each hen, and thereby find out just the hens that are the money makers. A hen that does not lay at least 100 eggs a year is a losing investment and should be disposed of. In this way the egg yield of the whole flock can be greatly increased, and we believe that the time is not far distant when it will be no uncommon thing to have flocks of laying hens averaging close to the 200 eggs per hen mark.

Growing Branch of the Industry.

Nature cannot be improved on. The newly hatched chick is provided with sufficient nourishment to sustain it for two and in many instances, three days. This fact makes the shipping of newly hatched chicks not an overhazardous undertaking. The business of selling young chicks is growing faster than any other branch of the industry and it would seem that in the near future most every breeder would be sending out newly hatched chicks as well as fresh eggs for hatching, from his prize matings. New Jersey can honestly claim to have originated the idea—at least this state was the first to advertise young chicks at so much each. There are a few California breeders sending out young chicks; New York ships more than any state, we believe; a woman out in Nebraska cannot supply the demand; Iowa fanciers are trying their hands at it. As a rule the young chicks get to their destination without trouble and quickly. Expressmen are careful of them as they are interesting and provide much amusement. A few simple directions on the box, or a card containing them tacked to the crate or box, aid to get the chicks through without trouble. Those who ship chicks by this method should have more to say about it. The poultry public is ever ready to learn and adopt valuable ideas.

We Are Expanding.

South America is taking up poultry culture on a fair scale. Brazil and the Argentine Republic are the latest to come out in sending pupils to this country and England to learn the work of poultry raising. Some few years ago we saw advertising that asked for poultry experts to go to these countries and operate big poultry farms. Mexican plants have increased in number very rapidly and we enjoy a large trade in pure-bred stock and eggs, as well as appliances, with that country. The industry in the Mexican and South American republics is largely commercial, so large, in fact, as to be wholly of that nature. There is no demand for pure-bred settings or breeding birds and hence those who take up poultry rearing there must depend on their skill as raisers rather than as breeders. A few miles from Rio de

Janeiro, Mr. Feliciano de Moraes owns a large estate, part of which is turned toward poultry rearing. Brahmas, Langshans, Cochins, Rocks and 'Dottes, and Orpingtons are kept. This plant is largely in the experimental stage but the owner says its success is assured. High prices for fair quality in dressed fowls and fresh eggs always may be obtained. The common disease there is "warts." It must be as dreaded there as roup is here. Another South American who has come to the United States to study animal husbandry is Mr. E. L. Marino, of Argentina. He will soon return to his father's plantation to put into practice his learning acquired in this country. South Africa came to the front rapidly as a poultry country. Americans have sent many shipments there, as well as to Australia and New Zealand. These are increasing yearly. England has a much greater trade in pure-bred fowls with her own colonies, of course, but we will soon make the American invasion of pure-bred fowls a matter of history in her colonies. As our foreign trade expands we must increase the quality sent out—it means more business and the uplifting of the American fancy.

The Fancy as a Calling.

No one need fear of the fancy being overdone. The "short-term" fancier and the demand for good birds by those starting in the business will keep up an active demand for high class stock for many years to come. The small per cent. of really high class exhibition birds from the average mating will also help keep the market alive. From five to ten per cent. of the best matings produce top birds. Fifty per cent of any variety or breed should be sold for table use or kept for market eggs. Line breeding, a closer following of pedigrees and severe selection will improve these averages in any breeder's yards. The fancy presents as much of an opening today as the breeding of any class of pure-bred stock. It can be entered more cheaply, and for the man of real ability as a student of breeding, the returns will come sooner than in any other field. Hard work with the hands and good head work, will put the breeder to the fore early. There are many men who are putting the best they have in themselves into the business of poultry breeding; and they are making names for honesty and success. Stand up for the fancy and the business in general! There is room at the top, and applied manhood can get there. The fancy is a recognized calling and many glory in it.

The Reds are Worthy.

In the May issue of the *Poultry Herald*, Mr. E. W. Wickey, says that the first mistake made regarding the late Rhode Island-American Red fiasco was perpetrated when the Single Comb Reds were admitted to the Standard. He says they are a mongrel breed and that no other can be so used as they to defraud the public in general. At times—but these are very few—some off colored birds of other buff breeds are palmed off on the inexperienced. But if the truth were known these instances are fewer than the fancy is given credit for. The Reds are no more of mongrel breeding than Rocks, Wyandottes and Orpingtons. They

have a mission to fulfill and are doing it. True, they are not as perfect in feather nor is their blood as strengthened as that of older established varieties and breeds. The "American Idol" was at one time called the great American Mongrel. If we were to breed only what are termed pure-bred fowls or thoroughbreds, the dual-purpose fowls would be stricken from our Standard and only Cochins, Langshans, Black Spanish, Leghorns and Minorcas remain. If these breeds were traced far enough into the past they, too, would be found to come from a mixture or scrub fowl. We cannot believe the fancy as corrupt as some intimate nor that there is no good in this new breed.

The Columbian Wyandotte, with its striking coloring, is becoming a hot favorite among fanciers. The Partridge and Silver Penciled came into favor very rapidly, but the Columbian is striding in almost as fast. Breeders of the Columbians claim that they have plenty of real merit to back up their beauty. This is what it takes to make any variety popular. Some fanciers of Asiatics are complaining because new breeders—ninety per cent. of them—take up the American breeds. This is because of the great demand for them. They are general purpose hens that do pay good returns. So do the Asiatics, but they need some real live clubs to push them. They have merit but it's publicity they need to get them to the fore again. It has been said that when a certain man takes up a variety, "You can bank on a boom." Those who are pushing Columbians are, or have been, successful with other breeds. The publicity that counts must be based on a worthy foundation. Then it take a publicist to bring them out. The debut of the Columbians has been successful.

A New York engineer has discovered a rare specimen of the *gallus bankiva*. This hen has but one leg and he is setting all her eggs in the hopes of originating a new breed of great usefulness. You ask where the usefulness comes in? She is easily caught when wanted for dinner: she cannot range too far, thus causing worry over hen and brood; you always know where to find her when a shower blows up; she cannot injure the garden unless provided with a wooden leg and these can easily be kept out of reach: she is not liable to encroach on the neighbor's hyacinth bed and provoke his wrath—indeed she is a very useful hen. Her worst fault is that she has but one drum-stick; and where the children are gathered about the family board this missing leg would cause trouble. Let this dear hen's tribe increase! We can stand one more new breed, anyway, when they have the merit of this one.

There is a method to tell what the sex of eggs is before hatching but we do not know of it. There are some queer theories advanced concerning it. A queer one is that pointed eggs hatch cockerels

and the round ones pullets. Another is that eggs set as soon as laid hatch pullets; those that get cold hatch cockerels. One says that if the pointed end lays to the north it will hatch a pullet; if to the south, a cockerel. This refers to the lay of the egg in the nest as the care taker finds it. Another says that eggs laid at night or in the afternoon hatch pullets; those in the morning, males! The sex of a fertile egg cannot even be told with an X-ray machine as with the naked eye the germ's sex could not be distinguished. The fancier who will become immortally famous will be he who can with certainty select eggs that will hatch chicks according to sex desired.

The interest in good poultry is spreading, says the *Egg Reporter*. This spacy little journal knows a few things about the egg trade and where eggs come from. The southwest, Oklahoma, Indian Territory and Texas are producing twenty-five to fifty percent. more eggs this year than last. This is one of the good signs of the times and shows where the fancy is growing. Some good plants have been put up down there and they are doing a husky business, if we may be allowed to use the term. Where people get a part of their substantial profits from egg production it means that soon they will be keeping only pure-bred fowls.

Perusing the columns of our English cousin, *Poultry*, we note that a large number of advertisers offer setting hens or broodies, as they are called over there. The prices range from four shillings (about one dollar) down to two shillings. Two advertisers of broodies print testimonials which show that their sitters really give satisfaction. Some advertise Buff Orpington setters, some cross-bred setters, and others of various breeds. Tested broodies come highest. Small ones bring as much as large ones. Some are sent in baskets and some in returnable boxes.

Once more Editor Robinson comes forward with a previously unthunk thought! He asks his readers if it would not be a good plan to do the judging this coming season by the old Standard, inasmuch as their matings were made by it. This brother can always be trusted to dish up a few choice and new thoughts on anything poultry! It's up to him to show us wherein the new work will interfere with the product of birds mated by the old one. Give us some good reasons for still hanging to the old work. You know the treasury needs the money!

What penalties does your state impose on chicken thieves? In Massachusetts a first offense merits nine months in the house of correction; an old offender gets at least three years' time in prison, and accomplices or those who receive stolen chickens get about the same. Fanciers know that these terms are none too heavy. The heavier they are, the better, for what can be more successful

Don't Blame the Hens

for leaving their nests when sitting; for failing to lay their full number of eggs; for being thin and scrawny; for moulting badly. It is not their fault. As long as lice are permitted to "rule the roost"—infest their bodies, these conditions will prevail. The feeder will feed the flock very much as he would fill a leaky pail with water—at a great loss, and until the leak is stopped—until the hen is ridden of lice—can full return or profit be expected. It will take but a few minutes to turn these conditions into comfortable and profitable surroundings with

Lambert's

Death to Lice

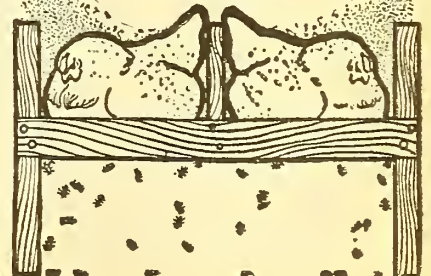

You'll find a few cents invested in this efficient lice remedy will bring returns worth dollars. It not only rids the henneries and fowls of the pests but kills them and the mites outright. Put it on your sitting hens and watch how easy and contented they will rest. It cannot hurt eggs, chicks or hen. Equally good for all body lice on poultry, horses, cattle, dogs, hogs, plants. It's the poultry keeper's "friend in need." A fine powder easy to apply that goes direct to the skin through hair or feathers. Lambert's Ointment is splendid for head lice on young chickens. Sample box of either 10 cents post paid; 100 oz. Death to Lice by express \$1.00.

in causing thieves to suspend operations than heavy sentences? When the fancier's coop is entered it is always the best chickens that go and the heavy sentence may help matters.

Poultry, good poultry, is a sign of fellowship the world over. Mr. Manley, the secretary of the American Partridge Wyandotte Club, has sent on behalf of the club four ribbons, two each for specials on color and shape, to the English Partridge Wyandotte Club for prizes at this club's next show. Our cousins say that they are splendid specimens of prize ribbons. This is the first time that anything of this nature has occurred, hence is worth chronicling. The placing of these ribbons will be watched with interest as they have never given specials for shape and color previously.

Out in California they have been having a tussle with the score card vs. comparison discussion. And the result is that the next Los Angeles show and subsequent ones will be judged by comparison. The strenuous West in the vicinity of the Golden Gate doeth things with great dispatch.

If there is a really entertaining writer on things chicken, Henry W. Kruckeberg, of the *Live Stock Tribune*, is the one. He starts a series of little journeys to the homes of California fanciers and his first is very entertaining. He adopts the Fra Elbertus style and could easily be termed the Elbert Hubbard of the fancy. We are ready for number two.

The White Langshan breeders are showing commendable activity and enterprise, and anticipate organizing a White Langshan Club at Portland, Oregon, during the Lewis and Clark Exposition. There is no reason why this should not be one of the best Specialty Clubs in the country. Mr. A. H. Asche, of Princeton,

Ill., is acting as secretary until permanent organization can be effected. Mrs. J. S. Hill, of Purdin, Mo., writes very entertainingly regarding the hopes and plans of the proposed new club in this issue of AMERICAN POULTRY JOURNAL. It is just such enthusiastic fanciers that makes the success of any variety assured.

Poultry, formerly published at Freeport, Ill., has moved to Peotone, Ill., where the publishers are erecting a building in which they will install their own printing plant.

TWO WAYS OF CARING FOR FOWL.

I have kept poultry for more than 20 years, but it is only within the last few years that I realized the immense profits that can be derived from a good flock of birds if they are well cared for. I took care of my birds as all the farmers in this vicinity did, and as many do now. We kept them in a cold house with cracks of about 1/2 inch or more in the board floor. The floor was about 2 feet above the ground. The windows were small and did not admit much sunlight. The roof was not waterproof and when the rains of spring and autumn came, it leaked through the roof, causing the house to be very damp. The coop was cleaned at the most twice a year; naturally a foul smell pervaded the coop, making it a very disagreeable place for anything alive to inhabit, with the exception of lice and mites. Rats, raccoons, skunks and minks paid frequent visits to the feathered tribe during the warmer seasons. As many as seven birds were killed by these pests during a single night. During the cold winter months the fowls would sit on the roosts half frozen. They had no scratching material to keep them busy. Many were sick, having roup, cold, diarrhoea, and many other diseases. During one summer we lost all our chickens with the exception of ten from a flock of fifty from chicken cholera. Lice were very plentiful. Eggs were scarce. During the cold winter months it would sometimes be four weeks before we would get an egg. We fed them oats, corn and rye, and a sloppy, steaming hot mash consisting of cooked oats and potato peelings, in which was stirred a little bran and cornmeal. The young chickens were fed on wet corn meal, causing many to die. Ought I to be surprised that the chickens were sick and laid eggs so sparingly. No. But I was at the time. We never thought that it was necessary to give them some green and annial food, grit and oyster shells during the winter months. Chickens were looked upon not as a profitable investment, but as something that claimed a place on the farm for some unaccountable reason.

A few years ago a sample copy of the AMERICAN POULTRY JOURNAL strayed into my hands. I was deeply interested in it. I read how other people cared for their chickens, got plenty of eggs, and how many made a living by turning their sole attention to poultry raising. Surely, thought I, they must employ different methods than what I did. I sent in my subscription and began to devour the pages of the JOURNAL. I most anxiously awaited each issue.

I now began to improve things slowly. First of all I built a new poultry

house, which is warm, comfortable and has two large windows on the south side to let in plenty of sunlight. Sunlight is a preventer of disease. In caring for our birds we can easily tell what will be beneficial to them (in most cases), by looking at our own life and seeing what is beneficial to us. Exercise is necessary for man. The same can be said of our poultry. We give them cut straw for litter in which all the grain is fed. They work hard in here the greater part of the day. The coop is cleaned thoroughly once every week. We have a large box filled with ashes which serves as a dust bath. Grit and oyster shells are constantly before them. We whitewash the coop twice a year, in the spring and fall. The food bill for 75 birds consists of the following menu. Mornings a mash composed of equal parts of bran, hominy and middlings, one handful of linseed, a pint of bone meal, or ground fresh bone, or meat, and some clover which has been steamed over night. This is mixed with skim milk to a crumbling state. A little salt is also added. Within one-quarter hour this mash is consumed. I now throw in a few handfuls of grain. About ten o'clock they get cabbage or some beets, which is a great treat for them. Noons I feed oats or barley. Evening wheat or corn. The birds are all full of vitality and in perfect health, and their egg record has improved one hundred per cent in two years.

JOHN A. VOLLMER.

GETTING POULTRY HEAVY ENOUGH.

There are lots of poultry raisers, but there is not one breeder in twenty who has birds large enough to come up to the standard weight. Some breeders think that if their birds are not heavy enough, it is because their birds are not getting enough to eat. Begin as soon as the birds are hatched. The first thing is lice; look after them; get some good lice killer and catch the chicks and sift into the down and also the mother hen. Repeat this every week and you have the first start towards getting weight.

The next thing is feed: Don't feed anything for 36 hours and then don't feed too much boiled eggs; it should be fed for the first two or three days, after that feed oatmeal, just what they will eat up clean and scratch for more; then keep them scratching the rest of their days. I don't mean to starve them, but I mean to feed just enough to keep them scratching after they get through eating. You see the little fellows scratching and peeping, you can see that they are happy, and that is just what you want; keep them happy and they will reach the standard weight. Feed wheat and later feed corn and oats. Let them run through the fields and meadows. The birds that spend the first four months of their life at liberty are the ones that go to the shows and get the prizes. It is not all in the feed as long as they are not starved. Don't wait until within three or four weeks of the time you want to show and then try to get them heavy enough by keeping feed before them all the time. Begin right and feed them right and they will be right.

Perry, Ohio. ANDREW M. PETERSON.

Too liberal feeding of boiled vegetables will produce bowel troubles.

**REGENT, THE FIRST PRIZE ROSE
COMB BLACK MINORCA COCK
AT ST. LOUIS WORLD'S
FAIR.**

The accompanying cut is an excellent picture of Regent, the Rose Comb Black Minorca cock which won 1st at the World's Fair and created such a sensation among breeders and fanciers and in the journals at that time. The AMERICAN POULTRY JOURNAL said of him in commenting on the World's Fair poultry show: "Mr. Northrup was offered \$1,000 for his first prize Rose Comb Black Minorca cock but he held out for \$1,500. This cock was the wonder and

especially when it comes to size."

The following is an extract from what the *St. Louis Post-Dispatch* said of this bird: "Geo. H. Northrup, Raceville, N. Y., has a rooster on exhibition at the World's Fair poultry show on the head of which he sets a value of \$1,500. When the owner was offered \$1,000 for the chicken Monday, he shook his head, walked away and patted the black feathers of Regent, saying, 'You are too good a bird to sell aren't you? I won't let you go for one cent less than \$1,500.'"

Some people though it poor judgment on my part, that I was not willing to sell this bird for \$1,500, but I considered him worth that price to keep, so

ed notice to that effect has been attached to every catalogue and every price list which I have sent out since March 10th. I have returned a great deal of money which has been sent me by people who had my catalogue earlier. Now I do not wish anyone to send me any money for Rose Comb Black Minorca eggs to be delivered before July 1st or for Rose Comb Black Minorca fowls to be delivered before Nov. 1st. I hope by that time to have a fine flock of them to sell. If I had three times as many Rose Comb Black Minorca hens as I have, the indications are that I could have sold all the eggs they produced at an average of more than one dollar for each egg.

admiration of all breeders present. He is a massive bird with true Minorca shape. He is, we think, as does his owner, a better bird than the \$1,000 one sent to Germany some time ago."

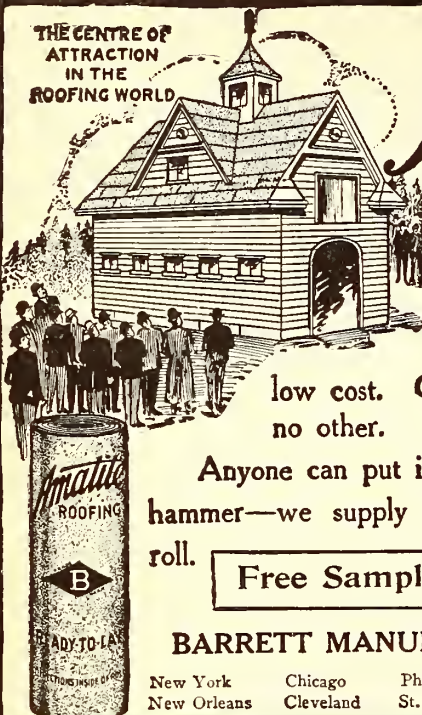

The editor of *Reliable Poultry Journal* said of Regent: "This is the most magnificent fowl I have seen at the show. Standing easily, his comb touched the top of the coop, in fact, he had to crouch slightly. He could not stand parallel to the front of the coop, without having his main tail feathers braced inward, so he generally stood corner to corner. His sickle feathers were not in. A most commanding fowl from every point of view,

why should I sell him for less? I had already sold one bird for \$1,000 and having done so, the price was not so great a novelty as to induce me to sell him for less than I thought him worth. The demand for eggs from my Rose Comb Black Minorcas this season has proven that the price was not too high. I have eight pens of Rose Comb Black Minorcas and have been selling eggs from two of these pens which were specially selected, at \$25 per 13 or \$50 per 30, and from the other six pens, at \$10 per 13 or \$20 per 30. At these prices I had sold, before March 10th, all the eggs I could deliver before June 15 and a print-

This demand is not a boom. It has been the same ever since I have been offering to sell Rose Comb Black Minorca eggs and fowls. People who know the possibilities of Rose Comb Black Minorcas are determined to have them, and the supply of good ones is very limited. The fact that poultrymen throughout the entire continent of Europe are stirred by similar enthusiasm, makes the popularity of Rose Comb Black Minorcas sure for years to come.

Mr. Von Schultzenstein, who purchased the 19 birds from me a year ago for \$3,400, is meeting with immense success with them in Germany. I sent him an-

for their eggs have taken all they laid faster than they could produce them, so that there has been some delay in filling orders but I expect from now on to be able to fill orders for eggs of Single Comb Black Minorcas with reasonable promptness, but it is only because I have so many of them that I can do so, for the demand exceeds considerably, that of any previous year. It is undoubtedly true that the great laying qualities of Single Comb Black Minorcas have made it easier for Rose Combs of the same breed to gain popular favor but it is equally true, that the frequent mention of Rose Comb Black Minorcas has caused the Minorca name to be much better known, and understood, to apply to the greatest layers of largest eggs of all known fowls, and thus the Single Combs have derived a liberal share of benefit from the Rose Comb and the two varieties have worked together to the advantage of both.

Mention A. P. J. The Reliable Poultry Supply Mfg. Co., Rochester, N. Y.

THE OTHER SIDE OF THE QUESTION.

There are two sides to every question. And in commercial dealings- it is worth something to understand the other fellow's side. No doubt the fancier whose advertising and stock have given him a wide reputation receives letters of inquiry which betray disgusting ignorance of the value of thoroughbred poultry and make unreasonable demands or are woefully lacking in definite description of what is wanted. And then there are the kickers who would not be satisfied with a first prize Chicago winner at \$2.00 unless the expressage was prepaid. And the buyer of eggs who wants the whole setting replaced or refunded because he only got ten chicks out of thirteen eggs. A friend of mine shipped a setting of eggs to a customer a hundred miles distant. In a few days the complaint came that all but five eggs were broken in transit. My friend replaced the setting and was informed that several eggs in the second shipment were broken. Several months later another customer from the same place wrote that Mr. Blank only raised seventeen chicks from the eggs he got. Yes, the fancier has his troubles. But there's another side; the buyer also has his.

If he is young at the business and doesn't quite understand the dignity of the full fledged fancier he makes the initial mistake of writing a number of inquiries on postal cards. He is innocent, but he is in earnest and would none the less make a good customer. In fact he does become a customer—but not of the fancier who despised his postal card.

Several, however, will send catalogue or letter in answer and a correspondence will ensue with one or more who seem to have most nearly what is wanted at prices that are not prohibitory. For, strange to say, even a fancier is not always definite in his description of what he has to sell. The buyer perhaps, being a little vague in his ideal, could not be more definite in his description unless he imitated Mr. Morse's correspondent and copied "the Standard." But the fancier's superior knowledge and the possession of a concrete object to describe should make him definite. If I write and ask: "Can you supply me with a yearling black Langshan cock; if so, please give description, weight, and if possible, score." Out of every three or four answers, one or more will read something like this: "We think we can supply you with what you want. Hoping to receive your valued orders, we are." They don't receive it, however, nor any further inquiry. Another will omit to give weight. Another will describe the bird in general terms and all: "He will score from 90-95," which isn't as definite as the \$10.00 at which he is valued. I might remark right here that in spite of the objection by some breeders to the private score card in making sales by correspondence it serves the very useful purpose of giving definitely and in detail the description and valuation of the bird by a presumably competent and disinterested person.

There are kickers no doubt among buyers and sometimes they have reason. The customary return privilege is not always a complete protection. A local fancier who was at all the shows in this

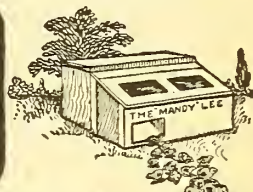

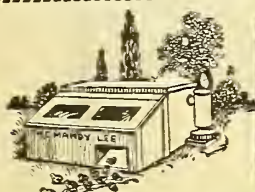

region bought a ten dollar cockerel from a prominent Eastern breeder, having described just what he wanted. When the bird arrived with over two dollars expressage to pay, he proved to be entirely unfit for the purpose he was to serve but the buyer preferred to sell him for half his cost rather than reship to the East.

These are some of the difficulties which the buyer has to contend with and every difficulty to some extent restricts the sale of fancy poultry. By entering into and helping his customer to meet these difficulties the fancier can extend the poultry business in general and his own business in particular. He can do this by courteous acceptance of the inquirer's method of asking for information, by making allowance for smaller familiarity with details of breeding than he himself has, by definite description or definite questions, by practical suggestion, by having his birds scored and thus adding the weight of a judge's authority to his own judgment, by realizing that it is his interest as well as his customer's to supply exactly what is wanted and if he hasn't it to refuse the order.

B. M. DRAKE.

Nashville, Tenn.

Fowls which are overfed in the morning are sluggish all day and become lazy and go out of condition. It is exercise of muscle that creates proper functional tone. All birds are active by nature. If productiveness is expected, natural laws must be observed. Feed moderately in the morning, especially when the flock is small and kept in limited range.

GERMOZONE

Keeps little chicks healthy, frisky, full of life and vigor. A little Germozone in the drinking water two or three times a week will keep them free from all bowel troubles. It's a sure cure for Bowel Complaint, Cholera, Roup, Throat Inflammation, Canker, Frosted Combs, etc. 50c per pkg., postpaid.

"The Germozone you sent me arrived O. K. and acted like magic on my sick chickens." R. Easterbrook, Malta, Montana.

"I have used Germozone for a long time and have not had a single sick chicken since I commenced using it." F. C. Kendrick, Dansville, Mich.

Our 1905 Calendar and Egg Record—a valuable book full of poultry helps and hints, useful every day in the year—sent free. Write for one today.

GEO. H. LEE CO., BOX 91, OMAHA, NEBRASKA

LICE KILLER

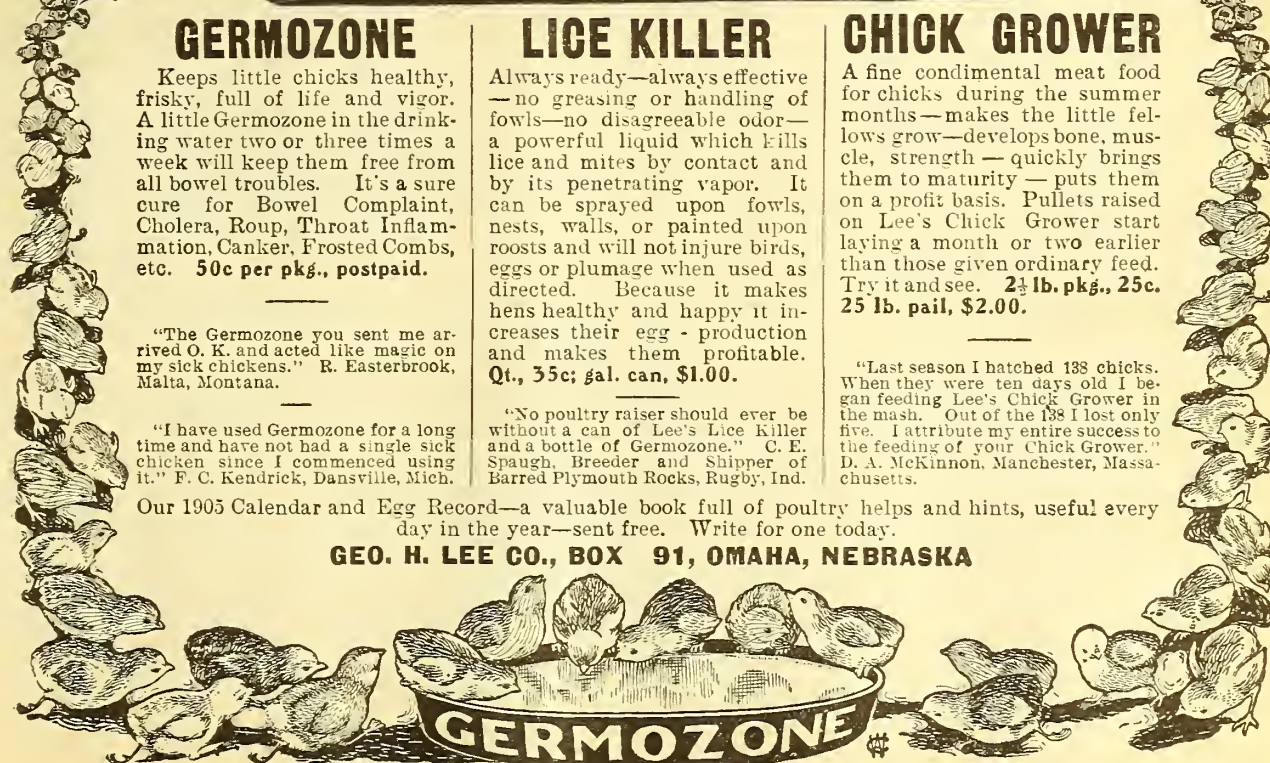

Always ready—always effective—no greasing or handling of fowls—no disagreeable odor—a powerful liquid which kills lice and mites by contact and by its penetrating vapor. It can be sprayed upon fowls, nests, walls, or painted upon roosts and will not injure birds, eggs or plumage when used as directed. Because it makes hens healthy and happy it increases their egg-production and makes them profitable. Qt., 35c; gal. can, \$1.00.

"No poultry raiser should ever be without a can of Lee's Lice Killer and a bottle of Germozone." C. E. Spagh, Breeder and Shipper of Barred Plymouth Rocks, Rugby, Ind.

CHICK GROWER

A fine condimental meat food for chicks during the summer months—makes the little fellows grow—develops bone, muscle, strength—quickly brings them to maturity—puts them on a profit basis. Pullets raised on Lee's Chick Grower start laying a month or two earlier than those given ordinary feed. Try it and see. 2½ lb. pkg., 25c. 25 lb. pail, \$2.00.

"Last season I hatched 133 chicks. When they were ten days old I began feeding Lee's Chick Grower in the mash. Out of the 133 I lost only five. I attribute my entire success to the feeding of your Chick Grower." D. A. McKinnon, Manchester, Massachusetts.

NOTES ON FEED AND FEEDING.

There is probably no theme in poultry writing that has been handled more than the one on what we shall feed, and how we shall feed it. Likewise, there is hardly a subject in poultry lore upon which so many differ. It is not the aim of the writer to criticise methods, or to advance anything superior to which we already have. We wish merely to have a talk with beginners, and to point out the necessity of certain articles in the bill of fare.

Every mash should have a certain proportion of brand in it—generally an amount equal to the measurement of all

ground oats—or whatever you use in the mash.) After the grain is mixed up thoroughly add the clover hay to the mash. The second crop of clover cut in half-inch lengths, is best. Green bone, cut up with a bone cutter, is also a valuable article of diet. The green bones are those with meat on them, which are generally thrown aside by butchers. They can be purchased for almost nothing. By having a good cutter, these bones will be ground up like sausage meat, and are not only relished by the fowls, but are of untold value to both growing stock and laying hens. Cut bone can be fed alone, two or three times a week. About one pound of cut bone to sixteen fowls

1st S. C. Buff Leghorn Cockerel. Pan-American, 1901. Canada's best Buff Leghorn, the only strain that has bred and exhibited 1st Cockerel at two World's Fairs. Nate K. Cornwall, Thamesville, Ont., Can.

the other ingredients. A favorite mixture with some poultrymen is bran, cornmeal and ground oats. In cases of loose bowels it is always best to cut down the supply of bran and add middlings, or second grade flour, and when it is noticed that the fowls are costive, increase the supply of bran and decrease the amount of middlings.

Clover hay should be fed in the mash during the winter. It is a bulky food, and partly takes the place of green food. It should be given scalded. Fill a pail with cut hay, and on this pour boiling water. Cover the vessel with a board, so the hay can steep for an hour or more. When ready for use, pour off the tea on ground grain, (bran, cornmeal and

is a good measurement. Grit and oyster shell should always be within reach of the fowls, so they can help themselves at will. The lime in the oyster shell is valuable in the manufacture of eggs.

Charcoal is helpful to the digestion. Fowls crave it. It can be bought in granulated form, and should be placed within reach of the stock. If the powdered form is used, it can be mixed with the mash. Charcoal should be given the fowls at least every other day. Of whole grains, wheat stands at the head. It is a well-balanced food, followed by barley. Corn and buckwheat are also valuable articles for a change, but both being of very fattening nature, should be fed only as a variety. Exclusive feeding of

corn produces over-fat, and a fowl in that condition is subject to many diseases. Oats is a valuable egg producing food, but when fed with the hull on the fowls should have access to plenty of grit.

Cooked vegetables are also valuable, but care must be taken that they are not too liberally fed, so as to cause looseness of the bowels. The manner of feeding, too, is an important item. Mash in the morning, just enough to satisfy hunger and make the fowls hustle about for more; whole grain at noon, such as millet or wheat; scatter among several inches of cut hay or straw, barn floor sweepings, leaves or other litter. At night whole grain, like wheat, corn, barley, or what ever is used. The secret is to keep the fowls busy at work.

By making this subject of feed a study and by closely observing the results of feeding certain articles, it will not be long before we can secure a scientific method which will bring us the best results.

Another matter under this head should be mentioned. It is to always feed the mash in troughs, and to have the troughs large enough so that the stronger birds cannot crowd out the smaller or weaker ones. And lastly, see that there is always a good supply of fresh water on hand. During cold weather temper it with hot water, so that it will become lukewarm.

L. F. RICHARDSON.

Nugent, Iowa.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—As an item of information to those who may be in the same position I am, will say I have been trying to get a start in Barred Plymouth Rocks, and after reading the article by Jas. W. Bell in the December number, about 17 acres of Barred Rocks belonging to R. E. Haeger & Co., of Algonquin, Ill., I decided to see what they had, and did see their birds at the Chicago show.

Not wishing to spend any more money prospecting and waiting a year for developments I took the train and went to Algonquin about March 1st unknown to anyone, and found my way out to Barred Rock headquarters, about three-quarters of a mile southwest of depot. Found Mr. B. E. Rogers busy attending the many pens of chickens which I can truthfully say are Barred Rocks from top to toe and from surface to skin. I put in three hours there and don't think I missed seeing any birds they had and saw no poor specimens of Barred Rocks. I came home satisfied I had found a place to get a good start of first-class stock, and sent an order for a setting of eggs from Cockerel mated pens wishing the eggs delivered from April 10 to 15. April 12 eggs were received and let rest over night; set the 13th in incubator, and May 5th took out 13 strong, healthy chicks as could wish to see.

For those having a desire to get a start in first-class Barred Rocks (as I have) and who are willing to pay a fair price for same, can say I am so well pleased I write this unsolicited and entirely unknown to R. E. Haeger & Co., and see no reason why others should not have the same success.

THEO. AMBROSIOUS

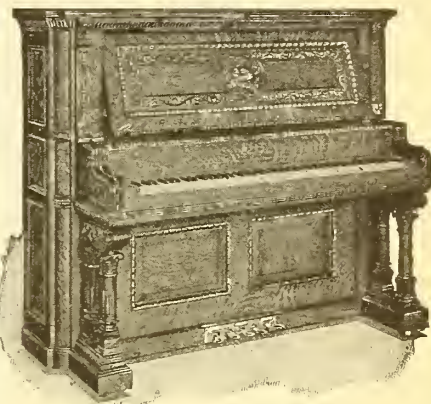

Collinsville, Illinois

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL

Anywhere We Pay Freight
No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

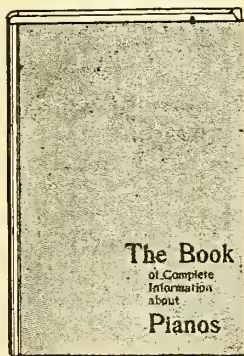

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by any ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

Send a Postal To-day while you think of it, just giving your name and address or send us the attached coupon and the valuable book of information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

Every Egg Good
Every Egg Full
Every Egg Fresh

At a Cost of **1** Cent Per Dozen

The EGG-SEAL method is the new scientific way of handling eggs. Egg-seal, one of the greatest discoveries of modern times, seals the shell of the egg, keeps out the air and prevents decay for an indefinite period. Egg-seal is a mucilaginous fluid; tasteless, colorless and odorless; safe and simple to use; the only thing ever discovered that will keep an egg absolutely fresh and full; the only thing ever discovered that will keep an egg from getting stale, flat or tasteless; the only thing ever discovered that will keep the yolk from settling and the egg from shrinking, as in cold storage. No dealer in eggs, whether farmer or merchant, can hereafter afford to handle eggs without Egg-sealing them.

...EGG-SEAL...

is sold in 1-gallon, 2-gallon, 3-gallon, 5-gallon, 10-gallon, 25-gallon (half barrel) and 50-gallon (barrel) lots, and the price (packages free) is

\$1 per Gallon F. O. B. Kansas City, Mo.

POULTRY RAISING IN OREGON.

Oregon is truly a wonderful place in which to raise poultry of all kinds. One county (Douglas) sold nineteen thousand turkeys for last Thanksgiving which brought in thirty thousand dollars. A great many were bought by a Seattle dealer, packed in cold storage and shipped to Alaska for Christmas, where the dealer expected to realize one dollar per pound. There are thousands of chickens raised in Oregon. The greatest fault with a good many people here is they raise the mongrel or "cayuse" stock of poultry, while there are quite a good many thoroughbreds raised. Some of the people will say you can't raise thoroughbreds here and make anything out of them. I don't think any person who has ever raised thoroughbreds will ever go back to the mongrel.

What is more beautiful than a large flock of birds all one color? The greater part of Oregon has such a mild climate

G. R. HASWELL.

Proprietor of The K. G. Poultry Yards, Circleville, Ohio.

that frozen or frosted combs are unthought of.

We can have green feed growing the whole year, which is one of the most important feeds for all poultry.

Nearly all of us have plenty of free range for them all of the time the year around.

There could be several times more poultry raised if the incubators were used more. They are not very extensively used in this state up to this time, but I think there will be a great many more used this year than ever before.

Prices have been very encouraging during the past year and I think everyone who raises any poultry at all, will try to see how many they, each and all, can raise this year. There are some people that are just beginning to realize what a fine climate we have for raising poultry.

Others have already taken advantage of the situation and have made lots of money and had lots of pleasure also, with their nice flocks.

But there is room for many more to go into the poultry business and make a

good living and lay up money besides. My experience to begin with was not very flattering. I commenced with twelve Barred Plymouth Rock hens; four took sore throat and died. I set only three hens, for no more would set. I brought off about twenty-five, the hens would get to fighting and run over the little chickens, killing several; then I was away from home a short time and all the young chickens disappeared but

left and only one hundred and thirty chickens left. I raised about all of that number of chickens and every turkey. I now have about seventy hens for this year.

And now I intend to raise a large number this year. I am going to use an incubator this year, and with the help of AMERICAN POULTRY JOURNAL I feel sure of success.

MRS. J. W. MORELAND.

ASHES IN THE POULTRY HOUSE.

The dropping boards in my houses are cleaned every morning. Then sift ashes over them, I find the fowls pick out large pieces that go through the sifter, leaving the fine dust on the boards to be swept off the next morning, leaving a nice clean surface for fresh ashes. Now I know some will say ashes fade the color of legs and feet, which may be so,

ROSE COMB WHITE LEGHORNS.

two pullets. I bought some more. In all I started in the second year with thirty hens, but I think some were just ready to die of old age when we got them, so I soon lost down to eighteen hens. I raised about sixty chickens, thirty-two pullets. I sold off all those old hens and hatched over 300 chickens and got a nice lot of turkey eggs. Had fifty turkeys, and I took sick; had to depend on a young hired girl to feed and take care of them. When I got up after a three weeks' sickness I had ten turkeys

SPRING CHICKENS.

Have them hatch in April and May by hens. Place them in roomy, light coops without any floor so the hen can get grass. Move them every day. Feed the chicks as much and as often as they will eat up clean chick feed as put up by the several manufacturers. On warm days let the hen out with the chicks and she will fix the lice. This is the surest way and least bother. R. A. HEWES.
Crete, Ill.

but do not think the short time spent on the boards, does enough harm to prohibit their use. EDWIN W. STAEBLER.

BEES ON A POULTRY FARM.

By VICTOR D. CANEDAY.

As I have been asked to contribute a paper for this meeting I will give you an outline of our very limited experience in bee keeping and tell you why we choose to keep bees in connection with the breeding and rearing of our thoroughbred poultry.

About the middle of December, 1899, we bought three colonies of bees for \$6. The low price inducing us at that time to begin bee keeping. We wintered them in our house cellar and the following summer, although a very poor year and many around us had scarcely a swarm and no surplus honey, our three colonies increased to seven and gave us forty pounds of surplus. During the season of 1901 our seven colonies gave us nearly 800 pounds of surplus honey and increased to fifteen stands. Our banner hive that year gave us one hundred and five pounds of surplus from the first swarm and sixty-five pounds from the old hive itself, making a total yield of one hundred and seventy pounds of comb honey. We sold five colonies and began with ten last spring, which increased to eighteen and of that number we have fourteen left, the others having been sold. The honey yield with us this

BLACK LANGSHAN.

Bred and owned by A. H. Asche, Princeton, Ill.

year was only about half what it was in 1901, the ten colonies of last spring's count, giving us a yield of only about six hundred pounds of surplus.

So far we have not lost a colony in any way, with the exception of two which left for the woods without sufficient notice. With such good success as we have had from the very outset, you will not be surprised to learn that we are quite favorably impressed with bee keeping as an adjunct to poultry raising and fruit growing.

Perhaps the one thing which most strongly influences people to keep bees is their fondness for honey and with us the supply of honey for our own table was the first consideration.

Bee keeping is particularly adapted as an adjunct to poultry farming, as the heaviest part of the work among the bees comes at a time when the poultry work is comparatively light. On most practical poultry farms the hatching season closes with May and the work during the remainder of the season is comparatively light, while the work with the bees is most exacting from the last of May through June and July. If the poultry keeper chooses to bend most of his energies to obtaining fall and winter eggs, which are the most

productive of profit, he is free to give them his entire attention, as the bees require very little of his time at these seasons.

The labor of both bee keeping and poultry raising is comparatively light work and to one not overly strong and who feels the need of an open air life there are few occupations which are more attractive and fascinating and certainly few which require so little capital to be invested and yet are capable of furnishing one with a good living, if not something besides.

In keeping either bees or poultry it is essential that one apply themselves closely to the work. Although the work itself is not heavy nor particularly taxing on one's strength, it requires constant and systematic attention to insure best results. Perhaps anyone very much disinclined to stay at home closely would not find them congenial employment, owing to this particular feature. This, however, would prove no objection to the many who have a natural fondness for the home life and its rural surroundings. In fact such would consider it rather a pleasure to stay at home and give these interests the care and attention they require.

Our farm consists of only ten acres and it is devoted to the breeding and raising of pure bred White Plymouth Rocks for breeding purposes. Our busiest time is during the fall and winter, with the selling and shipping of breeding fowls and during the spring with the sales and shipments of eggs for hatching purposes. Thus you see our work with the bees comes at a time when other work is not so pressing.

We have quite an orchard of plum trees now well started on the farm to furnish shade for the poultry and incidentally fruit for our table and for sale. Bee keeping has been taken up as a side line and has been found to interfere very little with our regular poultry work. The chickens are allowed to run among the hives to the mutual benefit, we believe, of both bees and chickens. From the fact that the chickens frequent the neighborhood of the hives so much and we seem to have so little trouble from the bee moth, we judge they catch many of the millers and I am quite certain they catch a great many drones although manifesting a wholesome fear of the workers. In many ways poultry and bees seem to be adapted to occupying the same ground.

The combination of poultry, fruit and bees is a unique one, each contributing to the well being of the other. Shade is one of the essentials on a poultry farm and nothing furnishes any more desirable shade for the chickens than an orchard of plum or apple trees and either makes a most desirable location for the apiary, especially a plum orchard, for the trees are of a low growth, thus preventing swarms clustering too far out of one's reach and in case of its being thought necessary to remove the branch on which the swarm clusters, plum trees are much less liable to injury from the unseasonable pruning. It is generally known that fowls are of no small benefit to the fruit trees, not only in consuming many insect enemies of the fruit, but in the increased fertility of the soil over

Safe and reliable
Pratts Peerless Hoof Ointment.
Made by Pratt Food Co., Phila. Over 30 years old.

which they run. Fruit growers generally, I believe, recognize the value of bees in fertilizing the fruit blossoms and increasing their chances of liberal yields of fruit, so it will be readily conceded that the production of honey, fruit and poultry products can be profitably and economically combined. However we would not care to engage in the culture of small fruits and beekeeping together, especially the raising of strawberries, for the heaviest work of picking and marketing the strawberry crop comes just in the height of the swarming season and both require prompt attention to be handled profitably.

Perhaps in the majority of cases where bee keeping is carried on in connection with other pursuits, it would be found most convenient to run principally for extracted honey. One of the chief difficulties with us has been the tendency to excessive swarming when run for comb honey, and by working for extracted honey this tendency seems to be materially lessened, as I believe is the experience of bee keepers generally. We had one colony the past summer which did not swarm at all and otherwise than the presence of considerable drone comb in the hive we could not see anything to prevent them swarming. It was one of our best Italian colonies and was used to supply breeding drones for the apiary. We thought possibly the presence of so much drone comb had something to do with it, for our other colonies swarmed more than usual, although the past season has been an unusually cool one, but they were practically without any drone comb.

With proper care and the use of modern appliances there is both pleasure and profit in "bees on a poultry farm."

THE KING OF TRAP NESTS USED IN NEW ZEALAND.

Mr. F. O. Wellcome, Yarmouth, Maine, inventor of the Ideal Trap Nest, reports that he has received a number of orders from New Zealand, as a result of the great interest being taken in egg production in that country. The trap nest is an American idea, and the above report shows that in this, as in other matters, our influence goes 'round the world.

We have received the new 1905 catalogue of the Excelsior Wire & Poultry Supply Company, Wm. V. Russ, Prop., 26 and 28 Vesey street, New York City. The size of this catalogue has been increased from 162 pages to 212 pages, which is the largest detailed catalogue ever published. With one of these catalogues in the possession of readers of AMERICAN POULTRY JOURNAL, everything in the way of poultry supplies and appliances can be secured at a reasonable price. This catalogue will be sent by mail on request of readers of AMERICAN POULTRY JOURNAL by simply mentioning Dept. O.

The attention of our readers is called to the advertisement of the Reliable Poultry Supply Company, Rochester, N. Y., who are advertising poultry supplies. Write them and mention AMERICAN POULTRY JOURNAL.

CYPHERS COMPANY'S POULTRY FARM.

Cyphers Incubator Company Purchases Fifty Acres of Land in the Suburbs of Buffalo, New York, on which to Establish a Poultry Plant, which Will Be in Charge of Professor James Dryden, Resident Manager.

April 27th the Cyphers Incubator Company bought a fifty-acre farm, located in the suburbs of Buffalo, on which to establish a complete poultry plant for experimental and demonstration purposes. They have engaged the services of Mr. James Dryden, for twelve years manager of the poultry department of the State Experimental Station, Logan, Utah, conducted in connection with the Agricultural College of Utah, to take charge of their new farm as resident manager.

This fifty-acre farm is within five minutes walk of Elma, a suburban station, on the main line of the Pennsylvania railroad, running between the Buffalo Central depot and Pittsburg, Philadelphia and Washington—in fact the southwest corner of the farm is distant only about two hundred yards from the railway tracks. The general slope of the land is toward the south, so that all poultry buildings can be faced that way. The plot of land is nearly square, extending eighty rods in one direction and eighty-five in the other. On it is a substantial seven-room dwelling and a large barn.

Architect plans are now being prepared for a ten-room residence for Manager Dryden, a modern stable, two incubator cellars, three nursery brooding houses, twelve long laying houses and a series of smaller buildings. The company began hatching chickens in April and by June 10th counts on having in the neighborhood of three thousand Barred and White Plymouth Rock, White Wyandotte and White Leghorn chicks on the premises in brooders and portable houses. It is the intention of the Cyphers Company to construct, on this site, a model poultry plant where experiments can be conducted systematically, extending over a term of years, with the object of establishing reliable records, of securing exact data on which sound conclusions can be based and of solving some of the numerous problems in which poultry raisers are deeply interested. On this poultry farm the goods manufactured by Cyphers Incubator Company will be thoroughly tested and extensively demonstrated, with a view to improving them and of adding new and useful articles to the line of poultry requisites manufactured by the company.

A very great deal depends on the man who is to be in personal charge of an experimental and demonstration plant of this kind. The Cyphers Company feel that they have in Mr. Dryden the right man for the place. He was a member of the faculty of the Utah Agricultural College and Experiment Station for twelve years, where he taught poultry classes and assisted in Farmer's Institute work. He resigned in September, 1904, to accept a position as poultryman at the Montana Agricultural College and Experiment Station at Bozeman. Before severing his connection with the Utah station, Mr. Dryden completed the manuscript of a bulletin of over 100 pages. This is now in the hands of the printers and will soon be ready for dis-

tribution. It reports a number of years' experiments on various problems, including feeding, breeding and incubation tests.

Mr. Dryden was one of the pioneer poultry experimentors in the United States. He took hold of poultry investigation when the agricultural colleges of the country had scarcely heard of a poultry problem. As evidence that his work was appreciated in his own state, the Legislature of Utah, two years ago, appropriated four thousand dollars for a poultry building at the Agricultural College of Utah—a larger sum than any other state legislature has given for a poultry building. This building, which Mr. Dryden planned, is conceded to be the most complete experimental building in the United States.

Mr. Dryden began his poultry experiments in a small way, but his work soon demonstrated that "an original thinker was at work in the poultry field," to quote words used by the director of the Montana Experiment Station. Mr. Dryden's reports have the stamp of honesty on their face. All records were carefully compiled. No conclusions were drawn where the facts did not fully justify them. His first bulletin was in demand in every section of the country and from every civilized country on the

JAMES DRYDEN

Resident Manager Cyphers Company Poultry Farm

globe. It contained matter that was received without question, and one prominent Philadelphia daily paper said of it, "It contains data that cannot be found in any other published books on poultry."

From a report of the director of the Utah station we learn that the demand for this bulletin very soon exhausted the edition, as many as one hundred requests for it being received in one day, from different sections of the United States. This bulletin, and later ones by Mr. Dryden, to this day give the only authoritative data on the yearly cost of feeding laying hens of different breeds. His bulletins also contain authoritative data as to the profit that may fairly be expected from laying hens.

Among other valuable experiments made by Mr. Dryden was that on hens versus pullets, or the most profitable age of the hen. He has carried this experiment on persistently for a number of years and has brought it to a point where the results are so conclusive that they will stand the test of time. Without Mr. Dryden's experiments we would still be pretty much in the dark in re-

gard to the relative merits of hens at different ages, and this is one of the fundamental problems in poultry keeping.

The Cyphers Incubator Company has employed Mr. Dryden on a long-term contract, with the distinct understanding that it will furnish him an extensive, modern poultry plant, properly equipped for him to conduct his experiments systematically and to carry them forward to a successful conclusion. This company, with the assistance of Mr. Dryden and a corps of efficient helpers, proposes to go straight to the bottom of some of the unsolved questions in practical poultry keeping, with the earnest hope that poultry raisers may thus be placed in a position to achieve still greater success in all branches of the industry.

ADVICE TO BEGINNERS.

The beginner in the poultry business has a number of points to consider before investing his money:

First the location and shipping facilities; second the market demands, and last his financial ability and resources.

If quick returns are a necessity, invest in the laying breeds that will keep the egg basket well filled.

If one has the money to invest in a broiler plant, the American breeds, the Plymouth Rocks and Wyandottes, will be selected. If the fancy poultry is the object, buy the best you can afford, and take care of them, and when you have a sufficient number to fill a reasonable amount of orders, advertise them, and be sure to give full value for the money received.

The poultry journals cannot afford to carry any one who resorts to dishonest methods, and they are soon discovered. There is much to learn in the fancy poultry business not set down in print. The poultry shows are a great factor in disseminating the value of good stock, and a beginner may learn a great deal that will be an advantage to him if he keeps his eyes and ears open. But the best way to get an insight in the business is to visit all the established poultry plants possible, see the fowls at home and note the various ways of housing and feeding them. Examine the incubator and brooder facilities and everything of interest about. Don't be afraid to ask questions, the veterans in the business are about the nicest people in the world to meet, and are always glad to show you their best birds and enlarge on their good points, all of which will be of advantage to you.

Don't think that buying a pen of fine birds is all that is necessary to constitute a breeder. If you have a good job, stick to it until you have a sure income from your poultry, then go in as a winner with hard work, honest dealings and lots of printer's ink, followed up with straightforward, kind answers to inquiries, all of which it is to be regretted, do not bring an order, if they did the millennium would be soon reached by we poultry fanciers.

LAURA G. FITZPATRICK.

The hungry fowl is always the healthy one.

After all other Liniments, then buy Pratts. It never fails.

Made by Pratt Food Co., Phila. Over 30 years old.

Wilber Bros. of Petros, Tenn., are now offering for sale many of their this season's S. C. White Leghorn breeders to make room for growing stock. They have some fine birds at a reasonable price, well worth double the amount they ask for them.

There is a movement on foot to organize a White Langshan Club. The breeders of White Langshans are anxious to have this variety receive the prominence and attention it is entitled to. We will be glad to say something more about this later.

YOUR ROOF

The most practical test of roofing material is the wear and tear it will stand. Don't be confused by the numerous ready roofing materials that have been launched in the last year or two. Don't buy a roofing simply because the sample looks good. It may be good, but you want to know that it's going to last.

PAROID ROOFING

lasts. Buy a roofing material that has stood the test of time, that has a reputation behind it and a reputation to live up to. Just write us for free samples and booklet, "Building Economy."

SEABOARD AIR LINE MAGAZINE

which is handsomely illustrated, and contains hundreds of specific opportunities for success, it matters not what your occupation.

J. W. WHITE

General Industrial Agent, Portsmouth, Virginia.

SEABOARD AIR LINE RAILWAY**POULTRY ON THE FARM.**

Why is it that so few of our farmers' wives raise pure-bred poultry? They, as a rule, are very active and painstaking, are quite enthusiastic in the pursuit of poultry raising. Most of them read some good journal, and in every issue see one or more articles setting forth the claim that pure-bred poultry can be raised as cheaply as the common stock and are worth much more in the markets. Still they cling to their mixed breeds, and through the long winter months patiently wait until spring for eggs to come. Nineteen-twentieths of the poultry crop of Illinois comes from the farms, hence we must conclude that from a practical standpoint they must know a thing or two about poultry raising. Most every farmer's wife in this section of the state raises annually from 200 to 500 what we term late hatched chicks.

vents us in directing these people to machines that are much more reliable than old Biddy herself, that will take care of the temperature with less trouble and attention than their hard coal base burner. Most all of our country poultry raisers labor under the false impression that pure-bred poultry cannot be raised and kept pure so long as their common stock is kept on their premises. To such I would say that it is just about as easy to raise standard stock and keep them so with hundreds of mongrels around as if you had them alone on your farm. The only precaution necessary is the throwing out of your poultry netting around the grounds selected for them during the breeding season, which lasts but three months. The rest of the year they can range together. Should some few of your mixed fowls be high flyers clip their wings and they will not intrude upon these grounds. In making your selec-

WHITE LEGHORN COCK.

Bred and owned by W. W. Kulp, Pottstown, Pa. Winner of First Herald Square, New York City, November, 1904. Note small comb. He is of fine shape and white.

Some few have their cockerels caponized; they cater to the carcass side of the market, and give no attention to egg production. They employ the means of nature in producing and caring for their chicks. Incubators and brooders in their hands, as a rule, give very unsatisfactory returns, not for want of intelligent, careful attention on their part, but through the misfortune of having been caught on the hook of some wily advertiser of a worthless machine. Yes, they are all guaranteed, but when their eggs are cooked in a cheap pine box with an attractive exterior, with a regulator that has about as much influence on the temperature as the moon, they are up against it. The fellow who blows the big advertising horn at the other end of the line chuckles in his sleeve, tightens his grip on their remittance, and wears them out by correspondence. As a rule the cheapest and most worthless articles are advertised the strongest, for example, the \$1 watch, whilst the old reliable timekeepers win their patronage by merit. It is to be regretted that advertising courtesy pre-

tion of a variety as a basis for your experimental work bear in mind that the egg producing side of the question is most easily attained, as the competition in this field is very limited you move along lines of but slight resistance. With eggs worth 40 cents per dozen to the producer, as they have been in manufacturing districts all winter, you cannot miss the mark very widely by raising as an eye-opener 40 or 50 White Wyandotte chicks. The pullets from these if early hatched, with no better care than you give your common stock, will if warmly housed and given a variety of food give you from October or November from 15 to 25 eggs per fowl monthly, and so continue until the molt, which commences in July and is fully over by October, when they will again be ready for another winter egg harvest. By carefully banding your most industrious layers and using only these in making up your pens the coming spring you can thus easily lay a foundation for a laying strain that will within a very few years give you much pleasure and profit. Should you choose to enter the

fancy side of the business your lot is likely to be one of disappointment and sorrow. You will come in direct competition with hundreds of men who make it a profession, who spare no time or expense in producing and procuring the very foremost prize-winners of the country. Should you still persist in clinging to the carcass side of the problem select some of the extra large breeds, commonly known as the flesh-formers, caponize your cockerels, feed the flock to a finish and the results will astonish you. Whatever you do with pure-bred poultry do it with a specific object in view, and you will soon realize that the claims made for standard bred stock are well founded.

L. A. RICHARDSON.

Marine, Ill.

AN EXQUISITE REPRODUCTION OF A REMARKABLE PAINTING PRACTICALLY GIVEN AWAY.

"The Three Most Beautiful Roses."
By Paul De Longpre.

At the urgent solicitation of the *Woman's Home Companion*, Mr. Paul de Longpre, who is the greatest painter of flowers in the world, consented to make a painting of what he considered "The Three Most Beautiful Roses," and the painting is without doubt one of the masterpieces of this great artist. This magnificent picture is reproduced in all its original grandeur on the cover of the *Woman's Home Companion* for June. Although this cover is an accurate reproduction of a painting worth hundreds of dollars, yet the June number, which has this exquisite cover, may be obtained at any first-class news-stands or direct from the publishers for the trivial sum of only ten cents.

Mr. Paul de Longpre is justly styled the "King of Flower Painters." He not only paints roses, but every flower that grows, and is the highest authority on flowers. His paintings are found in the most select homes. Some have sold for as much as seven thousand five hundred dollars (\$7,500).

Artists, art critics and competent judges all agree that the covers of the *Woman's Home Companion* far excel those of any other magazine.

The *Woman's Home Companion* is a magazine which in beauty and excellence, art, stories, illustrations and fashions, etc., excels all other home and family magazines. The *Woman's Home Companion* is published by the Crowell Publishing Company, New York City, also Chicago, Ill., at one dollar a year, and is the favorite magazine in nearly half a million homes, where it is read each and every issue by three million people.

We have received a copy of the second edition of the "Book of the Ham-burgs," published by the Inland Poultry Journal Co., Indianapolis, Ind. This book has had an unprecedented sale, so it is necessary to put out the second edition within a year and a half from the time the first one was put on the market. This book sells for 50 cents and can be secured in connection with AMERICAN POULTRY JOURNAL for 75 cents.

Positive cure for all hog disease
Pratts Hog Cholera Cure.

Made by Pratt Food Co., Phila. Over 30 years old.

THE WHITE LANGSHAN.

Not seeing an article for some time about the noble White Langshan in the AMERICAN POULTRY JOURNAL I thought I would remind its readers that the most noble breed is enjoying more popularity than ever before. All breeders of this noble variety report unusually large sales during the spring trade. The breeders should not be satisfied with the large classes of White Langshans at the different shows the past winter while it is something to be proud of, yet we should insist on larger. At Kansas City Poultry Show the White class was nearly twice as large as the Blacks and Kansas City is considered the Langshan center of America. More Langshans are exhibited here than any show in America.

Only five years ago not a White Langshan was at the show, and four years ago only six were exhibited, and since that date they have steadily increased in number until last January there were only two classes larger than the Whites, namely Barred Rocks and White Wyandottes. I will not speak of the quality but will give a few scores of birds. 1st hen 95¾, 2d hen 95½, 3d hen 95¼, 4th hen 95. Two hens in 1st pen scored respectively 96½, 96. All others in proportion. All judges and Langshan experts pronounced it the finest display they ever saw. The breeders of this variety have talked and written each other and have decided to organize a White Langshan Club at Portland, Oregon, during the Lewis and Clark Exposition, and I want every breeder to join this club. It makes no difference whether you attend the Poultry Show there or not. But would like to have every breeder of White Langshans that possibly can do so to exhibit there. Let us try and make the Whites one of the largest classes there.

After some persuasion we have secured Mr. A. H. Asche, of Princeton, Ill., to act as secretary of our club until a permanent secretary can be elected. Mr. Asche is no stranger to the breeders of

Langshans, he being ex-secretary of American Langshan Club. It was Mr. Asche who raised the membership of American Langshan Club from 34 to 144. No man in America has done more for the Langshan than Mr. Asche and it has always been a mystery to me why show associations like Chicago, Kansas City, etc., have not employed him to judge the classes, as his name would certainly be a drawing card for Langshans. We also wish to offer some specials on the Whites and any one who wishes to do so may send contributions to Mr. Asche, who will acknowledge the receipt of same. The fees for White Langshan Club will be \$1.00 for membership fee and \$1.00 annual dues. Annual dues to be paid Sept. 1st each year. Send Mr. Asche your \$1.00 immediately. Respectfully,

Mrs. J. S. HILL.

Route 1, Purdin, Mo.

Drugs and dopes are not desirable in ordinary cases. Some fine specimens may be worth saving by the use of drugs, and occasionally a remedy like spongia can be employed to put a chilled flock into normal condition; but the habit of stuffing animals with medicines is a bad one. Fowls can be forced into abnormal egg production by the use of stimulants, but such powders should never be given to a fowl that is really valuable. Health is the one thing sought after. Care, cleanliness and comfort will keep the flock in health and bring results in the egg basket.

A house ten feet square is none too large for a flock of twelve fowls. Overcrowding of confined birds is a positive detriment. Where runs and sheds are provided, a house of this size will serve as a shelter for twenty fowls.

ALFALFA MEAL CO. 1632 Farram St., Omaha, Neb.

Chance of a Life Time

Millville Poultry Farm Company will discontinue breeding poultry for show purposes, and in future will devote its entire capacity to producing chickens and ducks for market. We will sell you any prize winner or breeding bird in our possession for 50 per cent of its true worth. This sale includes all our winners at St. Louis, New York, Boston, and at other leading shows, as well as cream of stock bred from these winners.

This sale positively closes July 10th. Any old birds remaining unsold at that time will be carried over until October, when we will hold a sale of cream of our 1905 hatched youngsters, and balance of our old stock.

Eggs from all prize matings half price during June.

Broiler eggs \$6 per 100, \$50 per 1000 during June.

Positively no shipments made between July 10th and October 10th, as Mr. Delano closes his connection with our farm on July 10th, but will return October 10th to conduct a sale for one month in the fall. Orders booked for October delivery at any time. Prompt buyers will procure the plums. Prices quoted on single birds, pairs, pens, or entire flock of any one variety.

We offer you the best in America in Barred, Buff and White Plymouth Rocks, Buff and White Wyandottes and Pekin Ducks and at prices you will pay.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 5 lbs. of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 17 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

Prof. Henry says that success is only obtained by concentrating all efforts upon one line.

A two years' course in Hog Raising:

Teaching how to be successful.

How to secure the greatest profits.

How to get 17 lbs. of pork out of a bushel of corn and 19 lbs. from a bushel of wheat fed hogs.

How to feed to double the growth and gain over usual methods; only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the subscription to this paper, the costly experience and gathered wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says "Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this special offer.

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition the wonderfully suggestive picture in colors, "Uninvited Guests," suitable for framing, showing the pigs partaking of a meal uninvited.

This equips you for a successful hog business.

AMERICAN SWINEHERD

542 Como Bldg., Chicago, Ill.

HOW TO TELL THE STORY.

Some one asked a millionaire how he gained success, and the answer was "by watching the little details," so with advertising, success is sure to come if we watch the details, the small ends.

While we all concede the desirability of advertising and the necessity for it, if we attain our meed of success in the poultry business, we all realize that there are many elements that enter into the subject of advertising successfully.

First of all make a definite plan, and one that you can execute, and that will not cramp you financially. Consider well what you wish to do, and then count over the available cash, and make your plans accordingly.

If you wish to sell eggs to the trade, that means one kind of advertising; if you wish to sell eggs to the consumer, that is another; if you wish to sell high priced eggs for hatching to fanciers, there again is another plan required. So

avoid technical phrases. Beginners are good buyers, but have not learned all the phrases, keep them in mind, and the rest of us will comprehend as well.

Having written the ad, the next thing is its illustration if it be possible, for that individualizes it and sets it out from the rest, for this there is nothing better than good half tones, made from your own photographs; stock cuts show the variety, but not our particular birds and strains and that is what we wish to sell. A few dollars invested in half tones will be well expended.

Then a trademark is a good thing, whether it be a device, a monogram or a name, that serves also to individualize the ad, and catch the eye. However, much you may change your illustration and copy, always have that trademark in evidence, so that it will stand out as a beacon for the alert and discriminating reader. It pays!

Now we come to the matter of typographical composition, and here is where

BARRED PLYMOUTH ROCK COCK.

Winner of first at High Point, N. C., and Richmond, Va., 1904. Owned by C. C. Randleman, Ramseur, N. C.

also with poultry, there are the three possibilities and no single ad will cover all the grounds.

For instance, we who are readers of THE AMERICAN POULTRY JOURNAL, than which there is none better, would fare forth with high bred poultry, and fain would sell them to discerning poultrymen the land over, we wish to reach the best class of buyers in the country, now what?

Advertising writing is not a test of adjectives, but should include a good straight talk on facts, it should include a comprehensive resume of what there is to be sold, and why it is the best in the world. There is no question about that "to doubt would be disloyalty." Abstain from jokes, facetiousness, and double meanings. Avoid clap trap, and catch phrases, and comparisons. Be simple and you will win! Don't try to tell it in your first ad, either. Cover the ground and cover it tersely so that he who runs may get the idea and again,

there must be much care and attention. Make the compositor use a good clear face of type, and if possible a good border to fence your space in. Never use type smaller than brier in your ad, if you expect many to read it, better take twice the space; or a couple of months to the telling than try to crowd a book into a stick of type. Ask for a proof if there be time, and then you can O. K. your copy and know what you are going to have. But don't send copy in at the last moment and expect proof, for someone will be disappointed.

The selection of the medium requires careful attention, and serious consideration, and in this the field you wish to reach; the character and purse of the readers; and the shipping facilities you may have, are all questions that are equally paramount with the rate for space, in fact that is a minor question. Choose a locality that you can ship to speedily and be ready to serve on the moment. Consider the economic ques-

tions that exist, for they determine the needs of your prospective customers. If you are situated so that you can ship any where, any time, choose a National poultry paper, and AMERICAN POULTRY JOURNAL is a very good type of such a paper. Its readers dwell in every state in the union and far beyond, and they are all possible customers. The advertising rates of all first class publications are fixed on the circulation so you only pay for what you get, and no more.

Next to be considered is position, and this in advertising, as in life is important. Preferred space, or next to reading is the best, but in most cases we read all the ads. The preferred space, however, is read first, naturally, and is worth the additional price asked. The best advertisers in the country are users of preferred space, so it evidently pays, and more. Your location in the paper is a part of the makeup of that paper, and if you do not have special position the foreman will usually take good care of you, if your copy is set in time.

Keeping everlastingly at it, brings success, and judicious advertising is never desultory, and is always timely.

Who was president 20 years ago? We have to stop and think. Who is president now? Theo. Roosevelt. Yet General Garfield was as well advertised then, as Mr. Roosevelt is now, only the former advertising was stopped some time ago.

So with the advertising of standard bred poultry today, who cares what was advertised yesterday! If I could only buy twelve inches of space, I would divide it up in twelve issues, and keep it in every month, it will pay better. Be systematic and keep the ball rolling and your advertising will bring results, it cannot help it.

But there is one thing more that I would like to say, and that is have a good supply of literature to follow up your advertising with. The ad has done its duty when it brings the customer to your door, it is up to you then, you "must coop the chickens."

Have a good booklet, carefully arranged and artistically printed and illustrated, and enclose it in the letter to the inquirer. If you don't hear from him in ten days write him again and send him something else, keep your name before him, and from time to time send him more matter, so that in the end and the next time he wants fine stock he won't even think of any one else.

-C. Q. MURPHY.

Grand Rapids, Mich.

"DER GEFLUEGEL-ZUECHTER."

The stockholders of the "Der Gefuegel-Zuechter Pub. Co.," of Hamburg, Wis., held their annual meeting at their office on the 6th day of May, last, with a very good attendance, from all parts of the States, in person and by proxies. The shareholders are all readers of their publication, and therefore take great interest in same. Mr. Frank X. Thuma was elected as director for three years, and at the directors' meeting on the 10th inst., the old officers were again elected for another year.

It was also decided to go on with im-

proving the printing plant by erecting a new substantial structure and equip same with new and modern machinery at once. The company has some shares of stock to dispose of yet at \$1.00 per share, but it is expected that these will be all sold in a very short time, as the demand is good.

With the May issue of their publication, the "Der Gefuegel-Zuechter," the only German poultry journal known to us in the States, the publication entered upon its 17th year, and the prospects for same were never better. Mr. Henry E. Voigt still remains manager and editor-in-chief, and a more desirable management could not be wished for. He was the organizer of same, and has had many a hard time of it to get the journal to where it now is, and it should be patronized by every German in the country, as it is well gotten up, and is deserving of patronage. Should any of our readers wish to see a sample copy, they should send to the above address for one, as it is well worth the trouble, and it is free if you mention this paper. Subscription price only 50 cents the year, including a premium Jahrbuch for 1905, of 68 pages, which alone is well worth the subscription price.

CHANCE OF A LIFE TIME.

The Millville Poultry Farm Co., Millville, N. J., will discontinue breeding poultry for show purposes, and in future will devote its entire capacity to producing chickens and ducks for market. As our readers well know the following varieties have been bred on this farm: Barred, Buff and White Plymouth Rocks, Buff and White Wyandottes and Pekin ducks, and under the able management of Maurice F. Delano, president and manager, have taken over twelve hundred prizes for the past five years at the great shows in the country.

Positively no shipments will be made between July 10 and October 10, as Mr. Delano closes his connection with the farm on July 10, but will return October 10 to conduct a sale for one month in the fall. Orders can be booked for October delivery at any time. In the meantime up to July 10 prompt buyers will secure the plums. They will sell any prize winner or breeding bird in their possession for 50 per cent of its true value. This sale includes all their winners at St. Louis, New York, Boston and other leading shows, as well as cream of stock bred from these winners. This sale positively closes July 10. Any old birds remaining unsold at that time will be carried over to October, when they will hold the sale of the cream of their 1905 hatched youngsters and the balance of their old stock.

Sales of eggs from all prize matings will be made at half price during June.

In making these sales of stock, prices will be quoted on single birds, pairs, pens or entire flock of any one variety. They have no intention of giving them away or of making too much of a sacrifice, but quotations on any quality of bird will range about 50 per cent of usual prices for that quality. This is an opportunity seldom offered to acquire the very best stock, and is a bonafide sale of every show and breeding bird on this place, and is an exceptional opportunity for any one to secure the very best stock for show or for a foundation of breeders at prices far below their true value.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Will you please answer in your next issue the following: I bought some Black Minorcas of the best possible blood and I have found a few of the young I hatched out some white feathers coming in the lower part of the wing. Is this natural or what is the cause?

C. H. S.

Webster, Pa.

Answer: Solid colored birds have off colored feathers in their plumage to a greater or less degree. Pull out these white feathers and they may come in the proper shade. If they do not, the birds will not be suitable for breeding purposes when mature.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: I wish to ask you what is wrong with my chickens that the eggs are not fertile. Has it been in the way I have fed and wintered them? I have fifteen hens and one cock. I kept my fowls in a good, warm house, well protected from draughts. I feed corn, wheat, oats and chop feed; also a little poultry food, oyster shells and ground bone; cabbage leaves, apple and potato parings

for green food. Hens laid well all winter. About the middle of March set fifty eggs in incubator, hatched twelve chicks. Set hen about same time on fifteen eggs, hatched four chicks. Fowls seem to be in good health and look well. Would like to know if I have neglected or overdone something. The eggs are not fertile to any great extent: some weak; but those that do hatch are plump and strong.

J. H. C.

East Liverpool, Ohio.

Answer: The indications are that you overfed your fowls during the winter and they became overfat. Eggs from overfat fowls very seldom prove fertile. Change your feed to good, sound, whole wheat, and feed this in the litter so they will have to work for their food. Wheat and plenty of exercise and a good vigorous male bird will produce more and better fertilized eggs than anything else we know of.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer through your questions and answer column. Would it hurt the health of hens or spoil their feathers to spray coal-oil in

their feathers to kill lice or mites on them?

A. E. S.

St. James, Ill.

Answer: Coal oil used in this manner will have a tendency to spoil the plumage and will blister the skin of the bird. Use the coal oil on the perches and some good lice powder on the fowls, and thoroughly whitewash the houses and coops and you will not be troubled with lice.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: We have lost two (2) valuable hens in a few weeks with water and wind in crops and very little food as we did not know what to do for them. We killed one and tried to work the water and wind out of the other one, that one choked to death. Will you kindly tell in your next issue of the JOURNAL what the cure is for it, if any, and what causes it.

E. M. K.

Syracuse, N. Y.

Answer: This is what is known as catarrh or inflammation of the crop and may be caused by irregular feeding and by too much food being taken at one time. Begin treatment by placing the afflicted bird or birds in a clean, dry pen where proper attention can be given to the treatment and where the food can be regulated. The first step in treatment is to empty the crop of its irritating and decomposing contents by careful pressure and manipulation while the bird is held with its head downward. When the crop appears to be entirely free of its contents, give two grains of subnitrate of bismuth and one-half grain of bicarbonate of soda in a teaspoonful of water. This will relieve the irritation and correct the acidity. The bird should

SPECIAL SALE

Box A, Hope, Indiana

be kept without food for eighteen or twenty-four hours, and then fed sparingly upon soft, easily digested material. If one-half grain of quinine is given morning and night for two or three days the recovery is hastened. If treatment is commenced in time most of the birds will recover.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: 1. Are pullets from cockerel matings good for breeders? 2. I bought one setting of eggs this season. Would you breed the pullets and one cockerel from the same hatch or buy a new cockerel? MRS. A. M. L.

Answer: Quits frequently there will be some good pullets developed from cockerel matings. The cockerel may be used on the pullets, but we believe that better results will be secured by mating the pullets with a vigorous two-year-old cock.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Am breeding from a pen of Silver Laced Wyandottes, consisting of last June cockerel and five hens ranging from two to three years old. Hatching with hens and find that few eggs hatch, and those chicks very weak; others pipping but dying in shell and upon breaking the unhatched eggs find fully developed chicks. Last year had same trouble with these hens and three-year-old rooster. Can you explain what causes this? F. R.

Port Jervis, N. Y.

Answer: This is evidently due to a constitutional weakness in your fowls, or to your method of care and feeding during the winter months.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer in your next issue of the AMERICAN POULTRY JOURNAL this question. My eggs are failing to hatch. In breaking open the eggs there are chicks in them but they are dead. I have young stock and they are fed corn, millet and oats and get all the green feed and plenty of oyster shell and exercise. C. E. W.

Hammond, Ill.

Answer: There is a great many complaints of the above character this spring, but it is almost impossible to tell the cause. There are several reasons for this. The main reason we believe is lack of vitality in the male bird. All male birds used for breeding purposes should be strong, healthy and of the most active and vigorous type obtainable.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please tell me in your next issue how high the temperature in an incubator can get before killing the life in the eggs. C. M. C.

Muncie, Ind.

Answer: The life of the chick is in danger when the temperature goes higher than 110 degrees, and at 120 will kill the germ.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer these questions in the columns of AMERICAN POULTRY JOURNAL:

1st. What is the surest way to get rid

Puts new life and vigor in stock
Pratts P. V. Condition Powder.
Made by Pratt Food Co., Phila. Over 30 years old.

of hawks, besides shooting them? Will nux vomica fed to chickens and the hawks eat them kill the hawks and not hurt the other chickens and how much to each ten chickens?

2d. Please tell me the markings of a full blood Cornish Game.

3d. What is good for limber leg and neck?

4th. Is a cellar four feet deep enough for an incubator and brooder?

5th. Can you tell me the remedy for a chicken affected as follows: When first affected cannot follow the hen, and it is cold and stiff before it dies?

Trenton, Tenn.

H. L. M.

Answer: We would not advocate the use of poison to get rid of hawks, as the other chickens would be very liable to get some of the poison. Shooting is the safest method. 2d. A full description of the Cornish Game is given in the American Standard of Perfection, the new edition of which will be out in the near future. We are now booking orders for same. Price \$1.50. 3d. Limberneck is caused by fowls eating maggots. Remove the cause. There is no positive cure for this disease. Limber legs, or leg weakness, is generally caused by fowls being housed in filthy and damp quarters. Remove the affected birds to dry and well-ventilated quarters and give 20 to 30 grains of bicarbonate of soda (baking soda) in the drinking water, daily. Do not feed any meat or stimulants of any kind. 4th. This depends on the location. If the soil is damp it should not be very deep, but if the soil is dry, four feet, or even deeper would be all right. 5th. Lice is the cause of chicks getting in this condition. Use some one of the head lice remedies advertised in these columns.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer the following questions in the next number of your paper:

1st. Is there any sure cure for chicken cholera? If so, what is the remedy? What remedy or treatment would you recommend to prevent cholera?

2d. I have a hen that commenced to molt late in the fall and she is not done yet. She don't lay and don't seem to be very healthy. What is the cause and treatment? J. T. S.

Johnson City, Tenn.

Answer: 1st. Genuine fowl cholera is not often found. It is often confounded with some form of indigestion that produces somewhat the same symptoms and are generally fatal. Cholera proves fatal in about three or four days and treatment is very seldom successful. As good a remedy as any, or one that will be as apt to produce results, is charcoal and tannic acid, one tablespoonful of tannic acid, one quarter pound of powdered charcoal, mixed in about four quarts of soft feed. Wheat bran is the best to use in the soft feed. The charcoal will sweeten the crop and remove the gas from the bowels and tannic acid is one of the most powerful astringents known to the medical world. The fowls should not be given food in any other form for a few days, or until they show signs of recovery. One of the symptoms of fowl cholera is loss of appetite, but in exceptional cases it has been observed that the fowl will eat nearly to the time it dies. One of the first symptoms noted is the yellow coloration of that part of the excrement voided by the kidneys,

which in a healthy fowl is white, but this is present in other diseases, and in itself is not an infallible indication of cholera. The droppings are constant and are thin and watery, changing from yellow to green. The bird droops and falls into a drowsy condition, from which it is with difficulty aroused. The crop is somewhat distended and has the appearance of being paralyzed. There is great weakness and loss of flesh and the bird falls over at the slightest touch. The diarrhoea is severe from the start, and the comb turns pale and seemingly bloodless. In some cases the bird dies in convulsions. A postmortem examination shows the gall bladder distended and the liver greatly enlarged and dark green in color. Cholera is a germ disease and is generally communicated by afflicted birds contaminating the ground with their droppings and those coming in contact with food or grit taken by other birds. The wisest course to pursue in case of cholera is to isolate all affected birds, burn or bury the dead fowls and thoroughly clean and disinfect the houses and runs. As a disinfectant use one pound of carbolic acid to ten quarts of warm water. Use a sprinkling can, such as is used for sprinkling flowers, and apply liberal quantities of the solution once a day for at least a week.

2d. This may be caused by lice or by a diseased condition of the fowl. Lice will very often weaken a fowl so that they are unable to molt as nature intended they should. We would advise that this hen be killed and buried, as she will never be any good as a breeder.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer through your question and answer department, the following question: Is gravel land suitable for poultry?

J. R. S.
Phoenix City, Ala.

Answer: Gravel land is very desirable for poultry.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer the following under "Questions and Answers": Would it be advisable to put \$5,000 into a plant for raising broilers only? W.
Clio, Mich.

Answer: It would be just as advisable to put this amount into a broiler plant as it would be to put it into a dry goods business or the grocery business. If you don't know anything about the business, go slow and learn as you go.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer the following in your next issue:

1st. Should the droppings be swept off the chicken yard where fowls are confined?

2d. I have been using coal oil for scaly leg and am told it will penetrate the bone and injure my hens' legs. Will it do so?

3d. Will dry granulated bone answer the purpose of animal food for hens? How much and how often should it be fed?

W. F. A.
Beelsville, Ind.

Answer: Wherever possible the droppings should be removed. If this cannot be done, the ground should be spaded up frequently. 2d. Coal oil in itself might be injurious; a little lard and sulphur mixed with the oil will be

found very beneficial for scaly legs. 3d. Dry granulated bone is very good, but not as good as fresh ground raw bone. Two ounces to each fowl about three times a week is sufficient.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Will you please tell me if Cochins Bantams have feathers on their legs when they are first hatched?

Kewanee, Ill.

L. J. M.

Answer: They have the down on their legs and toes when hatched.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: I am a subscriber to your paper which I peruse very carefully and find very helpful. I noticed a short piece in March number on page 246 written by one Edward Fly, to which I am tempted to answer. Although I am not a writer, I would like to submit to you a short article, to be printed in your paper if thought desirable.

The first thought which struck me upon reading the above mentioned article was how very misleading such statements are to young or inexperienced persons about to embark in the poultry business. Such persons would be liable to look upon the hen as an easy mark to get money out of, to use a slang phrase, whereas I think that nearly every one who has kept fowls and endeavored to make a profit out of them, found in a good many cases that the profits were alarmingly small, in some cases so much so as to be invisible to the naked eye. What good are all these theories on egg production and profit anyway? They prove nothing except to show in some cases, the writer's ignorance of the subject of which he is writing. I will venture to wager a considerable amount that Mr. Fly has not himself, if a poultryman, been able to clear a net profit of \$900 from 400 hens in the manner he describes. Neither can he name or point to anyone else that has done nor can do it along those lines. I also challenge him to find one single flock of fowls in existence to-day that four hundred of them will average over one hundred and eighty eggs apiece a year. It has not been done, and it will be a long, cold day before it is done, either. Also I would like the menu and prices of grain and feeds whereby four hundred hens and five hundred chicks can be kept and raised for \$500.

I keep some hens myself and have considered them fairly good layers and have not thought they ate more than the general run of fowl, but I can't average 180 eggs per hen per year for the whole year, neither can I keep a hen a year for a dollar or less, but perhaps my methods are not up-to-date and I am not making the most of my opportunities. If so, I wish Brother Fly would give us some inside information as to how to achieve these remarkable and desirable results. Such information would, I think, be greatly appreciated not only by myself but even by old gray-haired poultrymen, men who have been in the business all their lives.

Really, to come right down to the ground floor of this thing, wouldn't it be a great deal more instructive and interesting to be able to tell just what

Veterinarians use

Pratts Prepared Fever Powder.

Made by Pratt Food Co., Phila. Over 30 years old.

you had been able to do in the poultry-yard and not to what flights of fancy your pen may have carried you on paper? A recent writer in a poultry paper headed an article thus: "It is a well-worn path that leads to the poultry house where the winter eggs are found." The writer in that article expressed his opinion that the additional care and trouble to produce winter eggs was greater than the profit derived from them. Personally I should disagree very stoutly from that gentleman's opinion, as I believe that in the winter eggs is where the real profit of profits comes in, yet I think the statement of the well-worn path is literally true. I think that even with a good egg yield in winter one comes pretty near earning what they get and doubt very much if the profit runs up in the big figures.

I have kept hens for several years and have always been able to show a small profit at the end of the year, but do not regard it as a bonanza or get rich quick scheme by any means. In conclusion let us hope that Mr. Fly will come again and give us something less elusive and more satisfying than conservative estimates, which at best are slippery things and which prove that if figures won't lie they will at least bring us to misleading conclusions.

ALVIN L. DUDLEY.

Kendal Green, Mass.

CARE OF THE CHICKENS.

With many of the old fowls shortly becoming ragged and untidy looking, as will be the case, the chief interest in those yards in which chickens are reared will center in the young birds. A great amount of discussion has taken place as to whether the chickens should be allowed water to drink or not. Some of the most successful breeders of prize poultry allow no water to their young stock, while others give both milk and water. As the chickens will drink greedily, when offered water, it has been inferred that it is cruel to withhold it from them, but the young of many wild birds have little or no water. Upon many estates, where pheasants are largely reared, the best results are said to be arrived at when the no-water system is adopted. The young birds are then not liable to gapes, often so terribly fatal, and are seldom severely troubled with diarrhoea. Rearing of game fowls, too, are in the habit of giving only a little water twice a day.

The well-known poultry authority, Mr. Lewis Wright, who has gone exhaustively into this question, has come to the conclusion that the preponderance of experience is on the side of withholding water. If the chickens are hatched late and the weather is hot and dry, a difference should be made, but, in the spring, when soft food is mainly given, one drink after breakfast and probably a few sips at night, will be found sufficient. Young chickens should never be allowed to drink an unlimited quantity of cold water after prolonged thirst, and those that have been accustomed to a constant supply of fluid from the first should have any change made very gradually.

There is no question that chickens are reared more easily and satisfactorily

Kills lice on horses and cows
Pratts Liquid Lice Killer.

Made by Pratt Food Co., Phila. Over 30 years old.

when they are kept apart from the full-grown fowls, so, if it can be managed, they should have separate quarters. In any event, they ought to be fed where they can have their meals without being ill-treated and tramped on. To enable this to be done, some wooden framework can be made of thin boards nailed together in the shape of a square and the top covered with wire-netting. The size can depend upon the number of chickens and the dimension of the yard, but five feet by five feet with a height of fifteen inches will generally be large enough. A few holes should be made in the sides sufficiently big for the chickens to go in, but too small for the old birds. If the food is thrown inside these shelters, the youngsters can feed unmolested.

During hot weather, if the chickens lose their appetites to some extent, the supply of food can be decreased by giving less at each meal and giving fewer meals. If there is no grass run for them, plenty of green food must be supplied, lettuce leaves or cut grass are as good as anything, but must be given fresh daily, all not eaten the previous day being removed. The soft food will soon get sour in the summer, so it should be mixed only as required and all feeding troughs must be constantly cleaned, otherwise diarrhoea will make its appearance, probably with many fatal results. If this malady is noticed, some boiled rice, well sprinkled with powdered chalk, will often stop it. Rice water to drink will sometimes affect a cure, and in the more serious cases, a few drops of chlorodyne (about half a dozen) three times a day, will prove efficacious. The chickens should grow fast during the warm weather, if fed and treated with ordinary care.

Poughkeepsie, N. Y. A. V. MEERSCH.

SELECT FOOD EGGS.

The egg derives its albumen and shell from the oviduct. When an egg is not properly shelled, it shows that something is wrong with the hen that laid it. Whatever the trouble may be, it is likely to become chronic and injure the breeding value of the bird. I believe that eggs with rough, uneven, chalky or ridgy shells should be discarded and also the hens that lay them.

F. O. WELLCOME.

Sore backs are the direct result of the use of a too vigorous cock, and one whose spurs and nails are too sharp. When the hens commence to show signs of this trouble, just watch them awhile, and you will soon see how it is caused, and the remedy is a very easy and simple one, about all that is necessary to prevent the spread of the trouble being to trim off slightly the spurs as well as the sharp ends of the nails. At first the feathers of the hens on the backs show that some of them have been torn off, and unless the cock bird be treated as above the backs become raw and sore, presenting a very bad appearance. When they have gotten sore, apply a little sweet oil, and keep the birds out of the sun, and away from the cocks until the wounded parts commence to heal nicely. If the breed is small the hens may be injured by too heavy a male. Remedy then lies in changing to a smaller male, or possibly in removing him entirely if the flock is only for domestic uses or for pleasure.

OWN A FANNING MILL.

Increase Your Profits by Cleaning, Separating and Grading Grain and Seed.

How to Get a Valuable Booklet Free. Every farmer ought to own a first class fanning mill.

"Neither wise men nor fools can work without tools."

So runs the old adage, and it is just as true today as when it first gained currency hundreds of years ago.

You can't have clean seed without a fanning mill. There will be a certain percentage of weed seeds and dirt in every bushel that has not been run through a fanning mill.

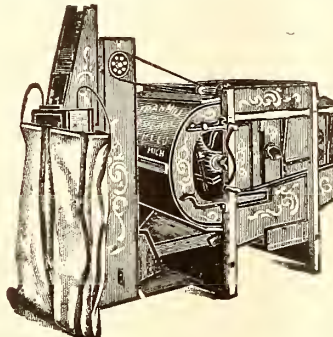

And in spite of all your care, some oats or other grain will get mixed in with your wheat unless you use the fanning mill.

Then again, it is utterly impossible to have your grain of perfect grade if you take it just as it comes from the threshing machine. The threshing machine isn't in the grain-grading business—it shells out any grain that comes along—mixes the good, bad and indifferent all together.

With a Chatham fanning mill you can clean, separate and grade your grain and seed all at one operation; for that reason we recommend the Chatham to our readers.

This machine, manufactured by The Manson Campbell Co., Ltd., Dept. 52A, Detroit, Mich., has been on the market for over fifteen years and is in use by progressive grain growers the world over.

We want every one of our subscribers to read up on the advantages of clean seed, grain grading and grain-breeding. By writing a letter to The Manson

Campbell Co., Ltd., mentioning this paper, you can get the very latest and most authoritative information on every phase of this important subject. The Chatham fanning mill not only enables you to do away with the weed nuisance, but to increase the yield of every acre sown or planted, and insures you the highest market price for your crops. Just ask for the free book, "How to Make Dollars out of Wind," when writing to the company. It is a book every wide awake farmer should read.

King Bros., formerly of Oshkosh, Wis., have removed to Omro, Wis., R. F. D. 21. They are exclusively breeders of Barred Plymouth Rocks, breeding the well-known Thompson strain of Ringlet Barred Plymouth Rocks. They pay especial attention to the shipping of eggs and these eggs are from the finest exhibition cockerel or pullet matings at a very reasonable price. They will send free their illustrated catalogue describing their matings.

J. H. Doane of Gouverneur, N. Y., as our readers all know, makes a specialty of Black Minorcas. They are farm raised and can be depended upon. The balance of the season, he will sell eggs from his best matings at a reduced price.

G. A. Gibson of Hector, Minn., breeder of Buff Orpingtons, writes that his birds never lost but one first prize in competition which demonstrates the splendid quality of his stock. He is selling eggs from all his matings at reduced prices now.

H. C. Beebe of Canton, Ill., writes that he has 600 of the best early S. C. White Leghorn chicks he ever raised. Part of this stock came from Mr. Travers of Brighton, Mass., who has taken a premium on eggs at Boston the last ten years. The balance are crossed between Blan-

chard's stock and Vanatta's Chicago stock, except 200 which are pure Vanatta strain.

WEDDING ECONOMY.

The practical side of a wedding, the problem of bringing the festivities within a reasonable expenditure, is given consideration in a carefully written paper in the June *Delineator*, which contains also suggestions for wedding cookery that will be appreciated by those who are interested. Various other items of domestic value are given in the form of recipes under the headings "Luncheon Dishes," "Spinach and Its Hygienic Value," and "Unique Decorative Desserts," and Isabel Gordon Curtis adds a chapter on canning fruit in "The Making of a Housewife." House plans and house-furnishing ideas and seasonable gardening suggestions are other features that will appeal to home makers.

BRASS.

If a man has a cheek of brass, perhaps he can afford to use any old soap for shaving. Most men, however, must steer clear of ordinary soaps, if they wish to shave with ease and safety. Common soap is too harsh for the delicate skin of a man's face. It yields a thin, miserable lather, the razor pulls, and the skin is left sore and rough. Williams' Shaving Soap is made especially for shaving tender faces, and yields a rich, lasting lather, and leaves the skin soft and velvety. As per their offer in another column, the J. B. Williams Co., Glastonbury, Conn., will send you free a trial sample. "Be fair to your face."

Ira C. Keller of Prospect, Ohio, has a change of ad this month in which he announces a sixty-day sale of Golden and White Wyandottes, in which he offers about 400 head of this year's breeding birds at less than half price out of this year's matings. This is a rare chance to get some of America's best birds.

His birds won thousands of premiums at the leading shows for the past eighteen years, including World's Fair, Chicago, Boston, Philadelphia and Buffalo, and three hundred premiums at Madison Square Garden, New York. He is also offering eggs from his fine matings at a cut price the balance of the season. If you want fine birds and eggs at great bargains, you cannot do better than to write to Mr. Keller.

In a notice regarding the stock of Mrs. A. J. Colvin of Pearl, Ill., no mention was made of the fact that she breeds Barred Plymouth Rocks. Mrs. Colvin makes a specialty of Barred Plymouth Rocks, and her ad in the May issue was incorrectly headed "Buff Plymouth Rocks." We wish to call attention to these errors and also to emphasize that Mrs. Colvin makes a specialty of her Barred Plymouth Rocks as well as being a breeder of White Wyandottes, Bronze turkeys and Pekin ducks. The season is late this year for hatching, so that buyers can still take advantage of getting excellent bargains from Mrs. Colvin. Barred Plymouth Rock breeders should place their orders at once with Mrs. Colvin for stock and eggs with assurance that they will be well taken care of.

One of the finest poultry catalogues that has reached this office is that of Jones, the Wyandotte man, at The Pines, Paducah, Ky. This has a fine cover in colors, is filled with splendid illustrations of The Pines Wyandotte farm and scenes on the farm, as well as pictures of their prize-winning Wyandottes. It is printed on splendid paper and the half-tone illustrations are the best that can be made. In addition to Wyandottes, they also breed and sell Scotch Collie dogs and horses. This catalogue should be in the hands of every reader of AMERICAN POULTRY JOURNAL.

The Egg-Seal Co., Dept. F., Kansas City, Mo., commences advertising this month their new method of keeping good eggs good by sealing the shells and rendering them air-tight by the new chemical solution called Egg-Seal. By using this preparation the proprietors claim that an egg can be kept fresh and full when not in the fluid and they state that by applying this preparation that eggs can be kept for a year and over.

We are in receipt of a booklet entitled "How to Dress Poultry," written by T. Vaughan Stapler, 324 Mathilda street, Pittsburg, Pa. Mr. Stapler writes from experience on this subject. The price of the booklet is 25 cents, postpaid.

THE BEST BREED FOR THE CITY LOT.

How often we hear the remark, "Confound that old dunghill hen; there she is over the fence again destroying Mrs. — garden. I wonder where she gets out; it does not seem possible that she can fly over that six foot fence!" Upon investigation it is discovered that she clears the fence without any trouble. This is very annoying and disagreeable to both owner and neighbor, and very often creates ill feelings and usually makes bitter enemies. If on the other hand a breed were selected more adapted to close confinement this would not occur.

I would therefore suggest that one of the heavy breeds would answer the purpose exceedingly well, either the Brahmas, Cochins or Langshans, whichever would take the eye of the prospective purchaser; as to laying qualities they rank about the same. The breeds in question will not attempt to fly over a fence four feet in height and bear confinement well.

With a few dollars invested for a setting or two for eggs from some good reliable breeder will enable one to get a good start, but to establish a quicker and more profitable start or foundation, I would suggest to purchase a trio or pen of the above mentioned breeds. Your hens will be laying for you, while the eggs you purchased would only be hatching, and at the same time running the risk of receiving a good hatch, for there is no breeder who will or can guarantee eggs to hatch any certain per cent. You will undoubtedly have a setting or two for sale should an opportunity present itself, thereby getting some returns on your money invested on the stock, and at the same time realizing a much better figure on the eggs than you would on the eggs laid by the dunghill hens.

It costs no more to feed a half dozen fancy fowls than it does to feed the same amount of common trash. It also creates a pleasure, and more parties should interest themselves and add to their recreation a half dozen or so, of fancy fowls, and if not interested them-

selves, give the children a chance to make a little pin money, which can readily be done, secure for them monthly journals on poultry, and give them full swing of hatching, caring and rearing of the chicks. It will keep them off the street, out of mischief and out of undesirable company, and it will guide them into better business ways of life.

It finally becomes a hobby, and when it has reached this stage, usually one's whole heart and soul is wrapped up in the breed he loves best, whichever one it may be. About this time you have looked over and studied the journals, and

WHITE LANGSHAN.

Bred and owned by A. H. Asche, Princeton, Ill.

you see that a show is going to take place in one of your neighboring towns, and the first thought you give it, is, I wonder if my stock has quality enough to win; whether you think they are or not, the fascination becomes so strong, that you pick up courage, either to go yourself or send your best specimens: should you lose you are not discouraged, as this has become your hobby, and the fever has risen to such an extent that you cannot resist or break away, but look forward for the next opportunity to show.

A war of opinions sets you thinking

after your birds have been returned home, and as you have learned all their weak points you at once discover that you are not up to snuff to win alongside of good specimens, and you commence to realize that something must be done to improve your stock.

You at once communicate with the breeder you purchased eggs or stock from in order to keep in the strain, which is of utmost importance, and realizing by this time that cheap birds will not do, you use your knowledge to best advantage, and put all your spare money in one or two first-class specimens, and when another show has disappeared your birds come home with honors, and this is the time you will not have any trouble disposing of your surplus stock and eggs. The show-room is a speedy educator, and progressiveness of today is due more to the efforts of the live breeder than any other factor, and great precaution should be taken in selecting mating and above all cull closely. It must also be understood that fowls must be kept free from vermin, and in order to secure the best conditions of laying stock, wholesome food and good clean water and houses are absolutely essential. Every poultry man should understand this perfectly. Birds should also have plenty of exercise when confined, this can be done by throwing the grain in the litter so they will have to scratch for it, and you will be astonished what progress you have made since you disposed of the dunghill hens; you have probably not only made a record for yourself, but your birds are by this time paying the larger part of your grocer and butcher bills.

The growth of the poultry business is not surprising when one considers these facts, and there is no reason why more city folks should not embark in the thoroughbreds and discard the dunghills.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

AMERICAN ROSE COMB BLACK MINORCA CLUB.

The American Rose Comb Black Minorca Club. Organized September, 1902. Present officers: President, A. J. Knox, Orono, Ontario, Canada; Vice President, F. S. Gibson, Mobile, Ala.; Secretary-Treasurer, S. T. Campbell, Mansfield, Ohio. Directors—W. C. Moat, Amsterdam, N. Y.; G. A. Clark, Seymour, Ind.; Chas. Risley, Silverlane, Conn; H. P. Larson, Beresford, S. D.

A neat booklet will be mailed free for a stamp to all interested. Our club made application for the admission of our favorites to the standard, at the Cleveland meeting of the A. P. A. and were admitted at the Indianapolis meeting 1903, and the club standard as submitted by the club approved at the meeting of the A. P. A. at Rochester, N. Y., '04. We have had classes prepared for our favorites at such state fairs as New York, Indiana, Ohio, and all the principal shows and fairs in United States and Canada. Our club will soon issue a fine illustrated club catalog which unlike other specialty clubs will contain no advertising matter. We believe the advertising should be done by the poultry journals who do more for the poultry industry at large than can be accomplished in any other way. Our catalog will give the names and addresses of all the members, and set forth the advantages of this great fowl that has come so rapidly into popularity by its own merits in well-doing. No other organization has aided in this grand work. We invite all reliable breeders to join our club before the catalog is printed so all may have their names in this finely illustrated book. Send names with membership fee, \$1.00, to the secretary and be enrolled as a member.

S. T. CAMPBELL, Sec.-Treas.,
Mansfield, Ohio.

ATLANTIC CITY.

The great and only Trenton Fair's dates this year are September 25 to 29.

As usual, the poultry department is under the guiding hand of W. S. Gladney, Jr. This means that the same liberal policy will be pursued as heretofore, and that fanciers are to be treated in the finest possible manner.

The regular premiums will be large and Trenton's reputation for a large list of specials will be surpassed this year in many ways.

Plans are under way to add several new features to the department that will be a delight to the fanciers in general. The staff of judges, as usual, will be large and composed of our leading men in their respective varieties. Premium list will be issued August 1st. Don't fail to send for one.

For exhibition space and space in premium list, address W. S. Gladney, Jr., Sec'y, Atlantic City, N. J.

WISCONSIN STATE POULTRY SHOW.

The Wisconsin State Poultry Association has settled upon January 15 to 20, 1906, as dates for their ninth annual show. Mr. Charles McClave has been engaged as judge. Everything points to the most successful show in the history of the association. An attempt, which will in all probability be successful, is being made to have the annual state appropriation increased. This will enable the association to be more liberal than ever in cash prizes and other features of interest to all exhibitors.

The Wisconsin State show, incorporated and receiving the only appropriation given any show in the state, is, of course, Wisconsin's leading exhibition. Winners from all the minor shows gather here to fight out the battle for supremacy in the state. Coming as it does during the third week in January, most of the other shows have been held before it. The dates do not conflict with Chicago, the leading show of the west. In fact, birds can be sent directly from the show at Oshkosh to the Chicago show the week following.

Announcements concerning prizes, cups, entries, etc., will be made as soon as arrangements are completed.

FRANK W. RADFORD, Secy.
Oshkosh, Wis.

CHARLESTON, S. C.

The Charleston Poultry Association, a chartered organization with a capital stock of \$2,000, began life on the 15th day of April, 1905. The following officers were elected: President, J. M. Connelley; First Vice President, Dr. Benj. McInnes; Second Vice President, J. T. Snelson; Treasurer, W. K. McDowell; Secretary, T. J. McCarty; Assistant Secretary, F. M. Pettit.

This organization is the result of the successful show held in Charleston, S. C., during November of last year. The aim of the stockholders is to make it the banner show of the South. The first Wednesday in December has been selected as a permanent date on which to hold annual exhibitions.

KNOXVILLE, TENN.

The East Tennessee Poultry Association was recently organized at Knoxville, Tenn., with a membership of thirty-five enthusiastic fanciers. They have decided to hold their first show in Knoxville, January 17-19, 1906.

ROBERT PORTER, Sec., Knoxville, Tenn.

NOTICE.

To breeders of R. C. B. Leghorns or any one interested. Our annual club catalogue, constitution, by-laws, rules and regulations and other useful information free by writing.

Waukau, Wis. FRED ALGER.

JOHNSTOWN, N. Y.

At a meeting of the Fulton County Poultry and Pet Stock Club held at the Hotel Kolaneka, Johnstown, N. Y., Monday evening, May 8th, several reports of committees were submitted which were very gratifying. The committee to solicit special prizes has been particularly successful and there is every indication that the club will have one of the finest lists of specials ever offered. The members of the club have offered \$100 in gold and several silver cups together with many articles given by merchants and glove manufacturers and the work is only started; the list will easily reach \$400 to \$500. The prospects for one of the greatest shows of the season are very bright. The secretary is Jacob H. Blunck, Johnstown, N. Y.

PARSONS, KANS.

The tenth annual poultry show of the Southeastern Kansas Poultry Association will be held in Parsons, Kans., Dec. 18-22, 1905. The awards will be placed by Judges C. A. Emry, of Carthage, Mo., and Adam Thompson, of Amity, Mo. The managers are working to make the Parsons show the largest that will occur in the southwest this fall. For full particulars address, A. E. Blaker, secretary, Parsons, Kansas.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—For the benefit of the White Langshans I have consented to act as Sec'y for the new club until we organize and elect some one. We shall organize at Portland during the poultry exhibit in connection with the fair; we want every breeder of this grand fowl

to lend us their assistance by sending in their membership fee, which is \$1.00; also if they wish to make any donation to be added to the regular premiums. For a starter at this show we want to have a fair display of them which can be accomplished by a united effort. The breed deserves a great deal more popularity than they are enjoying at present. Other varieties have clubs for the different colors, why should not the Langshans have one for the Blacks and one for the Whites. Both colors will be benefited by it. To have both colors compete against each other at some prominent show for a grand prize is an injustice to either one or the other color, which may some time cause ill feeling. Let us try to avoid this and have perfect harmony among breeders of either or both colors by organizing a club for the White Langshans, and by so doing place them in the rank where they properly belong, their good qualities will keep them there, but it will take some effort to place them there. This we propose to do with this club and when we have accomplished this no one will regret the efforts they may have put forth in this direction. With a strong club we will be in a position to dictate to some prominent show where we may decide to bring out a first-class exhibit at our annual meeting place to have our favorites judged by one who knows what a Langshan is and should be so that the best birds will win the prizes they deserve and no exhibitor will be disappointed, not even the defeated ones, if they know it was merits which defeated them. Fanciers are all of a broad mind and will take their defeat in the show room in a sportsmanlike manner when the above is the case.

Princeton, Ill. A. H. ASCHE.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—The officers of the Southwestern Wisconsin Poultry Association take pleasure in announcing their eighth annual exhibition at Delavan, Wis., June 15-20, 1906. The association in the past has so managed their show that it has year by year brought out an increased number of exhibitors from Wisconsin and northern Illinois. The officers were convinced the last season that the show had outgrown the capacity of one judge. Hence for their coming exhibition they have engaged two of the best judges in the circuit—Jas. A. Tucker, Concord, Mich., and Thos. F. Rigg, Iowa Falls,

Iowa. With this judging talent, a light airy show room, uniform exhibition coops free to exhibitors, the show at Delavan next January promises to eclipse all previous effort and enable the association to give as heretofore, Wisconsin's Best Poultry Show. For full information address the secretary.

W. E. PEPPER.
Delavan, Wis.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Lack of local interest has made it necessary that the W. N. Y. Fanciers' Association give up the summer show which had been planned for June 20-24. Will you kindly announce the fact. Yours sincerely,

J. W. MORRIS, Sec.

Jamestown, N. Y.

Secretaries of poultry associations are requested to send us the dates of their coming shows, as soon as same have been decided upon; also names of judges and other information that would be of interest to the readers of the AMERICAN POULTRY JOURNAL.

FROM THE LARGEST WHITE ROCK PLANT IN THE WORLD.

It is due the readers of this paper to present the following letter from the May R. Poultry Plant, Connersville, Ind., so that they can see what Mr. D. T. Roots, the proprietor of this great White Rock plant, says about Chamberlain's Perfect Chick Food. The evidence of this incomparable breeder of fine stock in support of claims for the excellence of this feed is of great value to poultry breeders everywhere:

CONNEVILLE, IND., Feb. 10, 1905.

Mr. W. F. Chamberlain, St. Louis, Mo.

Dear Sir: Please ship me by freight at once 500 pounds of your Perfect Chick Feed. As you know, I am still using it with the best of success and am strongly recommending it to my friends everywhere. Very respectfully,

D. T. Roots.

A lot of people who have bought Paroid roofing through the advertising in this paper are inquiring about its needing paint. "It don't look as though it would ever need painting," they write. We suggest to these people that after a year or two it would be well to paint their roofs with Parine paint, manufactured by F. W. Bird & Son, of East Walpole, Mass. It lasts longer and don't cost as much as oil paint.

W. W. Kulp of Pottstown, Pa., is making a special reduction in price of eggs and it will be well for breeders to write to him, as almost everyone knows who reads AMERICAN POULTRY JOURNAL that he breeds Rose Comb and Single Comb Brown Leghorns, Rose and S. C. White Leghorns, White Wyandottes, Barred and Buff Rocks, Pekin Ducks and Light Brahmas.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Stock for sale. Eggs for Hatching \$2.00 per 15, \$3.75 per 30, \$5.00 per 45, \$10.00 per 100. From winners pen \$3.00 per 15, \$5.00 per 30. Illustrated circular free

Sick Headache

When your head aches, there is a storm in the nervous system, centering in the brain.

This irritation produces pain in the head, and the turbulent nerve current sent to the stomach causes nausea, vomiting.

This is sick headache, and is dangerous, as frequent and prolonged attacks weaken the brain, resulting in loss of memory, inflammation, epilepsy, fits, dizziness, etc.

Allay this stormy, irritated, aching condition by taking Dr. Miles' Anti-Pain Pills.

They stop the pain by soothing, strengthening and relieving the tension upon the nerves—not by paralyzing them, as do most headache remedies.

Dr. Miles' Anti-Pain Pills do not contain opium, morphine, chloral, cocaine or similar drugs.

"Sick headache is hereditary in my family. My father suffered a great deal, and for many years I have had spells that were so severe that I was unable to attend to my business affairs for a day or so at a time. During a very severe attack of headache, I took Dr. Miles' Anti-Pain Pills and they relieved me almost immediately. Since then I take them when I feel the spell coming on and it stops it at once."

JOHN J. McERLAIN,

Pres. S. B. Eng. Co., South Bend, Ind.

Dr. Miles' Anti-Pain Pills are sold by your druggist, who will guarantee that the first package will benefit. If it fails he will return your money. 25 doses, 25 cents. Never sold in bulk. Miles Medical Co., Elkhart, Ind.

Pick the Pullets Kill the Drones

It is easy to tell which pullets will lay earliest and longest and which should be sold for market by the Walter Hogan System of Selecting the Layers and Breeders. But that's not all. You can pick the cockerels that will breed the best layers, and think what that means. With this system you can produce a flock that will be almost perfection itself. And the beauty of it all is that any one with ordinary intelligence can accomplish this with the simple, plain, complete instructions given with this system. It is not a difficult, dry scientific study, but just the knowledge of a few simple, important things about the laying and breeding features of fowls that anybody can master. Then we allow 60 days to test our plan, and if you can't learn it back goes your money. Price and full particulars free.

THE WALTER HOGAN COMPANY

17 National Bank Building Fergus Falls, Minn.

Barred P. Rock Eggs

As I am done incubating for the season I will sell B. P. Rock eggs at \$1 per 15, or \$5 per 100, Bradley Strain, White Wyandotte eggs, Hawkins, Duston Strain, same price. Turkey (Bronze) eggs \$3.50 per dozen. Pekin Duck eggs \$1.25 per dozen. B. P. Rock stock for sale also.

MRS. A. J. COLVIN,

R. R. 1, Pearl, Illinois.

THE HISTORY OF A YEAR.

I want to tell you of our experience in the poultry business. My husband has always thought such work was only for women and lazy men, but as we have an ideal place for a poultry farm, I have always wanted to try that business.

Let me tell you how I got my husband interested in the matter. Being a great reader, he always has a large number of papers and books. Well, one day I gathered them all up and laid them away and put in their place THE AMERICAN POULTRY JOURNAL and all the other magazines and books I could find on the subject; sent for all the catalogs, etc., that I saw advertised. They came in thick and fast until I had the centre table full of them.

All this time I kept very quiet. My husband would sit down, take up a paper, read it through, and then another one, until he was so full of the subject that he could not keep still, for he is a very energetic man and usually successful in whatever he undertakes. I knew it would not last long for he was deep in thought. Well, the end came at last.

band was determined to try some fine blooded stock. He said our chickens were only scrubs and he wanted to raise a standard bred fowl that he could place on exhibition. Now, this was an entirely new idea to me. He said our chickens would only win a prize for a "scare crow." I told him our chicks were good enough for us; they were Plymouth Rocks, a high scoring bird, and the poorest one in the lot had a record of 106 eggs and the eggs are large; and what we want is meat and eggs, not points. So he finally said we would start with just what we had. We had one hundred fine layers and we immediately began to save the eggs.

So when the incubator arrived (without the brooder, alas!) we had enough eggs to start it going and a great fuss we made over starting it. First my husband would light a match and then blow it out. He said I must start it as I had thought of the business first; but I said, "No, don't you remember it was your idea?" and he said, "Oh, yes, that is true, so I will start it," and as he lighted the lamp, he said, "May the good Lord bless us."

Attend To Your Renewal.

Many thousand subscriptions to the AMERICAN POULTRY JOURNAL expire this month, and we would ask as a favor that the matter be attended to at the very earliest date possible. Sometimes our subscribers wait to be personally notified by mail of the date of expiration. With such heavy work as falls upon our subscription department at this time of the year, it is impossible for us to write each one, so we would thank our patrons to attend to their renewals promptly without wait. ing for any special notification.

Subscription offers will be seen on various pages of the Journal. Send in two subscriptions at 50c each and we give your own FREE.

We cut off at date of expiration. The date on the wrapper of your paper will show to what time you are paid. "Mar. 05," for instance, means that you are paid to March, 1905.

As the policy of the AMERICAN POULTRY JOURNAL is to have all subscriptions payable in advance, we would be pleased to hear from each one in good time, so that there may be no disappointment caused by being dropped from our list. Send your subscription AT ONCE.

American Poultry Journal Pub. Co.

325 Dearborn St., Chicago, Ill.

He had been reading about the great Mary L. Broiler and Egg Plant at Sidney, Ohio, and the immense sum realized from its sales last year. Now that capped the climax.

He laid down the paper and said, "That is wonderful." "What is?" I asked, and he said, "This Poultry Farm of Mary's. Do you want an incubator?" and I said yes. "Nell," he said, "We must have 25 of them. I will send for one tomorrow." You see, that is the way with my husband; you have to fill him full of a subject and then wait for him to burst. Now he was full of the poultry subject and I could not hold him back. In the morning he sent for an incubator and a brooder. We did not know which would be better; the hot water or hot air, but finally concluded to try the hot water one.

Now came the tug-of-war. My hus-

All this time, the brooder we had ordered with the incubator failed to arrive. About a week after we set the eggs, my husband had become so enthusiastic that he ordered another brooder and machine, this time a hot air one. Time was flying, chicks were coming on, and what were we to do with them? We had a carpenter make us a brooder house and in three weeks' time it was done with a nice, warm stove in it. The house is 54 feet long, 18 feet wide and contains 24 windows. We have 2,000 square feet of floor space.

Everything was now in good shape at the brooder house, but no brooder had arrived. Imagine our feelings on get-

Big profit—rapid growth
Use Pratts Calf Tonic.

Made by Pratt Food Co., Phila. Over 30 years old.

but what were we to do with all these little chickens with no brooder and zero weather? Oh, how we did worry about them! I thought since God had been so kind up on the twenty-first day to find the machine full of little chickens. We had never seen an incubator before and were much excited over it. The machine holds 260 eggs and it was a fine hatch good to let us bring so many little lives into the world he would surely hold us responsible for them. I can't tell you how sad we felt. Our whole souls went out in love for those dear little things for we did want to do our best by them, but the more we worried, the faster the chicks came out of their shells. Was there ever anyone in our state of mind? The neighbors came in until the room was full for hardly one had ever seen an incubator hatching and they were all sympathizing with us in our great trouble; when a loud rap was heard at the door and when I opened it, what do you think? there stood the freight man and in a loud voice, he said, "Here is your other incubator and brooder; where shall I put them?"

Oh, I never was so glad of anything in my life. We all clapped our hands for joy and my husband heard the noise out in the barn and thinking the house was on fire, he sent the hired man to turn in an alarm and he hurried into the house with two buckets of water. When he saw the brooder, he shouted, "Glory! This is what I call turning sorrow into joy." They carried the brooder into the brooder house and by night it was warm, with nice sand and clover chaff sprinkled over the floor. The little chicks slept there that night for they were so crowded in the machine. There were 223 chicks out of 260 eggs.

We set the other machine and soon were head over heels in the business; and I want to tell you, our old "scare crows" of chickens got right down to work. We did it all so quietly and quickly, that the good people of R— were not aware of it until we had a brooder house full of chicks. Our other brooder turned up in the course of time having gone astray in shipment. We started in February and by May, we had over 700 little chicks. We have 30 acres of land around our home and we expect to fill it with poultry. It is just a nice walk from the public square, and as soon as it got noised around that we had gone into the poultry business, the people came pouring down on us and were much surprised at our good success. Doctors, Lawyers, the Mayor, the County Judge and many other citizens of high repute, came to see the sight.

Now this history would not be complete without an account of another one of our vicissitudes, which we trust will be the last. My husband had been reading so much about the Bone-Cutter that he thought he must have one. He looked at the pictures of a lady turning one with one hand and it appeared to be such easy work, he thought he could grind a peck of green bones each morning while I was getting breakfast. He said it would be just enough pleasant exercise to give him a good appetite (a thing he has never lacked, by the way, being an Englishman).

Well, the Bone-Cutter came all right. He was very anxious to try it and got everything in readiness at night for an

early start next morning. He had secured a half a bushel of bones and could hardly sleep that night. It doesn't disturb his sleep now.

Morning came at last and he was up at four o'clock and rushed down stairs where I soon followed him.

It was a beautiful morning; just that hour that we call the meeting of night and day; the moon still shining and the sun just on the rise. It is a sight well worth seeing.

He was so happy I thought I would leave him long enough to get breakfast and then go to see the new Bone-Cutter work. I had just got the meal ready when in he came and exclaimed, "Oh, ye immortal gods! Could the satanic ingenuity of one man invent such a diabolical back breaker? Why, it is not a 'Bone-Cutter' but a 'Bone Breaker!'"

He is now buying beef scraps and laying food and he does not feel friendly towards the Bone-Cutter. He says they are for lazy men and women.

We found a ready market for all the young chicks we can raise at a splendid price and are greatly pleased with the work. We now have four incubators and twelve brooders and our business is just one year old.

ELLEN M. CRASKE.

Rushville, Illinois.

HOW POULTRY PAYS.

A good hen is a good hen the world over, be she what breed she may.

A good hen is money in a man's pocket, and a poor one is money out of pocket.

Some farmers say it don't pay to keep hens, but it does. They say the hens won't lay in winter and when they do lay the egg will freeze. Well when they don't know more than that, it don't pay. Some have a lot of hens; all breeds, all sizes, and naturally they get all sizes eggs, which won't bring the top price, nor a long way from it. They let about as many cockerels as hens winter in the same place with the hens. This a poultryman always avoids, and every man who has hens should avoid it.

To make poultry pay you must have a breed of them, "not a lot of mixed up scrubs." When you have a breed, "be it to your liking" keep them up. "don't let them run down." Then you

want a good house for them. Have this house in three parts if possible—the center for roost coop. Plaster the wall is a good plan, as it is not to the liking of lice. It is smooth, clean, makes the house look nice—a home-like to the hen. "from whom we expect the money." As a good plan of ventilation as I know of for cheapness is to have the ceiling, "not the roof," made of narrow boards with openings between. Have straw on this, "not too much," just enough so to keep the cold out and not so the air can not go through. Then in the roof or in the wall above this floor have a door which must be open except in bad weather, then it would be a good plan to have a door in either end, so as to have fresh air from one end if the wind bothered the other. This affords fresh air through the straw and does not let in cold to any great extent, at any rate if the air is cold it is not so when it reaches the hens. When you have a good house and the hens to put in the house, then you must think of the feed, quantity, quality, and rotation of feed, grain in the bundle is an excellent thing for exercise.

Some lose chickens in various ways by mink, rats, skunk, hawk, crow, weasel, etc. The mink does not bother much here. I have a number of good cats. They look after the rats. The hawk does not dare come to my yard, as there is a large grove around the place and my dogs run and bark every time they see one. Weasel and skunk are my enemies but the dogs help hunt them when one comes around, in this way I am not bothered by losing chickens, as so many complain about—there goes my profit.

ARTHUR PETTERSON.

Hankinson, No. Dak.

Oxley Bros. of Fremont, Ohio, now have twelve of the best pens of Cochins Bantams they ever owned, and feel sure they can please their customers with stock hatched from these pens. Oxley Bros. have made some famous winnings on their Bantams, and have stock and eggs for sale in season.

A LOUSE-PROOF PERCH.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Believing that you are interested in the best there is in your line I take the liberty of sending you a photo, showing the inside finish of a hen house I planned and built last spring. The principal feature of which is the louse proof perch. This perch is 2x2 spruce, corners taken off, and resting on iron standards. This photo shows three pens 12x10 with no partitions for vermin to secrete themselves in. A fine wire mesh keeps fowls from picking each other at

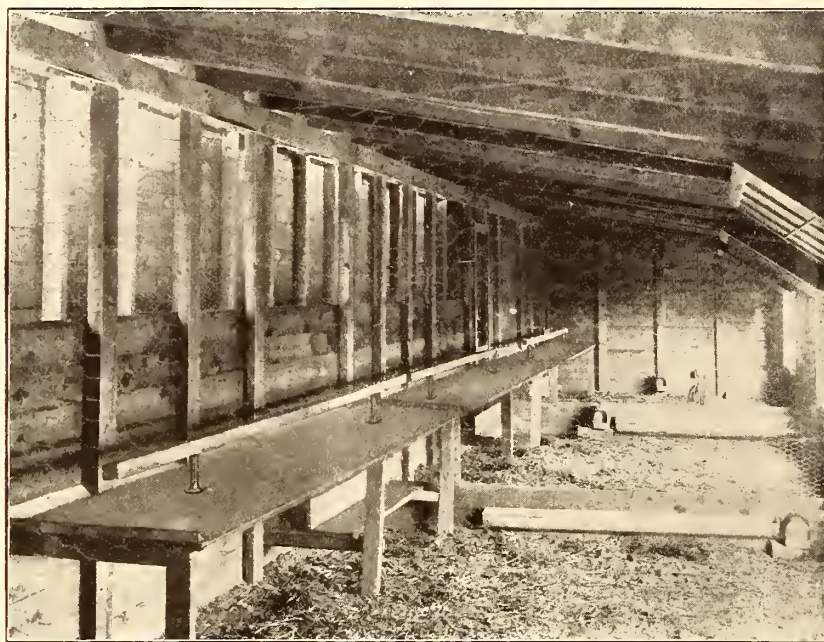

tom and a ¼-inch wire goes the length of the back, comes out one inch beyond trough, each end, and turns down. Drive a couple of staples in board, hook this on and after feeding unhook and hang up out of the way. Can be washed easy and is always neat and clean. This house is light and airy and the fowls kept here seem to enjoy themselves and are not troubled with vermin. Writers in AMERICAN POULTRY JOURNAL and other papers have said perches must not rest against the house, but do not tell how to avoid it, but this shows you how it can be done. How many houses you go into and see the perches sag in the center and when the fowls are on them they are worse, but not so here. Many poultrymen seem to have the idea that a hen is much like a hog, but give them

It is wild extravagance to give them the same food as other fowls. Their habits and their insides call for totally different treatment. They require very little exercise; simply fill up, sleep, digest and fill up again. With ducks it is *bulk* that counts; not quality of food so much as quantity. They are not comfortable or happy with a handful of hard grain rattling around in their big insides; but given the weight of that grain in a mash of brown shorts, wheat bran, corn meal and cut clover or other vegetable, they wink their eyes at you and subside in blissful content. A duck will "fill up" and thrive on from a half to a pint of the above mixture, twice a day—morning and night. The proportions are two parts each of the b. s. and w. b.; one part e. m. and to this, in bulk, add one fourth of veg-

IRON STANDARD.

the ends of the perches. There are several good features to this stand and one is the oil cup directly under the perch. The perches rest on a ½-inch pin which runs up through the center of the oil cup. The whole standard is cast iron 3½-inch base, 6 inches to oil cup from base. Oil cup 1⅞ inches for 2-inch perch to rest on. Three screw holes to fasten it to dropping board. The hole can be bored through the perch and let it rest on the cup or only bore in just far enough to keep the perch above the cup, as one may choose. These can be set anywhere and by placing them as in the photo there is no sagging in the center. In the above house, holes go clear through and perches can be turned over every day if desired. A child can remove these and the poultry man would find this a great convenience in cleaning the dropping boards. These are neat and surely vermin-proof. I do not believe any one can show anything better. The feed troughs are different from anything I have ever seen anywhere, being galvanized iron 5 feet long, 4½ inches across the top, 3¾ inches deep; rounding bot-

Interior View of Poultry House, Showing the Louse-proof Perch in use.

light, pleasant quarters and with, of course, the proper feed and there would not be so much complaint about the egg yield. Pure air is just as necessary for animals as men.

Give the hen a chance.

H. L. COOLIDGE.

Worcester, Mass.

PEKIN DUCKS.

There is an impression afloat, especially among farmers, that Pekin Ducks are very delicate birds, difficult to raise, expensive to keep, and—in a sentence—unprofitable stock to handle.

That this is true, under certain given conditions, is an undisputed fact; but, under certain other conditions, the verdict against them is false.

Ducks have an individuality all their own, which must be recognized and catered to, where they are successfully reared. They will not prove a lucrative investment if kept in damp, dirty, ill-ventilated quarters; or if over-crowded or improperly fed; or if left unprotected and exposed during cold storms.

On the other hand, they will withstand almost any amount of cold, if at night they have a tight roof over them, plenty fresh air and dry, clean bedding under them.

etable. Sand or coal ashes should be kept by them and plenty of water. During breeding time meat feed of some kind should be provided, if they are yarded and cannot provide for themselves. Surely this is not a very heavy bill of expense suggested!

Where there is a brook or pond on the farm, a flock of ducks are practically of no expense to the farmer during the summer and can be raised and marketed in the fall at a very good profit. Or—if he prefers forcing them when summer boarders are in evidence—he can drive into a little yard those three to four months old, and in ten to fourteen days have them fat and tender and ready for the table. During this time he feeds four times a day, and lessens his b. s. and w. b. and increases the e. m. to one third, instead of the previous feed of one fifth.

Especially during fattening time, when yarded, they must be kept quiet and not frightened. They are gentle, timid creatures and seem to especially feel their helplessness to defend themselves, when confined in small yards.

Galled horses—best, cheapest
Pratts Vet. Healing Ointment.

Made by Pratt Food Co., Phila. Over 30 years old.

From a business standpoint, as regards ducks versus chickens, for profit—on a small farm of say two to five acres—given the market, I think ducks will lead. And this for two reasons:

First, one thousand ducks at three to four months old, means 4,000 to 5,500 pounds of meat and some 200 pounds of valuable feathers and down; while—at the same age—it would require nearly three thousand chickens to realize the same weight.

Second, this number of chickens would call for an outlay in buildings, yards and so on, greatly in excess of what the ducks would need. (My capacity for two thousand Pekins occupies in houses, yards, etc., only about a quarter of an acre.)

Again—ducks are much more bidable than chickens; easier handled and cared for. They only require artificial heat for some four weeks; while chickens need it for over double that time.

But—where the farm is sizable, and chickens are raised for eggs and roosters as well as broilers,—probably "Ducks for profit" would have to take a back seat; as it is the four months forcing business wherein lie the chief returns in duck raising.

FRANCES ELLEN WHEELER.

Chazy, N. Y.

In a very interesting letter from G. W. Brown, Camden, Ark., proprietor of the Ouachita Valley Poultry Farm, we take the following:

"We are having the hardest season

**Prevents and cures disease
Pratts Poultry Food.**

Made by Pratt Food Co., Phila. Over 30 years old.

for raising poultry I have ever known. It has been continually raining for the last two months, and at times we have had regular floods destroying everything, still many of us are hard to down. Regardless of all this, however, I have as fine a lot of young birds as I have ever raised, and they are all the most promising, as they are from the very cream of my choicest line bred prize birds, and I am expecting many fine show birds from them. I have had a magnificent business this season. The demand for both stock and eggs has, as usual, been far greater than I could supply; in fact, many may doubt this, but I can honestly declare and prove it. I have not for at least ten years back half supplied the demand I have had, and each year I have enlarged my plant. I have one of the oldest and largest plants in the South, and by the high quality of my stock, and the honest, fair and square way of doing business the demand is so large I cannot begin to meet it. I have shipped out thousands of eggs this season and hundreds of fowls and can truthfully say, up to date, that I have had but five complaints, which I gladly satisfied. This is a record hard to beat, considering the large amount of business that I am doing. Yet from my own experience I have found that it pays to please all customers, and although while I find many, who seemingly can not be pleased and often take advantage, yet I do my best to never give one up until perfectly satisfied. I sold this last season eighteen exhibition Rock Cockerels at from \$15.00 to \$35.00 for exhibition, and all from my noted line bred strain of Rocks; all sired by my noted prize Rock male, for which I refused \$100.00. Up to date I

have heard that twelve out of fourteen of them won first or second prize in the best competition, which shows the high quality and true breeding of my stock. I am closing out a few of my choice breeding stock, and wish to say to those just starting in the poultry business, or those wanting any fresh blood, that this is a rare chance to get the best and start right, and I would be glad to hear from them."

R. E. Jones, The Pines, Paducah, Ky., is offering some bargains in this season's breeders that will be of great value to those that are anticipating purchasing high class breeding stock in Silver, Golden and White Wyandottes, and we are satisfied that any one in need of line bred birds will get more than their money's worth in this sale. Jones, The Wyandotte Mau, with his "strongest blood lines on earth," has made a national reputation at all the leading shows of the country and has bred the winners at many of the largest shows, including the bulk of the ribbons at the last Chicago show. Send for his handsome catalogue and bargain sale list, mailed on receipt of 4 cents in stamps, this is a book that should be in the hands of every Wyandotte breeder or intended purchaser as it is a book of reference, handsomely illustrated in colors, look up his ad in this issue.

CONGRESS PARK POULTRY YARDS

Box A, Congress Park, Ill.

A NEW POULTRY BOOK.

Especially Written and Designed for the
Beginners—Sent on Approval.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

We want every beginner to read his book and we are willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to us for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

We have received a copy of a new publication entitled "The Chick Book," devoted exclusively to success with chickens, published by the Reliable Poultry Journal Publishing Company of Quincy, Ill. This title is very comprehensive and fully explains the subject of the book and should be in the hands of every one raising poultry. "The Chick Book" contains 80 pages, 9x12 inches in size, and finely illustrated; price 50 cents, and with one year's subscription to AMERICAN POULTRY JOURNAL can be secured for 80 cents.

The Standard Flower City Incubator Company, Dept. C, Rochester, N. Y., have a change of ad this month. This firm sends their machines on thirty days' trial. Look up their ad and send for their large catalogue and poultry guide.

A. H. Asche, Princeton, Ind., has bred Langshans since 1885. They have won for him and his customers at all the leading shows, including three world's fairs. If you are interested look up their ad and write them for prices. They also manufacture the unequalled stock remedies under the name of A. H. Asche & Sons. They guarantee them to be as represented or refund your money.

Ackley & Page, the Buff Wyandotte breeders of Woodstock, Ill., announce in this issue a half-price reduction in the price of their Buff Wyandotte eggs after June 1st. They also offer stock from their breeding yards for sale. This is a great opportunity for Buff Wyandotte breeders to get high-class birds for a small price, as well as to get most excellent bargains in eggs.

Dr. Frank M. Chapman, of the Museum of Natural History, New York, has written for *The Century* an article on his experiences in photographing a colony of pelicans. Dr. Chapman's first account of his unique feat in photographing flamingoes appeared in the December number of *The Century*.

Poultry, formerly published at Freeport, Ill., has moved to Peotone, Ill., where the publishers are erecting a building in which they will install their own printing plant.

THE GREAT CENTRAL POULTRY FARM

The Home of Prize Winners.

Our stock took over 1,628 prizes at eight County and State Fairs held last fall. We can furnish customers with eggs from the very highest scoring pens. There is no better stock than ours in this country. As breeders we fully understand our business. We ship nothing but standard birds. We guarantee both stock and eggs to reach our customers at the nearest express office in good condition. If any fowl fails to do this, we duplicate the shipment. We also replace every broken egg free of charge. We guarantee all eggs to be fresh, fertile and true to name. If seven out of thirteen do not hatch, we duplicate the order at one-half price. We have mated for this season an unusual number of pens. These pens are headed with a number of our prize winning cockerels, and are mated for the best results.

We are now booking orders, and are prepared to fill them promptly. We ship eggs from the same stock that we breed from ourselves. From these choice pens we now offer our eggs of the following varieties:

American Dominiques,	Buff Wyandottes,	Golden Polish,
Black Javas,	*Mottled Anconas,	Cornish Indian Games,
*Mottled Javas,	*Houdans,	*Black Braided Red Games,

Write us for CIRCULAR AND SPECIAL PRICES on our new machines on the market. Assure your success by hatching our eggs in our incubators and raise the chicks in our brooders. This is a winning combination. Address all correspondence to Freeport—we have no branches.

THE F. W. NIESMAN CO. - - Box 40, Freeport, Ill.

A LEAF FROM AN AMATEUR'S NOTEBOOK.

Our first year in poultry keeping is ended; to be sure we had a few hens of various kinds before, but we started out the past season with the determination of raising the best stock we could get. In looking backward while our ardor is not abated, we have plenty of enthusiasm left and are ready for work along the same lines; we are free to confess it takes a lot of moral courage to carry out plans and ideas, where one steps from the beaten track of poultry culture in a conservative farming community.

It is surprising what an interest friend and neighbors take in your work. I believe the adverse comments of these self-constituted advisers cause many to become discouraged and drop out after a few months' trial. No one likes to be laughed at and blindly venturing in unknown paths we are over-sensitive and dread the look of pity and the complacent "I told you so," of these Bildads in poultry knowledge, we feel our own ignorance too much to reply like Job: "No doubt ye are the people," for if there is any work under the sun that is so thoroughly understood from start to finish by those with no experience whatever, it is the poultry business.

We decided upon the Wyandottes, not because we thought them the best, but they had taken our fancy, a neighbor, young in years, and not at all stale in knowledge, informed us that the Wyandottes were no good for eggs, were never known to lay more than six weeks in a year. Undismayed we pursued the even

tenor of our way, but later when we had paid five dollars for fifteen eggs of Partridge Wyandottes, conscience stricken a bit over our extravagance, trusting them in our incubator with a miscellaneous lot of the best we could get to fill out, we did feel shame-faced when friends whose good opinion we valued and who were at the time hatching great numbers of chickens with old hens, came to see us remove our brood from incubator and we had only seven chicks from our choice eggs while the mongrel lot we had bought from them, came out in goodly numbers. But these friends were tactful and kind, only suggesting trying a hen with fancy eggs hereafter. We compromised when again filling incubator and placed thirteen eggs under a broody hen, and after sitting faithfully for two weeks, one cold morning we found her dead on the nest and the eggs ruined, although we did our best to save them, but with a good hatch from our incubator, our hopes revived.

At least we have had the courage of our convictions, and when we look at our coops of "the B's blooded stock" as one neighbor has dubbed them, four pullets and two cockerels of the Partridge Wyandottes, losing one of the original number by accident, and our larger pen of beautiful white ones, we feel like the old woman far from childhood home and conditions when asked if she would like to return; replied with great earnestness: "What! Go back? there's no go back in me!"

We firmly believe that if we must economize it is best to do so with plain, comfortable houses and spend all extra money in good stock, look carefully to

details, go slow, take plenty of good poultry magazines, as life is too short to wait for experience to teach us in all things, and if we are willing to do hard work, sometimes disagreeable, morning, noon and night, and filling in between when we can, we will succeed.

SARAH B. BOWERMAN.

Rochester, N. Y.

A BEGINNER'S EXPERIENCE.

"A smooth sea does not make a successful sailor." Six years ago we decided to raise some chickens. Of course, we did not so much as know there were thoroughbred stock. We simply wanted them for eggs, table and market purposes. We decided to get us some pets; we tried Bantams, just mongrel; we went to work to prepare them a home. We built a pen 12x12 feet square, 7 feet high, covered it over with plank and brush. A very small dry goods box served as a shed. They did fine in this prison awhile, then eggs became scarce. Never did we dream they ought to have oyster shells, grit, cut bone, mashies, cut clover, etc. Three times a day we would throw down some corn or sloppy dough. At this time a scratch shed would have frightened us. As we did not succeed very rapidly we became very much discouraged. By chance a pair of Partridge Cochins came into our possession and with them came an idea also that no more indiscriminate stock for us. How nice they looked, beholding them in their beautiful plumage. Well, we tried these for one season. All new beginners become disgusted if they do not make a large display the first year. You know

they jump from one breed to another, not giving any one a fair trial. Right here we would like to say choose one kind and stick to it. Next we tried S. C. Brown Leghorns, by this time we were getting a bad case of chicken fever. We now subscribed for a poultry journal known as NATIONAL but now AMERICAN, from which we gain valuable information. We went to work and built us a poultry house on a lot 40x60 feet. We were beginning on a small scale, but soon we had a small flock that we were proud of. Leghorns "beats all" as layers. But later on in the season came the louse period. Having had no experience in that line, Mr. Louse took possession and claimed a large per cent of our young stock his victims. Finally we decided to make an ointment of salted grease, sulphur and kerosene. We applied this to 75; out of that number only 60 died from effect of remedy. Then we lost our finest cock. Here we took a relapse and wanted to try something else. Leghorns can't bear confinement well. Having only lots and no range we decided to try White Wyandottes and White Minorcas. "The White Wyandotte is surpassed by none, they fulfill every requirement for market, showroom and for eggs. They are pure white in plumage, yellow skinned when dressed, clean legged and plump bodied from the start. They have more breast meat on them as young chicks than any other breed. They are contented when confined but still good foragers when they have a chance. They mature early, are good layers, extra good setters and busy mothers." The "White Minorca is a beautiful type of bird. They are known as the everlasting

layers." Having decided upon these two varieties, now we began to prepare to raise some fancies. A poultry man has his trials as well as any professional. When one died it would always be the finest; if a hawk came it would take the largest; but amid all misfortune we are gaining footing and our birds are a thing of beauty. If nothing more the knowledge we have gained in six years of poultry is worth many, yea many times its cost. Bad luck sometimes falls in drops, sometimes in showers. 'Tis thoughts of these that make life sweeter and, too, it makes us feel as though we were of some account in the poultry work, to meet with obstacles and by perseverance overcome them.

Now one word to our new beginners and older ones too: don't think you know it all, for there is much to learn. Experience is a dear school, but by our failures we learn.

King, N. C. MRS. NELIA PULLIAM.

A SPECIALIST.

Some people have very large heads. It seems to me a person's head must be extra large if he can find room there for all things he should know if he intends to raise several varieties of fowls.

The men and women who have succeeded raising poultry are mostly specialists.

A person can find enough to learn about one variety that will require all his time. Study your poultry magazines. See if the leaders in the poultry world to-day, the ones that have made the most out of the business, are not specialists.

Time is drawing near for another sea-

son to open. A great many will be thinking of entering the poultry business. Some will rush in head over heels, spending a fortune for land, buildings, incubators and other fixtures, securing a dozen varieties of poultry.

No wonder so many quit in disgust, saying there's no money in chickens. It takes years of hard study to learn this business so as to make a success. In one year's time some expect to know all, to strut around with silk hat, gloves, pressed pants and pockets bulging with coin.

They discover instead of making money they lost money, quit, grumble about nothing in chickens.

Be a specialist, select the variety you like best. Place all time, study and money you have to spare on them.

You may find your head a trifle small to hold all needed about this one breed. Keep continuously at it. Study harder. When you have money to spend invest in something that will improve your strain. Take time and don't rush.

Some may invest in stock, some in eggs, either is all right if you deal with a reliable breeder. A good way is to attend a poultry exhibition where all varieties are at their best. Make your selection and stay by it.

Learn your chicks from beak to toenail, then you can succeed.

Some day the heavy mist that hangs before you will move peacefully away and leave sunlight, pleasure and dollars to you and yours. CALVIN BAKER.

Webb City, Mo.

Exposure to cold rains is injurious to the health of the fowls.

A Knock at Your Door

Here is a new proposition for poultrymen only. It means more money to every one of them who will thoroughly investigate it.

It is simply a co-operative plan which has been carefully worked out to combine the poultrymen of America into an association for their mutual benefit.

Co-operation is not an unknown force; it is the lever that moves all great commercial enterprises today. It turns failure into success, and makes many things possible that could not be without it. That the progressive poultrymen of America are ripe for such a plan as is offered to them by the POULTRYMEN'S CO-OPERATIVE ASSOCIATION OF AMERICA is proven by the responses we are receiving. Here, for the first time, is presented the opportunity for poultrymen actively and personally to participate, as partners, in a gigantic scheme of co-operation that will benefit them, as a class, thousands, aye hundreds of thousands, of dollars every year. The object of this Association is to combine and centralize the purchasing power of its thousands of members, thereby reducing the cost of every article the poultryman requires in the conduct of his business. Later on, when the Association has become more thoroughly organized, it will include a selling department, which

shall take the poultryman's products and market them. It isn't necessary to dwell on this benefit to the members. The POULTRYMEN'S CO-OPERATIVE ASSOCIATION OF AMERICA is organized to work for the betterment of all the trade conditions of its members. It will save them money—it will earn them money.

That the benefits may be as extended as possible and the influence of its co-operation interest a great number of poultrymen, the Association invites membership from all over the country. It offers the poultryman a profitable investment for a small sum. It insures a constant saving on his purchases. It guarantees a liberal dividend beside. It will limit the amount he can invest, but it will not limit the benefits of his membership. A \$5 investment entitles each member to all the benefits that a \$100 investment would. It will not return as great an amount in dividends—that's all the difference.

Already thousands of poultrymen have joined the Association, and applications are pouring in every day. It will pay you to invest \$5 in a paid-up, non-assessable Life Membership Certificate in this Association. It will pay you to invest more if you desire, but you cannot afford to let this chance go by.

Opportunity knocks now at your door. Don't turn it aside with a shrug of your shoulders. Investigate it thoroughly. The wise man proves his opportunities and profits by them. Be wise and write for free prospectus, "A Knock—Opportunity," and read it carefully, weigh its arguments and "see if they be good." If our proposition won't bear your closest scrutiny, turn it down, but don't turn it down and miss its benefits from force of habit. Write for the prospectus today and ask for "A Few Comments" from prominent poultrymen you all know—see what they think of this plan. Address all communications to

Poultrymen's Co-operative Association of America, 321 Mutual Life Building, Buffalo, New York.

P. Harold Hayes, Buffalo, N. Y.

A LITTLE DRY FOOD PLANT.

The subject of this article is a little 2-pen poultry plant in a nearby suburb of Chicago and is not intended for a money maker, but for recreation, and the good that comes of having fresh eggs at all times and the right kind of poultry meat. The lot or rather lots are nearly all lawn, and with apple and cherry trees, gooseberry and currant bushes make the finest kind of a place for young chickens.

The hen house is 12x24 feet, divided into two pens 12x12 feet. It is 7½ feet high in front and 5 feet at the back, facing south, with a large door and two windows in the front, which can all be opened in warm weather, making it practically an open front scratching shed, or closed in cold weather makes a warm house. A dropping board 3 feet wide with roosts above is placed at the back. A curtain on frames swings from the ceiling to just below the dropping boards makes a warm roosting room for real cold weather. This curtain is hooked up during the day. A brooder coop and nest boxes are under the drop board. The four yards, two extending front (south) and two back (north), are 12x50 feet. Two of these yards are spaded up each year and planted with corn, sugar beets or rye. This purifies the soil, which would surely be poisoned by the droppings of the birds and cause some of the ills that chickens are heir to. When the plants are high enough that the chickens can't harm them they are let in and this makes an ideal forage ground. The fowls kept are White Wyandottes of a noted egg laying strain. The aim is to get the chicks out early and get them laying before cold weather, so a 60 egg incubator is run in the house cellar.

Two colony houses, each 6x8 feet, are placed under the apple trees and a three compartment outdoor brooder is placed in each. Some chicks are hatched by hens to be sure of having pullets enough in the fall. Last spring from two sittings of eggs, two pullets and eleven cockerels from each was the result. The incubator chicks are placed in the brooders the second day after being hatched, the floor covered with cut clover and a dry grain chick food scattered in the litter. Grit, charcoal and water are placed before them and they are kept on this diet for 6 or 8 weeks. After the fourth day a little beef scraps is given and gradually increased until they have it before them all the time. They are given the run of the house on stormy or cold days and on bright days the run of the whole lot. When they are inclined to want to roost on the brooder it is taken out and low roosts are put in. Now a five compartment hopper is placed in coop containing dry beef scraps, cracked corn, wheat, bran and grit, which is filled as fast as needed. Charcoal and fresh water is furnished at all times. Now they are left to run and grow and they do grow with food where they can get it at any time, and plenty of shade and grass. As soon as the cockerels can be picked out, they are put in one of the colony houses in a small yard and the pullets in the other and let run. The cockerels are fed with about the same grain, except that it is ground fine and fed dry from the hopper. The beef scraps is continued and they get all the grass they want.

PARLOR POULTRY YARDS, F. C. Tabor, Prop., Worcester, N. Y. Tabor's 200-egg strain of R. C. B. Leghorns lead, others follow. At Madison Square Garden, Jan., 1905 1st cock bird in the strongest class ever shown at the great World's Fair, St. Louis, 1904, 4.6 hen, 6th pullet, 2d pen. Eggs from special matings \$1 per 13. CHOLERA

IS THE
DEADLY PLAGUE

OF THE

Poultry
Yard

CHOLERA and its kindred diseases, Indigestion, Bowel Trouble, Diarrhea, Dysentery, Sour Crop, etc., attack alike the young chick and the old fowl. Thousands upon thousands are lost each season from these causes and the year's profits dwindle to nothing.

Conkey's Cholera Cure

is the result of years of our most careful study and research and is GUARANTEED by us to be an absolute and immediate cure for these diseases. You cannot afford to be without it.

It may save you a large amount of money this season.

It is given in the drinking water and requires no labor on your part.

It is tasteless—its presence cannot be detected by the flock.

It is eagerly taken, as fowls with these diseases are very feverish.

It is not expensive—a little goes a long way. It is good for Turkeys as well as fowls.

It is harmless and will not injure sick or healthy fowls.

It is guaranteed by us to satisfy you—if it fails, your money back—no questions, just money.

Don't fail to try this wonderful remedy. Send for it to-day and be prepared to check these troubles at their first appearance.

Given occasionally it is a sure preventative. If your Druggist or Poultry Supply Dealer cannot supply you, send order direct to us. We will forward on first mail.

Price, 50 cents per box, post-paid.

Petaluma Incubator Co.

Petaluma, Cal.

This system gives nice plump birds to eat. At about four months old they are gradually sold off or eaten, none being kept, as each fall a cockerel of a famous egg laying strain is put in the breeding pen. In September, the pullets having rounded up in fine shape, are put in the house and when they begin to lay are culled out; twenty-five of the best layers are kept to make the winter eggs. The pen floor is covered eight inches deep with straw and three times a day wheat, corn or oats is thrown in and they have to scratch to find it, giving them needed exercise. A hopper of beef scrap and one of dry bran with a little salt added is kept before them all the time. Potatoes, carrots, turnips or other vegetables chopped fine or steam cut clover. Cut clover fed in a trough and with a cabbage head hung up or a sugar beet cut in half furnished the green food in winter when no grass is on the ground, with fresh water warmed in winter, cool in summer.

The dropping boards kept clean; the house thoroughly whitewashed; kerosene, lice paint or lice powder used freely and a good dust bath furnished, they cannot help but keep in good health, which means lots of eggs at the time when wanted most. The second year these birds are culled again, fifteen of them are placed with the new cockerel in the other pen and form the breeding pen from which the future layers are raised. The old breeders are sold off and this system followed year after year. By this system of care and feeding they get lots of eggs when prices are high and the neighbors who keep hens but don't

take as good care of them are very willing to buy strictly fresh eggs. The health of the birds is nearly perfect, no bowel trouble as chicks and a constitution that is pretty hard to break down.
Elgin, Ill. C. E. RINEHIMER.

HOW TO CARE FOR JUNE CHICKENS.

So many have said they could not succeed in raising June-hatched chickens, but I suppose they let them care for themselves. I find that to be successful with June chickens, I must take care of them. The first thing necessary is a proper place to keep them. I have coops and nice runs for the hens to be confined in and after the chicks are old enough I let them run out after the dew is off the grass—never let them out in the wet weeds or on damp days. I feed them plenty and give them small grain in straw or litter on the bottom of the pens. I lift the pens around to clean ground every morning and never allow the ground to become damp. If it rains and causes the pen to be damp, I take ashes and lime, throw all in the pen and sweep off until the ground soon becomes nice and dry.

I go at night and see that each hen is in her coop with her brood, and that they are not sleeping in a draft to catch cold, and get the roup. I never use a chicken that has ever shown any symptoms of roup. I use the best remedy, the "ax," if I find any in that condition. I clean coops out every other day and sprinkle with fine pulverized lime, also keep them well painted with Lee's Lice-killer to keep them free from lice.

I have a large flock of June chickens and have, so far, succeeded in raising every one of them and they are all healthy and growing as fast as the earlier chickens and will make nice pullets and cockerels when they are matured. I can tell the cockerels from the pullets and will soon separate them, so I can give them more care. I never allow young chicks to be crowded, for, if they do, they tramp on one another and perspire, so that soon they are stunted and not worth anything. Lice, filth and laziness are three drawbacks in the poultry business. There is little more trouble raising every chick hatched the latter part of June than those hatched in March or April. I never let the hen and chicks out until they are old enough, then never let them out until all the dew is off of the grass, about eleven o'clock each day. If, on damp days, I move them to one of the houses, and keep them warm and dry; the best of care must be given them to keep them all healthy and growing. I scald and wash out their drinking vessels every morning and fill them with fresh, clean water; then at noon I go around to each vessel again and fill them with fresh water. I give them plenty of oyster-shells and fine ground bone meal. By watching all the small things in poultry raising, I succeed in raising all the late chickens I have hatched. I had a hatch in the incubator come off June the 28th with bright, healthy chicks. I still have that number only a great deal more bone and muscle to them than when first hatched. I have with hens, 145 June chicks and they are doing fine

Monett, Mo.

MRS. WM. BRITE.

The Tender Life of the Newly Hatched Chick

is strengthened by our scientifically mixed seeds and grains which induce exercise, and by their great variety and wholesome condition put on flesh and muscle quicker than any other food on the market, while preserving health. "Wholesome" means much when applied to

CYPHERS CHICK FOOD.

It means that the whole, sound grain is used and that none of its valuable constituents have been removed. It is all there because we manufacture in our mill nothing but poultry foods—no breakfast foods nor stock foods to consume the better part of the grain and leave the refuse for the tender little chicks that have not the strength to digest such coarse, fibrous products.

We grind, mix, sack and seal all our Foods. For the protection of our customers our Ready-mixed Poultry Foods are put up in sealed bags, bearing our Trade Mark, each bag being sealed with a lead seal with the word "Cyphers" stamped on one side and the word "Buffalo" on the other. Customers should refuse all bags which do not bear our seal, also those on which the seal has been broken or removed.

New York Winners Reared on Cyphers Food.

"I have used Cyphers Chick Food for two years with record-breaking results. All my New York winners were reared on this feed, and I shall never attempt to raise chicks without it in the future."

C. H. WELLES.

Lost Not One Out of Four Hundred.

"We have used nothing but Cyphers Chick Food for our young chicks. Have not lost one out of more than four hundred. Neighbors have used other foods and lost many chicks. Yours is the best food on the market. I would not think of trying to raise chicks without it."

MRS. MARTHA J. RHONE.

ANALYZED AND FOUND AS GUARANTEED.

It is the duty of Government Experiment Stations to analyze licensed feeds to determine their value and discover if they come up to their guarantees. In these tests the Cyphers Company poultry foods lead all others in their reliability. The Wisconsin Agricultural Station at Madison, Wisconsin, recently tested SEVENTY feeds offered for sale by different firms not from samples furnished by the manufacturers, but, as the station reports, from "samples found on the market, that is, either collected by inspectors or forwarded for examination by private parties." After analyzing the foods these noted Government Analysts reported that CYPHERS SCRATCHING FOOD IS "ENTITLED TO SPECIAL MENTION" from the fact that it "CAME UP TO THE MANUFACTURERS' GUARANTEE FOR PROTEIN AND FAT CONTENTS." It may be well to note that the protein found in this food was 1.47 more than we guaranteed.

SEND FOR FREE SAMPLES OF Cyphers Chick Food, Cyphers Forcing Food, Cyphers Scratching Food, Cyphers Laying Food, Cyphers Clover Products. These foods are the Standard for Poultry Foods and are recommended by the most successful poultry keepers. They save trouble and add profit.

SUPERIORITY OF THOROUGHbred POULTRY.

I have frequently been told that the ordinary mongrel poultry, which is not even "thoroughbred scrub" stock, would under the same treatment yield just as good results as thoroughbred chickens. My experience, during the past winter, as it bears on this question, may be of interest to others, though it will not probably surprise experienced poultrymen.

A year and a half ago, I bought six mongrel hens and a very good Barred Plymouth Rock cock. From this mating, I kept four pullets hatched in May, and I bought two more pullets, perhaps a little older. From the same stock as my Plymouth Rock cock, I got five pullets and one from another strain of the same breed, all hatched in April and May.

As I was living on rented property and expecting to move to my own this summer, I could not afford a great outlay on poultry fixtures, so that although the winter was very severe for this climate, I could only give my fowls fairly tight and small houses with no scratching sheds, etc., for bad weather. They had no green bone and only occasional meals of meat cooked or raw. In the matter of housing, feed, etc., mongrel and thoroughbred fared alike. So much for the conditions, now for the results.

My Barred Rocks commenced laying Dec. 3d to 10th, there being only about a week's difference between the May and April pullets. They averaged an egg apiece every other day, till about Dec. 20th, when the coldest weather of the winter and the necessary confinement during several days of snow stopped them for about ten days. Both my cocks had their combs frosted. With the new year, however, they went to work and in January I got a hundred eggs from this pen. Severe weather in February again interfered with their laying and I got only fifty eggs for that month.

In March, although two of the pens were sitting most of the month and I lost one by an accident, I got sixty-seven eggs. In April, two being still at work out of the pen, I got fifty-six eggs. In May there was a general tendency to be broody and I used two more as setters, but I got sixty eggs from the three that were laying. Under better conditions no doubt, much better results could have been gotten, especially for December, January and February.

The pen of mongrels gave their first eggs about the middle of March, but few of them did not begin to lay till April 15th. Several of them have already been broody and though I have used only one for incubation, they have hardly averaged an egg apiece every other day.

When it is taken into account that for the three months of December, January and February, during which the mongrels were idle, the price of eggs in the local market averaged nearly thirty cents and that since March 15th it has not averaged more than fifteen cents, it will be seen that in this case at least the thoroughbreds show a decided superiority as utility birds. I am arranging

RESULTS COUNT.

If the number of machines sold from the factory direct to the customer and an unusually high degree of satisfaction expressed by the purchasers of these great numbers, then surely Sure Hatch Incubators and brooders for the season of 1905 stand at the top of the list as successful machines. Sixteen thousand Sure Hatches in four months were shipped out of Clay Center, Neb., going to every part of the civilized world. Every one of them were sold under an absolute guarantee as to construction and work, and not a single machine has been returned because it failed to make good what was claimed for it.

The Sure Hatch may well claim to be the standard of excellence in incubator construction and in results produced. The great sales of these incubators and brooders are due entirely to the fact that they hatch and raise chicks more profitably than can be done with the old hen and with many other makes of incubators and brooders.

The American public is a discriminating buyer, and after being in business for eight years if the Sure Hatch proposition, "No better machine at any price and none as good for the Sure Hatch price," did not hold good, the American public would not buy Sure Hatches in such large numbers.

Nearly 80,000 Sure Hatch machines are now in successful use and they will be hatching chicks—hundreds of thousands of them—during the next two months.

The standard of Sure Hatch construction is never lowered. It is constantly being raised. The Sure Hatch catalogue tells all about the machines. Special prices are on for the summer months. A postal card to the manufacturers will bring to you full information concerning prices and the use of incubators and brooders.

THE MAY AMERICAN BOY.

Better and better, is the motto, evidently, of *The American Boy*. Nothing ever attempted in the line of literature for boys quite equals this sterling, high class monthly. Baseball is the key-note to the *May American Boy*, as is hinted on its front cover. The noted baseball player of olden times, A. G. Spalding, contributes the first part of a story of the origin of baseball. The fiction includes, "A Boy's Adventure with a Piru Condor," a Decoration Day story entitled "The Ministration of a Child," a fishing story, "Tow-Head and the Old 'He-One,'" the first chapter of a story, "A Page Without a Pull," whose hero is a page in the United States congress; an exciting adventure in the frozen north, entitled "How Adam Nugent Brought the Mail;" a story of humor, "The Conquest of Mickey McCloskey;" and a number of short stories under the titles, "An Equatorial Shark Catch," "In the Thick of the Fight," and "A Heaven for Lions." Further chapters of Kirk Munroe's "For the Mikado," "My Four Years at West Point," and "A French Frog and an American Eagle" also appear.

IS THERE ANYTHING IN FEEDING FOR WHITE BIRDS?

The Steinmesch Feed & Poultry Supply Co., St. Louis, Mo., are specialists in Chicken Feeds. Their Chick Feed is now the leader of all Chick Feeds. Their "Select" Hen Feed is the best on the market. Their Early Breakfast Mash is the best. Their Fattening Food is the best. Their Scratching Feed is the best, free from cheat. In fact, they handle only the best of everything. They now offer a suggestion, especially to breeders of White Birds, and that is *White Kaffir Corn, Broken Rice* and *"Winter Green" Alfalfa Meal*. These feeds will come nearer to holding White Birds white than anything else that can be fed, and the prices are very reasonable. See ad on another page. Free samples and free catalogues.

The army that knows how to shoot is the army that crosses the enemy's trenches and we rejoice to read in *May Outing* that marksmen are being made of our militia and regulars. Lieutenant Frank E. Evans tells of the contests at Creedmore which are fast inspiring our men to become crack shots. His photographs are most realistic. No monacles or flapping banners there, but a long line of rusty clad chaps lying on their faces with one eye on the ever changing wind and another on the small dots of white in the level distance.

Classified Ads.

Under this heading ads will be inserted for five cents per word each month for less than three months, **three cents per word for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. Commencing with the January, 1934 issue, all ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** is furnished every advertiser during the time his ad is running. **Forty thousand per month.** We guarantee an average monthly circulation of 40,000 copies of **AMERICAN POULTRY JOURNAL.** When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

E. H. GAINES, Prop., GAINES' POULTRY YARDS, GAFFNEY, S. C.

Acme Triple Burner

Cut Incubator Expenses IN TWO

ACME SPECIAL BURNERS are made in two sizes, No. 1 and No. 2. No. 2 makes more heat and light than any No. 3 burner, and uses 20 per cent less oil. The **Acme Trip Burner** saves 1/2 the oil because regulator turns flame up or down. Can't overheat or char the wick. It requires no trimming, is twice as thick as other wicks, and encased in seamless metal tube with composition burner tip. No smoke, no soot, no offensive odor. These wicks are for **Acme Burners** only, and last 30 to 60 days for incubator use and 12 to 18 months for ordinary house use. **Acme Burners** fit any lamp. Give size of lamp collar when ordering. The **Acme Automatic Gas Valve** saves 75 per cent of gas for incubator use. Regulator turns flame down or up. Burner tip can be located any distance from valve. **Acme Burner** with wick, either size, prepaid, 75c. **Acme Trip Burner** with wick, either size, prepaid, \$1. Extra wicks, either size, prepaid, 10c each, 3 for 25c.

ACME AUTOMATIC LAMP AND COMPOUND REGULATOR

will make your old machine do better than it ever could do, besides save you many dollars and much annoyance. Its combined damper and flame regulation alone saves half the oil. Its burner saves danger from fire—can't overheat. Its wick saves trimming—never needs it. Its regulator controls both flame and damper (see cut); this avoids too high or too low a flame. It makes hatching or rearing pleasurable and profitable. Sold separately or together. Fits any machine; any one can attach it. Send for catalog giving detailed description and our full line of fixtures, including illustrated plans for building the famous Peerless Incubators and Brooders. Nearly 100 photographic views showing step by step every stage of incubator construction. This book is worth a good dollar of any man's money and is sent merely for the asking. Write your name and address on a postal now and mail to us.

Self regulating and guaranteed to hatch as large a percentage of eggs as any other hatcher at any price. Send for the free illustrated catalogue with 14 colored views. GEO. H. STAHL, Quincy, Ill.

"MONEY in POULTRY."

Our new 84-page book for 1905 tells how to make it; also how to breed, feed, grow and market your poultry for best results. This book probably gives more reliable information about the poultry business, obtained from actual experience on the largest farm in America devoted exclusively to the rearing of pure-bred poultry, than any other book published. Describes and illustrates 25 varieties of our pure-bred fowls. Quotes extremely low prices on stock, eggs, incubators and brooders. Mailed for 4c in stamps.

FRANK FOY, Box 50, DES MOINES, IOWA.

60 Days' Sale of Golden and White Wyandottes

I offer about 400 head of our this year's breeding birds at less than one-half price out of our this year's matings. This is a rare chance to get some of America's best birds. Our birds have won thousands of premiums at the leading shows for the past eighteen years, including World's Fair, Chicago, Boston, Philadelphia, Buffalo and 300 premiums at Madison Square Garden, New York. If you want fine birds at a great bargain I can supply you. Eggs now from our fine matings \$1.50 per setting straight. Large circular free.

Send 2c stamp for circular containing origin, descriptions and Standard of this noble variety.

System in Poultry Practice

BY JAMES Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 13 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assiniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON,

Box A 12, Milburn, New Jersey

HOUDANS!

For more than thirty-one years Rigg's strain of Houdans has been the acknowledged standard of Houdan excellence by all Houdan breeders and exhibitors at ALL the leading shows of New York, Boston, etc., have drawn largely upon this strain. The record made by the Rigg strain during all these years has never been approached by any breeder.

Mr. Thos. F. Rigg, Iowa Falls, Iowa.

Driftwood Farm, Girdlestone, Md., Dec. 17, 1904.

Dear Sir:—In 1898 I obtained in Colorado three Houdans that were purchased of you. I took them to Brazil, where they were practically unbeaten by the best English strains, to say nothing of breeding a lot of youngsters that hustled their Minorcas in egg production.

WALDO KENNARD.

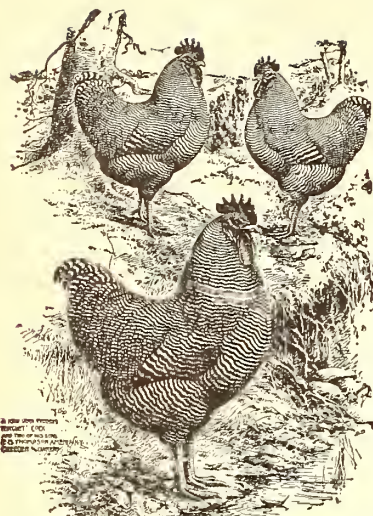

This is the kind YOU want—the large, vigorous, egg-producing, show winning kind. More than 31 years of careful, systematic, line-breeding has given us this magnificent strain of Houdans.

EGGS FOR HATCHING THAT WILL PRODUCE SUCH STOCK

We have no special pens in reserve for ourselves and other pens for our customers. The same pens that supply us with our many winners and magnificent breeding birds, supply our customers with eggs. Price of eggs \$3 per setting, two settings \$5.

THOS. F. RIGG

IOWA FALLS, IOWA

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup, presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

in any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$3, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amsterdam, Dutchess Co., N. Y.

2 Settings, \$8.	5 Settings, \$15.
Per 100, \$20.00.	

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned. * * * * *

Winners at New York, from Life.

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes on 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at Boston, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at Honest Prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

We Can Teach You How to

RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical, poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet; 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's. Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

Rose Lee, a Chicago Winner

Barred Rock Headquarters

We now offer for sale our 1905 breeding yards. Greatest winning flock of last season. They are winners bred from winners, and will breed winners. They won't last long so your "better hurry" and write your wants. 34-page catalogue for stamp.

R. E. HAEGER & CO. Algonquin, Ill.

White and Barred Rocks.

Partridge and White Wyandottes, Mammoth White Holland Turkeys and Imperial Pekin Ducks. Our birds are winners at Chicago, Cleveland, Indianapolis and Illinois State Shows. We have three yearling and two young ones at \$5 each. No females. Eggs \$2.50 per 15, \$5 per 40. Turkey eggs \$5 per 12. Write your wants. We guarantee satisfaction or return money.

Stryker Bros. Box 204, Plainfield, Ill.

Vass' Buff Orpingtons

are still in the lead. Will offer eggs at half price because of season. All my breeding stock for sale in Buff and Partridge Wyandottes. Prices lower for the quality. Write for prices. Circular free.

C. E. VASS, Washington, D. C.

ORPINGTONS

BUFF, BLACK, WHITE

and 1905. Unprecedented offers in young stock for October 1st delivery. If ordered now. Eggs half price. Elegant catalogue free.

C. S. BYERS, Box 42, Hazelrigg, Indiana.

PURITY STRAIN SINGLE COMB WHITE LEGHORNS

are the "Practical man's friend and the fancier's delight." Do you want a strain of fowls that keep continually laying large white eggs from the time they mature until death? Do you want a strain that win the blue wherever shown, as well as being the greatest egg producers known? Do you want a white fowl that stays white, no matter how hot the sun shines upon them? If so, here is your chance. I will spare about one hundred of this year's breeders at reasonable prices.

JOS. A. BURKHART

State Vice-President National S. C. White Leghorn Club.

SMITHSBURG, MD.

SPECIAL SALE

To make room for the several thousand Fishel White Rock chicks now growing to win the coveted prizes this fall and winter, I am offering FOR SALE at SPECIAL PRICES something like one thousand selected breeders, choice exhibition birds and several flocks of excellent UTILITY FOWLS. I realize you want the best blood obtainable, therefore

Fishel's White P. Rocks

are sure to please you. As exhibition birds they stand without an equal. Did you ever consider the excellent record made by the Fishel White P. Rocks? They have won the leading prizes at St. Louis World's Fair (17 prizes, being double the amount of prizes won by any two other White Rock exhibitors, and they were all there East, West, North and South), Chicago, New York, Indianapolis, Great Crystal Palace and Dairy Shows, England, Memphis, Atlanta, Hagerstown, Pan-American, Cleveland, Los Angeles, Fresno, Dallas, New Orleans, etc., while as utility fowls they stand without an equal. In fact any place you put the Fishel White Plymouth Rocks they are acknowledged.

"The Best In The World"

Why buy stock you know nothing about when you can secure line-bred birds for the same price. My new 48-page catalogue with special sale price list is mailed on receipt of 6 cents in stamps. This is the most elaborate Poultry Catalogue ever issued. Write me your wants, please, or send for list.

EGGS FOR HATCHING \$2.50 per 15.
\$10.00 per 100.

U. R. FISHEL

Box A, Hope, Indiana

Good Trades in Good Breeders

During July and August we shall offer bargains in all breeding and show stock. Among the birds to be sold will be some of our very best breeders and show birds. This list includes:

First Barred Plymouth Rock Cock at the St. Louis Exposition

" " " " Pen, Male, " "
" " " " Ckl., New York Show, 1903

Besides, we have some exceptional yearling males from our best sires that are fine specimens, but were not quite mature for the winter shows; also many of the fine females that composed our best pens. All these at very reasonable rates.

IN S. C. BROWN LEGHORNS

we offer some very rich colored males and some strong breeding females for cockerel breeding.

THE QUESTION OF COLOR MIXING.

Under-color of Vital Interest and Importance in the Production of Plumage Color and Markings—The Fancier Must Mix His Colors as Does the Painter and Artist, Being Governed by Natural and Unyielding Laws.

[While Mr. Harrison has directed his argument mainly in the line of Partridge Cochins coloring, his article brings up the question of the effect of undercolor in the production of all parti-colored fowls. This mixing of color matter to produce desired colors and shades is something which has heretofore been given little attention, either by the breeders or the standard makers. It is indeed an important matter, and we hope that fanciers will give the question a thorough discussion in these columns.—THOMAS F. RIGG.]

TO THE EDITOR AMERICAN POULTRY JOURNAL:

A man of very wide experience and probably as keen an observer as there is in the poultry world, recently made this remark: "If one hundred men were each given a good flock of Partridge Cochins within five years ninety-nine of them would have their flocks ruined."

A writer in a recent issue of the *American Fancier*, mourns because many are already dropping Partridge Wyandottes, on account of the difficulty of breeding choice specimens.

About eighteen months ago the publisher of this journal asked the writer if there was anything he knew about breeding Partridge Cochins that he would not be willing to tell the readers of the AMERICAN POULTRY JOURNAL. Being answered in the negative, and assured that the love of the variety far exceeded any selfish interest as a breeder, Mr. Bates requested an article for the January number, 1904. His last injunction was: "Put in as many things as you can that have never before appeared in print—secrets of the trade."

Soon after the appearance of the article the writer received a number of letters from old breeders of Partridge Cochins, agreeing with the points made, some even hinting that some of the statements in the article it was just as well not to make public.

Within sixty days after the article was printed a new breeder of Partridge Cochins, who has gained considerable notoriety during the last three years, on account of prizes won at some of the leading western shows, had articles in two journals, telling how to mate Partridge Cochins. He said he produces exhibition pullets and cockerels from a single mating, using males with dark undercolor.

Another man has published two articles this spring on Partridge Cochins. He is an "old timer" and should know better but here is a quotation from his article in *American Fancier* of March 11: "The present demand for Partridge Cochins makes the use of double mating unavoidable if we hope to produce the best. You must have a line for males and one for females, and never crossmate or intermingle the blood lines for the males; do not pay any attention to the color of the females along exhibition lines. Work for the color of the male, and mate the females of this line to the best colored males all the time, and keep the largest and best of these females for producing exhibition males. By so doing you will build up a color line for producing males that will give better color results each year. We have seen this continued until every feather on the back had a black center, the same as the saddle feathers, and some of the females from such matings had almost black breasts and a hackle almost like the male in color."

Now, I do not refer to these cases to make any personal criticisms, nor because their methods are entirely different from mine. Neither do I refer to them because I know that they are wrong, and that I am right, and can prove it, but because this

involves the whole question of undercolor, and I want to discuss that in this connection.

I have been told by several persons who have visited the poultry shows and poultry yards of England, that the English breeders excel the breeders on this side, in the richness and brilliancy of the color of their fowls; and that they practically ignore the question of undercolor in the show room. We have much to learn from our neighbors across the ocean.

We have, a foolish craze in this country for undercolor. I have not heard of any one being excluded from full dress functions because of the color of his underclothes, but if the ones who set up the standard of dress, were of the same mind as those who make our standard of dress for our fowls, it would be obligatory on one to wear a certain shade of underclothes. Many fine birds dressed in royal robes of the most correct and exacting styles, are debarred from the company of their inferiors, because their underclothes are not the shade some one thought they should be. To an outsider it must look mighty silly.

Did you ever examine the undercolor of a parti-colored bird of gorgeous plumage, whether from the tropics or from our own woods? Did you ever see one with a very highly colored surface, that had an absence of white in the undercolor? No, sir, and you never will.

Did you ever look into an artist's box of colors? Did you notice that his tube of white was larger than any other? Did you watch him paint, and notice how he would mix white in most of his combinations to produce the desired shades? Do you think he could take some red, brown and black paints, and without any white, mix them until he produced a rich mahogany? If you think you can do that, just try it! After a few trials you will wake up to the foolish proposition of having a standard require you to get that result, by mixing colors with your birds and not use white.

There is not a Partridge Cochins breeder in America who claims to produce fine birds of both sexes from dark undercolored males that would want you to go through the files of the express office at his town and let you find out just where his exhibition females did come from. No one can get rich mahogany colored pullets from a dark undercolored male. With an absence of white the colors will not mix and make mahogany.

When I began to breed Partridge Cochins in 1875 the poultry journals contained articles as they do now, saying as the above writer does, that it is necessary for best results to have two pens, one for each sex. I have never bred that way and I never shall.

A man with a pen of Partridge Cochins sends to a breeder who grows his birds on the double mating plan, \$5 for a cockerel for new blood. I wonder if there has ever been a case where the breeder wrote back and told his customer that he could send him a cockerel that would not give him one single pullet that a lover of the breed would have on his place over night, or he could send him one that would not produce one good cockerel in a season's breeding, and ask him which he would prefer? Is one treating a customer honestly if he does not so write?

In my early days as a breeder I got some fine Black Javas. In two years my chicks came with red necks. After eating those with red necks I only had one cockerel left with a black neck. He had considerable white on him. The chicks raised that season were very fine and it taught me a lesson. I never had any more red necks on my black fowls. That experience caused me to lose all fear of white undercolor on my Partridge Cochins.

In going through the files of the poultry journals for the past thirty years you can make a list of hundreds of men and women who once bred Partridge Cochins who do not breed them now. True, tastes will change, but you never saw one of them that

will not now become exceedingly enthusiastic over a fine Partridge Cochin, and tell you that no fowl is more beautiful than a well bred Partridge Cochin, none better on the table, none more easily cared for, none that will stand confinement better, or lay more dollars' worth of eggs in a year, but it is so hard to produce fine specimens.

It does not matter how many breeders object to my position. Anyone may prove which is the right way by trying.

If you will take a standard female and a male with rich dark standard surface color, but white undercolor, you will get half of the pullets show birds and one-fourth of the cockerels show birds. Your most valuable males you cannot send to a show on account of some crank making a motion and a lot of disinterested men voting yes, without knowing why they did it. But never mind, keep on breeding and you can show a

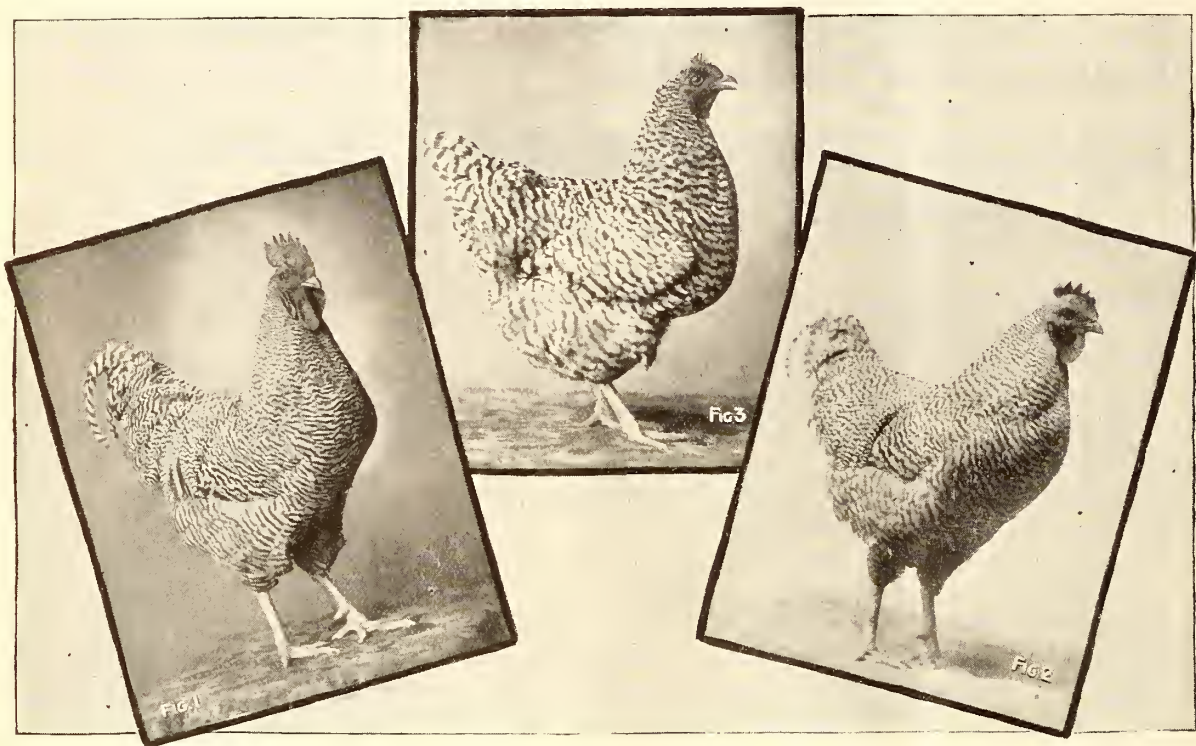

flock such as the one who breeds on the double mating plan never dreamed of owning.

Some writers say to use a male with light surface color for your pullets. If you do that you will spoil the ground color of your pullets. Mix in your light color by having white undercolor that does not show.

I have not bred Partridge Wyandottes, but my opinion is that this same way of mating will produce good results with them. I give this simply as an opinion, as I do not know by experience.

I am of the opinion that this question of undercolor is of the most vital importance in breeding all parti-colored fowls and I hope the day is not far away when one can take his best breeding birds into the show room.

W. H. HARRISON, JR.

BARRED PLYMOUTH ROCKS, AS BRED BY D. T. HEIMLICH, JACKSONVILLE, ILL.

STANDARD BARRED PLYMOUTH ROCKS.

In presenting the three pictures as taken from life I wish to call attention to some essential features that will be called for in the new standard for this variety. Fig. 1, a ten-months' old cockerel, presents in surface barring that is as near right throughout as has been my pleasure to raise or own. Here is the one uniform shade of color and also type of barring almost perfect, but few defects showing. The pose, showing him in a quartering position, does not show the arch of neck; also presents him lacking in breast development. The back, tail, depth of body and length of legs show proper proportions. The comb is a trifle high but points, serrations of proper number, and as a whole well balanced; earlobes and wattles of proper size and quality; beak showing a slight dark streak, which as a rule is indicative of plenty color pigment in plumage that has a well barred under color; eyes large, clear and bright bay. This picture will bear inspection, as it is presented just as the camera and a favorable light caught him.

Fig. 2 presents his sire, a male of the more open type of barring, yet clearly showing the evenness of barring, as the surface shows the regularity of the dark and light barring, giving that "ringlet" effect so desirable and that so greatly adds to the beauty of the barred variety. This specimen's sire was, as Fig. 1, darker and narrower barred. Thus Fig. 2 presents as a breeder of such females as presented in Fig. 3 and which was the winner of first place at the Illinois State Fair in 1903 in a class of over fifty pullets. She in form shows almost perfect, every section blending and harmonizing with every other in proper proportion. Fine head, elegant arch of neck, heavy at cope, a good back and tail, deep, broad

breast, proper length and depth of body, set on legs with straight toes, and in color clear yellow. Every feather has a dark tip. The dark and light bars are a trifle too open, but as each color stands out clear and distinctly the color defects are in the spacing of the barring more than the color as a whole. Fig. 2, as can be seen, thus proved himself a breeder of both good males and females in 1903-4. In 1903 he was mated to a few choice females, whose sire was a male in type and color of Fig. 1. In 1904 he was bred to hens narrow and clear barred, and a few of his own pullets with this same character of barring. With these he produced over 50 per cent choice males and females fit as breeders and for exhibition. I do not desire in making the above statements to leave the impression that this single mating method proves the success or mine and others whose long cherished wish and aim was to produce the highest quality exhibition specimens from a single mating a fully accomplished fact, but it did prove that by breeding related stock that came from carefully made double mating methods, where extremes in what was used as breeding stock had been cut out, that a judicious selection of mates would result in producing an equally high number of first-class breeding and exhibition specimens as are produced from the too common practice of mating extremes to get one sex light and the other dark.

D. T. HEIMLICH.
Jacksonville, Ill.

The poultryman who expects winter eggs from immature or stunted pullets is going to be badly disappointed. It requires good food, good care and a good steady growth from shell to maturity to develop winter layers. A little extra care and attention just now will be well repaid by the full egg basket next winter.

THE SUMMER CHICK AND ITS CARE.

The Best Methods to Pursue in Feeding and What to Feed—Clean, Well Ventilated Quarters an Absolute Necessity to Insure Success.

Written by Rev. C. E. Petersen, Franklin, Me.

A long hard winter and a cold wet spring has again delayed hatching operations, and pushed hatching and rearing of chickens farther away from the usually accepted time for this work, and we find by careful inquiry that at this writing (June) that most of our prominent breeders are still continuing hatching chicks, and that an unusual large number of orders for eggs for hatching are on their books for June delivery.

This means extra care and work to bring to maturity these late hatched chickens, but that it can be done satisfactorily, and is done every year, is proven at our winter shows, where many of the best birds were hatched during June and as late even as the early part of July.

The great thing to keep in mind when caring for late chicks is that feeding must not be carried out to the extent of being almost a cramming process, as the inevitable result will be to feed them off their feet, and therefore it really becomes the paramount issue in the raising of these late hatched chicks to see how fast we can grow them without "feeding them off their feet"—which means without injuring their digestion; and therefore we prefer to keep on the side of safety and not try to force them too fast, which would mean failure in the accomplishment of our object—maturing them before real winter sets in.

Food rich in frame-building material is therefore of first consideration, as the least approach to fattening will hinder bone construction so necessary at this period, so we must so balance our ration that the frame and flesh growth will keep in the right relation to one another. The first food is of much more importance than is generally realized, and especially so by the beginner in the business.

A mistake in the composition of the first food may make so much trouble that it will hinder our prospects of making the chicks take hold of life and begin growth as it ought to begin.

Thousands of chicks are killed every year by making this mistake, and especially so by causing looseness of the bowels by the feeding of a sloppy mess, that in some cases was called "moist" when it was nothing of the kind.

Another mistake frequently made and largely due to the teaching of so-called "poultry science" is to leave the chicks so long without nourishment that they are weakened in the very start, and when food is then finally put before them an impaired digestion is the result, but a mistake may also be made in the other direction by feeding more than is needed the first few feeds.

For the first few days you will find that the hen pays a good deal more attention to keeping her little ones warm than to hunt up a big dinner for them, and we should do the same.

Where brooder chicks are to be handled the question of warmth is one of considerable importance.

We have read heaps of rubbish on the question, and most of it by men that knew little about and cared less for the welfare of chickens.

Little chickens need warmth, and must have it supplied in the months of June and July, as well as in the early spring months, and any well constructed brooder will give the chickens a chance to suit themselves in this particular, the heat being graduated according to the distance they are away from the hover, but the warmth under the hover we keep about 100 degrees, and when the little ones need a little brooding they can run in under the hover and get it in a very few seconds, the same as under the hen, which keeps her temperature the same at all months in the year, and not subject to change. As long as artificial warmth is needed it must be supplied in the right amount needed, and the hen is our best guide in this matter.

As to what method to pursue in the feeding of little chicks and what to feed I have found in my own experience that the so often quoted advice, "Feed a little and often," is not true to the letter, nor conducive to best results, as in most instances this means hap-hazard times.

Feed the little chicks all they will eat up clean every two hours, and be sure that the first meal is given at daylight and the last at night as late as it can be given them, even if a lantern is necessary to do it with, as this is of much importance in the raising of late hatched chicks.

As to the feed used—wheat bread soaked in milk and squeezed dry and fed crumbled for the first few days have always given us the best results.

After the first few days we supplement this with fine grain mixtures, and are particularly careful to see that at least one-third of this mixture consists of hulled oats cracked fine.

The first feed should be made out of this grain mixture and also the last, and between these two feeds give soft food, which should be dry and crumbly.

We have for years used "Spratt's Patent Chick Food," and we do not know of any other soft food that will facilitate growth as this food will. It stands unexcelled as a frame builder and the chicks do not tire of it.

Bone dust is used to great advantage and where used with any degree of judgment it is almost impossible to "feed them off their legs."

Where the chicks are to be raised for exhibition purposes, and a little expense is of no consideration, after the chicks are four weeks old feed them once a day with a custard baked in the same way that you would make it for your own table use, only leave out the flavoring.

Green bone finely cut and fed sparingly so as not to induce looseness of the bowels is also an excellent frame-builder.

See to it that cold fresh water and green, succulent food is supplied in abundance from the very start.

And if water is given from the very first the little chicks will not overdrink and cause trouble.

Keep strict attention to green food and water; it is of great importance, and if late in the season you can get at a second crop of clover anywhere get the privilege to cut some of it, for love or money; put it in your cellar on the floor and cover with a foot or more of sand or clean earth, if sand cannot be obtained, and it will keep beautifully fresh, and when the first snow covers the ground you will lengthen out growing time a full month by feeding this almost fresh clover.

These little attentions are the secret of raising to maturity late hatched chicks and overcoming difficulties.

We, of course, have taken for granted that a moderately large run was provided for the late hatched chicks, where they would be unmolested by the other larger chickens; for success with late chickens is not possible except where they can be cared for separately, and all of them of the same size. I know of no better place for this purpose than a small fenced-in orchard. It is the ideal place for our purpose, furnishing everything in the way of shade and shelter.

Where this cannot be had a grass run with all the necessary shade furnished and large enough to not only provide green food, but so as to keep from being fouled by the chicks, will answer. And now a few words as to housing and we have done. Under no circumstances whatsoever put more chicks into one coop than would keep them comfortable and give them moving room on a rainy day.

A few rainy days will breed more trouble than any other thing to a brood of chickens, if kept in a too small coop, leaking and foul with the accumulation of even a few days' droppings, as it is next to impossible to keep such a coop clean during a rainy season, and the chicks would stand a better chance even if left outside to the tender mercies of a two days' rain storm.

Let the coop be large enough to provide for this contingency, and if only twenty or twenty-five chickens are kept in a coop 6x4 feet so much the better for their comfort and your success.

Such a coop will accommodate that many chicks till they are ten weeks old.

Perfect cleanliness in the houses is an absolute necessity, and this should be attended to daily, so there will never be any droppings left from one day to another.

The birds themselves must be examined frequently, and if there are signs of lice dust immediately with a good insect powder and keep it up every two or three weeks all during the summer.

Plenty of ventilation is also a necessity, and where chicks are kept in an orchard well fenced and free from intruders leave them to their own choice in the matter of roosting up until real cold weather sets in.

Any way keep the windows open in the coops during the summer season, and remember that hot, stuffy quarters are detrimental to a successful issue.

Keep the youngsters clean, busy and growing and you will never again say that late chicks are of little real value.

Separate the cockerels from the pullets after they get up to a good size.

DECIDEDLY WINNING COMBINATION.

How Some People Have Derived Health, Happiness and a Competency on the Poultry and Fruit Farm—Experience in Detail of Two Families Who Have Solved the Problem—Figures Showing Outlay and Income and Cost of Stocking and Operating the Farms—Favorable Testimony for the Small Farm Movement.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

In the May issue of the AMERICAN POULTRY JOURNAL we gave some facts and figures showing how an Iowa man has found poultry and fruit farming a winning combination. That article has brought us a large number of letters of inquiry. It would seem that there are a great many people in the cities and larger towns who are figuring on just such an enterprise.

Mr. David F. Rupp of Sidney, Fremont county, Iowa,

"Acreage of strawberries: Two acres in bearing; also have two acres in young settings, not bearing.

"Raspberries: Fourteen rows, set two feet in the row and rows six feet apart, and fifteen rods long. Same amount of young setting for future bearing.

"Gooseberries: Seventy-five bushes in bearing, fifty bushes not bearing.

"Blackberries: Twelve solid rows twenty rods long, six feet apart.

"Apple trees: Seventy-five trees. Last year first crop. Apple crop here last year was nearly a failure.

"Cherry trees: Forty-five bearing trees. First crop last year. Twenty-five young trees.

"Number of grape vines: One hundred and fifty.

"Cost of help for the year: For picking berries and other fruits, \$250; for other labor, \$50.

"We keep the Buff Cochins fowls. They are easy to handle, always stay at home, give us an abundance of eggs, and there is a big demand for eggs and stock for breeding purposes.

320-FOOT POULTRY BUILDING ON MAY R. POULTRY PLANT, D. T. ROOTS, PROP., CONNERSVILLE, IND.

sends us a report of his operations on six acres of ground for 1904, as follows:

275 bushels of strawberries sold for.....	\$750
Eggs for breeding purposes.....	280
50 bushels of raspberries.....	187
75 bushels of blackberries.....	150
60 bushels early cherries.....	81
40 bushels gooseberries.....	80
10 bushels currants.....	20
300 bushels seedling peaches.....	150
40 bushels apples.....	25
300 bushels sweet potatoes.....	200
50 bushels Irish potatoes.....	12
100 bushels turnips.....	25
1,000 pounds grapes.....	25
1,000 head early cabbage.....	80
\$150 worth of asparagus, early tomatoes, sweet corn, etc.	150

Total sold\$2,215

We immediately wrote to Mr. Rupp for details and particulars. He replied:

"I will add by way of explanation that we have some fifteen acres of land. We have more than six acres in fruit, but the six acres I have reported are all to bearing fruit and vegetables and was accurately measured. I will also add that the ground that bore this fruit I purchased some ten years ago. It was at that time covered with cockle burrs and other foul weeds, and had been cropped to corn for forty years. But I wanted a home in the country. This lay near town and was cheap, comparatively. I put two teams at work and hauled manure which I got in town for the hauling. By the use of this manure and the poultry manure I now have the ground filled with humus, nitrogen, potash and phosphoric acid, and every one is amazed at the great crops we grow. They all tell me we have the prettiest country home in Fremont county. We are happy and healthy and contented. I am 65 years of age and my son 23. We do most of the work."

Mr. Rupp has but fairly started with the poultry. Now that conditions are right this branch of the farm will be given more attention. The idea was—and it is in keeping with the good sense shown by Mr. Rupp and his faithful co-workers, his wife and son—that the farm should become well set to trees and shrubbery, ideal conditions brought

about before the farm was stocked with poultry to its full capacity.

These peoples' experience, here given in detail, affords an interesting study.

The cost of trees and bushes and plants to set out the same acreage as Mr. Rupp has can be ascertained by any reader if he will ask the information of his nearest reliable nurseryman.

* * * * *

Mr. C. S. Gorline, one of the best and most enthusiastic friends of the small farm movement, thus tells of the experience of one man who broke the chains which bound him as a city mechanic:

"Here is the experience of one man, told me less than a year ago, and what John Fisher has done may be accomplished by others. John was a city blacksmith—young, strong and intelligent, but dissatisfied with his lot. A born fancier; his love for his White Leghorn pets caused him no end of trouble with his too near neighbors. He was fond of fruits and flowers, and his little home—paid for by the sweat of his brow—was the best kept in the neighborhood. Year by year went by and John found himself with a family of four children. Increasing expenses made it impossible to lay by anything for old age. The eldest son, fourteen years of age, was well through the eighth grade, and begging to be allowed to seek employment. What to do under the circumstances worried John and his wife—worried them as thousands of other parents, under similar conditions, are worrying today. Many were the consultations held, and many were the plans evolved by these devoted parents. "We must have a farm," decided John, and the little home was advertised and sold. Eight miles from the city blacksmith shop—out beyond the suburbs proper—a little plot of ten acres was found and purchased; the price agreed upon being \$4,000. John had a little more than \$2,000 in cash, \$1,500 of which went to apply as a part payment on the new home.

"When I went in debt \$2,500," said John, "I did not see how on earth I was ever going to pay out, but we determined to risk it. I bought a horse and buggy, a wagon and a cow, and I hired a man for \$20 a month to work on the place. We had a little five-room frame house, a pretty good little barn, and a good well; there were twenty apple trees, and about as many peach trees on the place, and that was all. With the little ready money I had remaining, I bought—

100 two-year-old cherry trees at a cost of.....	\$25.00
100 pear trees	30.00
100 peach trees	25.00
25 plum trees, three and four-year-olds.....	25.00
50 apricots	25.00
Selected strawberry plants for ½ acre.....	100.00
Selected raspberry plants for ½ acre.....	50.00
Selected blackberry plants for ½ acre.....	50.00
Currants set out.....	50.00
Gooseberries	5.00
Selected grape cuttings.....	5.00

A total expenditure for planting.....\$390.00

"And then my money ran out.

"Each morning, winter and summer, I started from home at 6 a. m., and the boy drove me eight miles to my work, and came for me in the evening. It was pretty hard on us in the winter, but we stuck to it. As my means would admit I bought poultry netting, and the hired man and the boy built the runs and poultry under my directions among the little fruit trees, and my White Leghorns thrived and increased. I made enough at the shop to live and pay the hired man. Each year the flock increased and there was ever a ready sale at good prices for the eggs and surplus stock, and often at fancy prices, for before I left the city I had a start from the best birds I could buy.

"Three acres of our place was used for pasture for our horse and cow. Then I found it profitable to buy feed for the horse and we kept two cows. The first year we put in three acres of potatoes from which we realized nearly \$700; the second year we sold about \$50 worth of raspberries and nearly \$100 worth of strawberries. Then we had to have another horse, and the boy and the hired man took turns in going to market. By the end of the fifth year we had our place paid for. Then it was I decided to quit the business I disliked, and I left the blacksmith shop forever.

"I have been on this place ten years and you can see what I have accomplished. We now have a good eight-room brick house, a good barn, and thirty houses and runs in which we keep nearly 500 White Leghorns.

"Here are the figures of my last year's business:

Sale of eggs for hatching	\$ 250.00
Breeding stock sold.....	200.00

Market eggs sold	1,050.00
Strawberries marketed by the crate.....	1,000.00
300 quarts of gooseberries	15.00
400 bushels of cherries	600.00

Leaving a net profit of

 \$2,740.00 |

"We have had a large portion of our living from the garden, the fruit, green, ripe and canned, the butter, eggs and fowls, and we have lived well. When the children need clothes and new shoes, we have the ready cash with which to pay for them. We raise our own pork and kill an occasional beef. We are always busy. Each of the children has an allotted share of the daily work. The eldest boy and the hired man do most of the work, allowing me time to attend to the marketing and to generally oversee the work. Everything is orderly, we are never hurried, and better than all, we have a neat sum in the savings bank. We pick the most of the berries ourselves; the rest are picked by our neighbors on shares, which materially reduces the cost of picking. I would not consider an offer of \$10,000 for our little farm today."

"Here was a total investment of about \$2,000 in actual cash that in ten years had more than paid for itself, and for the improvements, besides leaving a substantial margin as net profit. Here was a combination that is hard to beat—poultry and fruit. The growing chicks are allowed the range of the small fruits which are in no wise damaged by them. The bushes furnish shade and the chicks keep down the insects, and among the raspberries, gooseberries, blackberries and currants the chicks thrive.

"The fruit trees grow in the runs of the adult fowls; the droppings of the fowls enrich the soil in which the trees thrive, and the fallen fruit is consumed by the fowls and converted into eggs. There is consequently no waste."

* * *

It will be noticed that both Mr. Rupp and Mr. Fisher have worked hard for the success they have achieved. Now, they have the problem solved and are financially independent. As Mr. Rupp says, they "are happy, healthy and contented." And what more can a man do for his family—what greater blessing can he bestow upon those dear to him?

There will be failures in the poultry and fruit farm management in the future as there have been in the past, but it is a proposition rich in reward for those fitted for the business.

THOS. F. RIGG.

The show room is the place to prove the quality of your stock. The people who buy want to know what the judge says, not what you say. Now is the time to start to prepare your fowls for next winter's shows! Select the promising looking chicks and give them the care and attention they should have. You cannot prepare a bird for the show room in two or three weeks.

When you see a poultryman begin to get lazy and neglect his fowls it is a sign that the end of his career as a poultryman is not far distant.

The breeder who makes the greatest progress and improvement is the one who can see the good points in the other fellow's birds as well as those in his own. Every one cannot do this.

The hen that moults early is the one that will make the best winter layer. This is a desirable trait, and such birds should be bred from and encouraged in early moulting by giving them food best suited to the purpose.

It is not possible to make a rule for feeding which can be literally and persistently followed. The idea is that no fowl or lot of fowls will eat or require the same amount of food each meal.

Do not be deceived into believing that practical qualities and money points cannot be bred in the same bird. This is a favorite cry with some people who can't raise good ones and who want to sell their culls.

MOLTING.

Nature's Way of Renovating Fowls—Some of the Important Things to do During this Period.

This shedding off of the old and often weather-beaten feathers and the subsequent growth of an entire new coat is probably the severest strain to which all fowls are exposed. There is a greater mortality during the process of moulting than at any other period of bird life.

As a general rule all fowls are subject to an annual moult. This begins in nearly all cases at the close of the breeding season and is fully accomplished, conditions being favorable, in a period ranging between eight and ten weeks.

It will be found by examining the surface of a fowl's body that the feathers grow in various patches with intervening bare spots, or, if not bare, places covered with soft down.

No two fowls look alike while shedding. Some seem to lose nearly all their feathers at once, and hence present a very ungainly appearance, while others accomplish the change more gracefully, and these show various bunches of new feathers in different places, surrounded by the old faded ones.

The quill feathers are shed in pairs, except in ducks, etc., which lose all their quill of the wings at once; hence they

fowl is the ripe seeds of weeds, grasses and grains; also ripe fruits of various kinds, together with tender green herbage, bugs, worms, etc. These all together make a balanced ration.

Water fowl require all the above named foods with the addition of young fish, clams, frogs, etc., but where a large number of fowls are kept on comparatively small premises the natural supply of food will not be sufficient, so it becomes necessary for the poulterer to supply these foods in the form of some substitute in greater or lesser quantities, according to the natural supply, and the closer he follows Nature's plan in manner of supplying these foods, as well as in the variety and quantity of food supplied, the better it will be for his fowls and the more pleasure and profit there will be in owning them.

A good mash for moulting fowls is made of wheat, bran, linseed, meal and cut bones all mixed together, using twice as much of the bran as of the other two foods, and these in lesser quantities in successive order as named above. Twice as much meal as bone. The whole should then be moistened with skimmed milk. This should be fed once a day, preferably in the morning. The composition of wheat bran is as follows:

Water	10.30
Fatty matter	2.82
Nitrogenous substance (gluten albumen).....	12.48

BUFF ORPINGTONS.

First prize pullet at Chicago, January, 1905 and first prize cockerel at Chicago, December, 1904. Exhibited and now in the yards of C. S. Byers, Orpington Specialist, Hazelrigg, Ind.

lose the power of flight for a time—i. e., until the new quills are sufficiently grown.

The care of domestic fowls during the moulting period should consist in a continuation of the general hygienic treatment, which all successful poulterers practice at all times and seasons of the year. It must be remembered that nearly all our domestic fowls not many years back were wild birds and that they have an instinct born in them that teaches them just what and how much to eat to supply the bodily demands whether it be for the growth of new feathers, the production of eggs or any other growth or repairs.

Four important points in caring for poultry during the moult are:

1. The separation of the sex, especially should cockerels be kept away from moulting hens. This is not so important in regard to water fowl and turkeys, as the young of their species do not develop as rapidly as chickens.

2. Facilities for natural exercise. If the fowls are to be penned they should have their food supplied to them in some manner so as to compel them to exercise in securing it. All healthy growth is in proportion to use.

3. A plentiful supply of fresh clean water should be always of easy access.

4. Keep gravel and other hard sharp substances where the fowls can help themselves at will; without this grinding material the fowl would soon die.

Food for moulting fowls should contain a large percentage of nitrogenous matter. For natural food for our dry land

Non-nitrogenous substance (dextrin sugar).....	6.80
Starch	22.62
Cellulose	43.46
Salts	2.52

The average composition of linseed is as follows:

Albuminous substances	24.44
Oil	34.00
Sugar, cellulose	30.73
Ash	3.33
Water	7.50

A large percentage of nitrogen in the form of albumen exists in the gelatin, which is the principal food value of green bones.

The average composition of skimmed milk is as follows:

Casin	40.00
Lactin, sugar of milk	05.00
Salts	.60
Water	54.40

This ration may be varied by using animal meal instead of the green bones. There are various other foods, such as blood meal, dried blood and several patent meat foods, which are all good. Cottonseed cake, linseed cake, rape cake and several other stock food cakes are all highly concentrated nitrogenous foods. Wheat and oats are the best whole grains to feed to moulting fowl. The oats is of a little the most nutritive value, as it contains more albumen. The best way to feed whole grain to moulting fowl is to scatter it among leaves, straw, etc., or, better still, among tender green herb-

age of some kind, so that the requisite amount of bulky food material may be mixed with the grain. This method also furnishes exercise for the fowls.

The gloss of plumage and intensity of color depends largely upon the quality of the food that is consumed by the fowl. While the food which the fowl consumes does not change the natural color of the fowl, yet it has all to do with the smooth, glossy, healthy appearance of the plumage. An experienced observer can tell on looking at a flock of fowls whether or not they are feeding on a well balanced ration.

The claim is made by some active poultry breeders that they have mastered the moulting problem and that they can make their birds moult at the time that suits the breeder best, and also that the period naturally required can be shortened. They claim that by a certain system of feeding, stimulating, etc., that the old feathers may be made to die and drop off at once, leaving the fowl nearly bare. Then it does not take long for the new plumage to mature.

While this may be done to some limited extent, yet poulterers who have the best interests of their fowls at heart will be cautious about using stimulants, etc., lest they impair the vitality and vigor of their birds, and as the only sure way to get pure and fertile eggs for hatching is for the breeder to own and care for the stock that is to produce these eggs, he may find that it will pay best to make haste more slowly and not use unnatural means to hasten the process of moulting, especially with fowls that are to be kept for breeding purposes.

MRS. FLORENCE JEFFRIES.

Cooper, Okla.

FERTILE EGGS---CARE OF CHICKS.

Mr. D. T. Roots, the White Plymouth Rock Specialist, tells Our Readers How to Get Fertile Eggs and How to Feed and Care for Young Chicks.

Almost every year the cry goes up from poultry raisers that the eggs are not fertile and at once the papers are flooded with articles on that subject. Some of them hit the nail on the head and others do not. Having given this subject a great deal of attention during the past five years, I will try and give what I think is the reason for such a variation of fertile eggs from year to year.

First of all, we must go back of the hen if we want fertile eggs. Apparently she may be in perfect condition, and so may the big, strong, rugged man you know; yet in a short time he may be dead of consumption. Trace his ancestry, and you will find out why he died so quickly. Trace the ancestry of the hen and you will find out why her eggs are not fertile and why, if sickness gets the least start in the flock that they die so easily. So I say that if you want good, strong-germed, fertile eggs year by year we must breed from stock that we can trace back for generations and know that rump and kindred diseases have not affected them. At this point I think I hear some of my readers say, "why the eggs from these same fowls were very fertile last season." Yes, and that remark proves my point.

When conditions are all favorable you may have a fair percent of eggs fertile, but when they are not the fowls whose ancestry had rump, colds and other troubles haven't vitality enough to overcome the adverse conditions, and so the eggs do not hatch. Therefore, one of the most important points is to breed from fowls who for generations had strong, rugged ancestors. In my own experience I find that the percent of fertile eggs does not vary but little from year to year.

Now, then, as to the feed question. Outside of the farmers' chickens the great majority of fowls are confined to pens or runs where they cannot get enough variety of food to lay a properly constituted egg. A hen is merely a transformer, just as a steam engine will drive a dynamo and produce electricity, so if you feed your stock a properly-balanced ration she will lay an egg that has the right proportion of flesh and muscle-forming foods to produce a strong, healthy chick that has a desire to live and grow. On the other hand, if she is not fed and had properly-balanced ration she cannot produce such an egg.

I have visited poultry plants where the main food was corn. Now a hen will lay a goodly number of eggs on an exclusive diet of corn; this has been proved by several experimental stations. So I say that the second most important point is to see that your stock is fed properly. The third point is exercise. I formerly thought that the only way to obtain this was to have large yards for the stock. I found, however, that you can produce fertile eggs in a small yard provided the hens are made to exercise. This is a

simple matter indeed. By feeding wheat, bright millet seed, oats and other small grains you can make them scratch enough to give them all the exercise they need. Another point that is not often considered is extra feed for the male bird. In each of my yards I have a tin cup tacked up against the wall so high that the hen cannot reach it; this is kept filled with feed so that the male bird can have all he wants to eat at all times. Still another point is the condition of females. I would rather have a hen too fat than too thin. Keep your hens in good condition rather than half-starved. As for the male bird, you never need be afraid of him getting too fat during the breeding season.

Now a few words about the care of the young chicks, especially those raised in a brooder. I don't expect the readers of this article to agree with me, and in fact even last year I would not have agreed with anyone who would write what I am going to say. I believe that we all keep our brooders too hot. My man who has charge of the incubators and brooders has always claimed that the brooders were kept too warm. This year I told him to go ahead and run them the way he wanted to and we would see how he came out on the first few hatches. In no case was the brooder allowed to go over 90° when the chickens were taken from the incubator. As a rule the heat in the incubator was dropped to about that point before they were taken out. They were then placed in the brooder and as soon as the heat went the least bit above 90° the lamp was turned low. The next day the heat was reduced under 90°, generally close to 85°, and within a day or so it was reduced to 80°. I was tempted several times when I would look in the brooder and see the little fellows bunch together and the heat to only 80° to turn it up, especially when they were not over three days old. I did not do it, however, but simply waited to see how long it would be before bowel trouble commenced among them. Very much to my surprise it did not appear, and I can say that out of all the hundreds and hundreds we have hatched that only occasionally was one troubled with that complaint, and I am sure that it was from some other cause than lack of heat. My brooders are all constructed with a 2-foot pane of glass in the top of the warm side, and they also have a window on the side next to the light. Before placing the chicks in the brooder it was covered nearly an inch deep with chaff and cut clover and their first feed was scattered in it. This means that from the very start they had to scratch and exercise for what they got and there was no time that their crops were overloaded. To this one point I attribute much of the success that I have this season in raising them. Within two or three days they were fed in the cold side of the brooder with the lid raised up, even though the thermometer showed that it was below freezing. This meant that they surely had plenty of fresh, pure air, and when they got the least bit cold they had a fairly warm place to go to. After the first hatch when I changed the chicks to other brooders I always left one of them in the brooder, then when I put the next lot from the incubators there was one leader (as I call him) to show them the way to the outside part of the brooder. I found this thing to be of great help, for he would run out into the open side and, of course, the others would follow him both there and back to the warmer part.

Now as to feed for the first ten days, I use a prepared chick food with the best of results. I also from the first give them all the fresh milk they will drink and a small quantity of green cut bone. After they are ten days old I put them on a mixture of my own and they are kept on this feed until they are old enough to eat whole corn. I give this feed thinking it may be of value to others:

Cracked corn, 20 pounds; wheat, 30 pounds; Kaffir corn, 25 pounds; hemp seed, 2 pounds; granulated bone, 6 pounds; ground beef scraps, 4 pounds; grit, small chicken size, 5 pounds; charcoal, 3 pounds.

The charcoal is ground about the size of a grain of wheat and the finer parts sifted out. As they grow older the quantity of green cut bone is increased, for I aim to build them up with good, big bone and frame. Milk is given them every morning until they are full grown. After the cockerels' combs begin to show plainly I decrease the green cut bone, as it has a tendency to make the combs too large. They are given ample room for exercise. In fact, most of the young birds have the range of the entire farm, and they are not taken up and put in yards until they are entirely grown.

I trust that those who have not had good success in raising their chicks this season will try my plan. If it worked well for me it surely will for you, for like cause always produces like results.

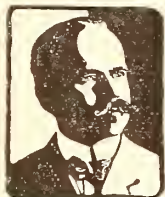

D. T. ROOTS, Breeder of White Plymouth Rocks.
Connersville, Ind.

Newsdealers, Chicago subscriptions 60 cents (when
delivered by carriers), Foreign subscriptions \$1.00.

Look at the date upon your wrapper. Many sub-
scribers write to ask when their subscription expires
and many complain because we discontinue sending
the JOURNAL at the expiration of the time for which
it is paid. The date when your subscription expires is
found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry
paper in America. It has a national and world-wide
circulation. The best writers on poultry matters con-
tribute to its columns. It receives the patronage and
endorsement of the foremost representative breeders
of standard poultry and manufacturers of poultry
appliances in the country.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of
the American Poultry Journal are guaranteed;
that is, if any advertiser using display space in
these columns is proved to be a swindler, the
American Poultry Journal will make good to
the subscriber the amount lost. We do not
guarantee that men in good standing shall agree
in their opinions; we do not guarantee nature
against infertile eggs, but we do agree that in
case a downright swindler succeeds in swindling
a subscriber, we will reimburse that subscriber
and publish the falsity of the guarantee. We
ask, in consideration of this guarantee, that
our subscribers, when writing to an American
Poultry Journal advertiser, say, in every case,
"Saw your ad in the American Poultry Jour-
nal." In no case will this be to your disad-
vantage, while in many cases it may serve you
well. In either event we shall be obliged to
you.

Summer Buying.

July is a month of bargains in the
poultry world. Every breeder is cut-
ting down his stock by cutting prices,
and when this occurs it is a good time
for amateurs to buy. The beginner who
has spent a few dollars for eggs can
profitably get a breeding pen now for
the coming season. The novice can
purchase hens and cocks for showing
purposes later, at a greatly reduced
figure. The breeders demand room for
the young stock and will make prices
that usually move them out hurriedly.
To him who needs old stock or the man
lately interested we say: Buy stock
in July. Yearling and 2-year-old breed-
ing birds are the best to use anywhere,
and they are cheap now. In writing
for them state exactly what is wanted
and ask the breeder for a description of

the birds he has which nearly fill your
demand. You can tell from the tone of
a breeder's letter whether or not he
can supply you and half of his ability
to please you in your purchase depends
on the explicitness of your letters to
him. Remember this. The wise breed-
er knows that a man buys birds to get
something better than he (the buyer)
has.

Champion the Fancy.

The wise fancier is ever on the qui-
vive to defend pure-bred fowls as util-
ity poultry. Every fancier at some
time during the season is called on to
defend the fancy and its product. When
facts are brought to bear on the argu-
ment the breeder usually wins and
hence it is not a bad plan to know a few
statistics to use in defense. One may
easily keep posted on laying contests
going on over the world and those at
home. A fact that lays out the farmer
champion of scrubs is: If his hens lay
from 48 to 75 eggs yearly, how much
feed does he waste by keeping three
scrubs when one well-bred hen would
earn the same gross return?

Brains and Combinations.

There are some specialists in the
fancy who are known as leaders in
other walks of life. One of the most
known Southern breeders of pure-bred
poultry is a breeder of choice registered
dairy cattle (Jerseys); another breeder
of bantams is almost as well known in
the kennel kingdom; a third is one of
the South's greatest breeders of Scotch
Collie dogs; the fourth is a well-known
biologist, and one or two are profes-
sional writers of more than the average
ability. Poultry breeding makes an ex-
cellent combination with any outdoor
pursuit, and if the man or woman who
takes it up be enthusiastic about his
hobby he will soon be at the top in his
specialty. A Chicago educational pro-
fessor is one of the best breeders of his
favorites, and a Michigander who is
well known as a Barred Rock fancier
is also a lecturer of repute. Verily—
there be brains connected with fancy
that can fathom other than the breed-
er's ills. More than one of our noted
fanciers became interested in fowls
first as a pastime or recreation and later
the business grew to be of first import-
ance. If any man has more brains than
he can use in his business, and the
opportunity affords itself, he can profit-
ably employ the surplus in the breeding
of good fowls.

Fuddy-Duddiness.

The fancier who goes home from the
shows with two handfuls of ribbons is
a fuddy-duddy!

"What's a fuddy-duddy?"

A fuddy-duddy is a man who is con-
scientiously "cranky" about the care
his chicks receive from the shell to
show room. You will always find him
working among the chicks and older
fowls when he has a moment of time
from the routine duties. It is his recre-
ation, as it were, and he fusses with the
chicks until the ribbons are won. If
one does not like the word fuss as
used here he can use grandmotherliness.
Some fanciers, the ones that are known
as showmen, breeders and poultry

princes, never take their hand off their
birds until they go under the judge's
eye. They display all the good points
the birds have and cut down the poor
ones; honestly give the birds every ad-
vantage. You can find the fuddy-duddy
with lantern in hand every night among
the chicks. He takes a final look into
everything before going to bed; he be-
lieves in the old-fashioned plan of
greasing a chick's head with a drop of
lard to kill headlice; he oils a choice
hen's shanks to keep them in good con-
dition. One can find him trying new
schemes that lighten labor and help in-
crease results. Hence it is easily seen
that he is a "necessary evil" about
every well-regulated poultry establish-
ment. The more fuddy-duddies we have,
the better is the fancy; and the more of
this quality we can incorporate in our
work—well, anyway, it brings better re-
sults.

Impartial Treatment of Adver- tisers.

The answer to the following communi-
cation will give our readers an idea of
the impartial manner in which we treat
our patrons. We receive a great many
letters from our readers asking us to
recommend some certain breeder, dealer
or manufacturer, but we maintain that it
would be manifestly unfair to our other
advertisers to recommend any particular
one, therefore we always refer them to
the columns of AMERICAN POULTRY JOUR-
NAL and insist that they make their own
selection.

George G. Bates.

Dear Sir:

* * * Have you on file in your office
letters from any of your patrons wanting
first-class breeding stock (one year old)
of our variety? If so we would highly
appreciate the favor if you would turn
them to us, as we can now spare many
very choice breeders, mated to suit, that
we guarantee will give excellent results.
* * * Trusting that you can at an
early date give us some customers for
these good birds that we can have more
room for growing stock, we are with
best wishes. Your friends,

Chicago, Ill., June 12, 1905.

Messrs. _____,

Gentlemen: I am in receipt of your
letter of recent date and thank you for
your co-operation. Your inquiry, asking
if I have letters on file which request
breeding stock and to turn them over to
you if I have any, touches upon a ques-
tion which, perhaps, you have not given
deep thought. The AMERICAN POULTRY
JOURNAL serves two purposes; first to
give information and reading matter up-
on poultry subjects, and acts as a
medium between buyers and sellers of
poultry and its allied interests, and it is
for this purpose that you pay me for
advertising space. Through this medium
you are enabled to reach buyers of your
stock. I have hundreds of advertisers
and many who sell the same kind of
stock as you do, and it would be mani-
festly unfair for me to single out any
particular breeder for special favors such
as you ask. By not using my influence
to personally send customers to you, I
am establishing with you a guarantee
that I am treating all my advertisers
alike and not diverting orders to any

particular breeder with whom you are competing.

When inquiries come to me for stock, eggs or supplies, I invariably send a copy of AMERICAN POULTRY JOURNAL with instructions and recommendation to correspond with the advertisers direct, thus giving all an equal chance. I am glad that you were means you did for it gives me an opportunity to demonstrate to you that I am taking care of your interests impartially as well as the interests of my other advertisers by not playing any favorites. Now that I have called this to your attention, I believe you will agree with me that my position is the only one that an honorable publisher can take.

With best wishes for your success, I am,
Very truly yours,
GEO. G. BATES.

Egg Laying Competitions.

The fourth annual contest of the Sydney Daily Telegraph, of Sydney, N. S. W., Australia, run over with home entries and a second contest or competition was inaugurated. Not one American hen is there in it. There are any number of American-bred entries and we shall watch these with great interest. The Americans who entered fowls in the third contest found a grand market for some of their birds. They have made many shipments as a result of their enterprise.

The following letter from Mr. S. L. Roberts, San Diego, Cal., was made necessary by the large number of our readers who have written Mr. Roberts for more detailed information in regard to line-breeding and other information they desire, and goes to show how much interest is taken by our readers in the reading matter published in these columns. We are frequently in receipt of letters asking for the address of some one of our contributors, which we have inadvertently left off. We make it a rule to always give the name and address of the writer, unless otherwise requested, and would ask our readers when writing to any of our correspondents for information to please inclose stamp for reply, as otherwise it entails quite an expense for postage on the party who has to reply to several dozen inquiries of this character.

SAN DIEGO, CAL., June 6, 1905.
Geo. G. Bates, 323-325 Dearborn St.,
Chicago, Ill.

Dear Sir: I simply wish to say to readers of the good old AMERICAN POULTRY JOURNAL (and they would seem to be everywhere) that it is quite inconvenient and well nigh impossible for me to answer all the correspondence I am receiving drawn out by the paper on line breeding, which appeared in a recent edition. I am a busy man, and however much I should be pleased to answer all requests for counsel and advice in mating, establishing strains, etc., my time, which is my patients', is too fully occupied to do so. Very much regretting this, I am very truly the friends of all true poultry fanciers.

S. L. ROBERTS.

AMERICA'S "BIG FOUR"

Barred, White and Buff Rocks and White Wyandottes that are pedigreed. Trap nests used exclusively. No loafers here. Write for my new finely illustrated 56-page catalogue, the best you have ever seen, sent free if you mention A. P. J.

H. P. RANKIN

Box 61, Hartington, Neb.

Monthly Prize Article Contest.

Beginning with the August number we will again inaugurate our Monthly Prize Article Department, which proved so popular two years ago. A first and second prize will be offered and paid for the best and second best articles received not later than the 15th of each month. The winning articles and perhaps other meritorious ones, will be published in the following issue. The prizes will be three dollars for the first article and two dollars for the second. The amounts are not large, but they are sufficient to pay most people reasonably well for the few moments required to prepare a short article. They are worth the effort necessary to compete for them, and the writers will have the satisfaction and credit which always accompany an award of this kind. Articles of too great length should not be sent in. We prefer short ones of about a column in length, or about 600 words. The contest is free and open to all readers of AMERICAN POULTRY JOURNAL. You can write upon any subject of your own selection, but it must of course pertain to poultry in some of its branches. Timely and seasonable articles are preferable, for instance, in August we would prefer articles on how to best prepare birds for the coming fall shows, the care of breeding stock through the molting period, the cleaning of yards and houses and other items of that nature. Articles describing appliances and houses and accompanied by rough sketches or photos are especially desirable. All communications must be written on one side of the paper only and must be accompanied by a letter stating that they have been sent in for competition in the Monthly Prize Article Department, otherwise they will not be entered. No manuscript will be returned whether it wins a prize or not. The merits of the article will be decided by the editor. We trust that all our readers will take part in this monthly contest. We want to give all of you the benefit of each other's experience along various lines and we have made the conditions easy. You can send in as many articles as you like, and can contribute each month if you so desire. Remember the winning articles for the August number must be received by us not later than the 15th of this month.

This offer is entirely distinct from our \$50.00 prize offer.

* * *

This is the season of the year when the poultry publisher makes his plans for the coming winter, and just now we are planning many new features for the AMERICAN POULTRY JOURNAL, as it is always our aim to keep in the front rank and give to our readers the best of everything pertaining to poultry, and we can assure our readers and patrons that the old AMERICAN will be better than ever during the coming year. During the season just closed the AMERICAN POULTRY JOURNAL was favored with its full share of success and patronage. We retained nearly all our old patrons and added many new ones. Our subscription list

O-K POULTRY FOOD

Moulting fowls give a languid appearance to the poultry yard. The hens stop laying and mope listlessly about. Even the cocks are indifferent and taken altogether they're a ragged, lazy looking set. The poultryman's profits drop to the minimum while he waits for his fowls to get busy.

Moulting is necessary to the fowl's welfare—it's a time when Nature restores the birds to their full vigor and strength.

You can hasten the process and shorten the period of non-productiveness by supplying Nature with the elements needed to reinvigorate your fowls, by feeding

O-K Poultry Food

They need bracing up. They need help. Give them food that will create fresh vitality, renewed vigor and strength, that will give energy, and you will set Biddy to manufacturing fresh eggs in a much shorter time and at a rapid rate. They should have a conditioner that will tone up the system, make new, rich blood, and put fresh activity into the whole system. They need a food like

O-K-POULTRY FOOD

something that will put them on a profit producing basis. O-K Poultry Food is a pure guaranteed conditioner—furnishes the needed elements for putting the egg-making organs in perfect condition. Aids digestion, restores health, vigor, vitality; keeps fowls lively and strong. A disease preventive that also cures Gapes, Pip, Roup, Cholera and Leg Weakness.

It will pay you to give O-K Poultry Food a test during moulting time and see how fast the pale combs grow red; see the fluff fill out and the trim sprightliness—sure signs that there will be plenty of eggs in the nests before long. Sold by dealers. If they can not supply you, order from us direct. Send for free circular.

O-K-Stock Food Co.

408 Dearborn St., Chicago

was materially increased over that of any previous year.

A poultry paper, or in fact any paper, is just what its readers make it. It is to the readers that the editor must look for suggestions and criticisms; therefore we ask our readers to help us make the AMERICAN POULTRY JOURNAL better than ever by sending us items of news, photos of poultry scenes, plans of poultry houses or anything that might be of interest to their brother and sister fanciers. Secretaries of poultry associations and specialty clubs are invited to send in items about their organization. We have to depend upon the secretaries doing this, as it is utterly impossible for any editor to obtain the desired information and give due publicity to this branch of the poultry industry without the assistance of the secretaries of the different organizations. By doing this they will assist us and help their organization.

The city of Indianapolis will hold two important meetings this month. The Association of Poultry Journal Publishers and the American Incubator Manufacturers will meet there in their various interests. If the incubator people can influence the insurance companies to test the machines as regards their safety it will greatly lessen the premiums on insurance and also allow it to be carried where insurance is now refused. The manufacturers have given poultrymen so many helps that only this one thing is necessary to their perfect treatment of the poultry public.

The man with the artificial egg is on the nest again! Parisian scientists tell us that a genius has perfected an egg really hand-made and which will pass the eye of the critique as the real thing. The white is made of sulphur carbon and beef fat, and the yolk of a mixture of beef blood and magnesia and colored with chrome yellow. The shell is made by a blow-pipe from a moist combination of lime and other products. What about the digestibility of this travesty on hen fruit? Scientists say

nothing of this, quite naturally! Give us the real fruit of the hen as Dame Nature turns it out.

The judges who will officiate at the October poultry show held at the Lewis and Clark Exposition are: George D. Holden, Theo. Hewes, E. J. Ladd, C. G. Hinds, Ross C. Hallock, Thomas Wilken-son, H. H. Collier, W. W. Browning. We have but one suggestion to make: The name of Henry Berrar or that of the Grand Old Man of Pasadena be added to the list. This in honor of the California fanciers who will show there and because of their efficiency as judges. We are probably upheld by the majority of breeders on the coast.

The editor of the Rural New Yorker has found another method of telling of the hen's usefulness: A bushel of wheat worth 90 cents will feed a hen for 300 days. If she lays a hundred eggs worth 2 cents each she makes the wheat worth \$2. This amount will haul a ton of freight 250 miles or one passenger eighty miles. She gives the land 25 cents' worth of fertilizer for the next crop and then makes a toothsome dinner.

The longer you make the breeding of poultry an intelligent study the more you will realize how little you knew at a time in your early experience when you thought you knew about all there was to learn. The fellow who ridicules "fooling away time with chickens" is related to the man who sits around the stove at the grocery and tells his listeners how to run the country and settle the great economic questions of the day. The "fool killer" still has plenty of work to do.

It will be remembered that Robert A. Colt conducted a British department in the *Poultry Monthly* at a time when that worthy journal was in its heyday. He gave readers some good matters up to the time AMERICAN POULTRY JOURNAL absorbed the *Monthly*. It is interesting to know that he has built up one of the biggest, if not the largest, poultry supply businesses in the United Kingdom. And the bulk of his reputation has been made with an American-made incubator!

Someone has remarked that "a hobbyless man is only half a man." If this be true we should try to cultivate our hobbies. Hobbies ridden to death are sometimes the downfall of amateurs. Are you afoot, or on a hobby? Can you drive him single or double? Will he stand without hitching, or do you need a tie-strap and weight?

In an exchange from a foreign country we note a short article on the last annual meeting of a specialty club. Ten men were nominated for secretary and no one would have the office! What a contrast!

We call a chicken gatherer a huckster; in England he is a higgler. Maybe this is why our best birds and theirs don't match.

Now that they have produced the seedless, coreless, blossomless apple it is up to the chickenman to produce a squawless, crowless, featherless rooster.

P. S.—We succeeded in producing such a bird without encountering serious obstacles. He tasted fine and made good dumplings.—*Pacific Poultryman*.

Fifty Dollars in Cash Prizes

We want you to tell our readers what you know about one or more of the following subjects. We will pay:

Twenty-five dollars for the best article.

Fifteen dollars for the second best article.

Ten dollars for the third best article.

The contest closes October 1, 1905.

This is the second of a series of offers which AMERICAN POULTRY JOURNAL will make for the purpose of obtaining for our readers the best and most complete information upon the various subjects, which are of vital importance to poultrymen. We hear it frequently stated that the poultry press falls far short of what it should be as regards the teaching of the principles of success in the business except in the most simple and rudimentary forms. There is need for instruction along lines that will be beneficial to the thousands of breeders who have passed the elementary period of breeding and who feel the need of greater knowledge, which has been gained by practical experience. There are hundreds of persons who have given much study to certain questions and have intelligently planned and carried out experiments, which have proven or disproven many of the theories, which are too generally accepted as truth. These are the people who are in position to be of real service to the fraternity by making known the results of their research. We intend that the readers of AMERICAN POULTRY JOURNAL shall have the very best and most helpful instruction that money can buy, and this contest offer is one plan we have adopted to accomplish the result. We would like every one who reads this to try for one of these prizes. The list of subjects has been selected with a view to covering a wide range, so that every breeder will find some subject with which he is familiar enough to write upon, with a fair chance of winning. The contest closes October 1. All copy must be in our hands not later than this date. The articles must be original and not have been published before. They must contain not less than 1,800 nor more than 2,500 words. The writer who covers his subject most thoroughly and presents it in the most comprehensive manner will be given first prize. We reserve the right to retain all articles sent in and to publish them, if we so desire, giving full credit to the writers. This offer is entirely distinct from our Monthly Prize Offer. Following are the subjects upon which we solicit contributions:

The process of molting. Care of the fowls during this period. What to feed and why to feed it. Is delicate color and gloss of plumage affected differently by different foods? If so, how and why? A general treatise on the subject of molting.

The best and most thorough explanation of line breeding, with a detailed plan for establishing a strain, a clear and concise statement of the principles involved in developing the desired characteristics of the fowl and embodying the results of too close inbreeding.

Preparing birds for the show room. Instruction which will enable the amateur to take advantage of the many little details which add to show condition. How to feed and care for the

birds during their close confinement in show ecops. Instruction to the beginner whose ambition is to get prominently before the public as a fancier and breeder and establish a paying business.

The best method of starting a market poultry plant. The amount of money necessary to purchase stock and the profit to be expected from the outlay suggested. The amount of ground, number and size of buildings required and suggestion in regard to economical and successful management.

How to advertise successfully. Points to be considered in selecting a medium. Conditions affecting an ad and hints on the advantage of continuous advertising.

Has the specialty breeder greater chances of success than the breeder of several varieties, as regards prominence and high prices for stock and eggs? If so, why?

Advice on management of incubators and the advantage of their use, even though hens are available for the purpose.

Success with brooders. How to feed and care for the chicks.

Rules to be observed in getting the highest percentage of fertile eggs. Hints on house room, feed, care, selection and mating, as affecting fertility of eggs.

THE NEXT ANNUAL MEETING OF THE AMERICAN POULTRY ASSOCIATION.

The vote on place of meeting closed June 19, 1905, with the result as here-with:

For Cincinnati	56
For New York	45
For Denver	3
Not voting	7

Membership Executive Committee. 111
Vacancies by recent death—John L. Cost, A. E. Olshausen. 2

Therefore, in accordance with the above vote, we announce that the next annual meeting of the American Poultry Association will convene at Cincinnati, Ohio, at 3 p. m. on Thursday, January 18, 1906, the place to be announced later.

An adjourned meeting will be held at Hagerstown, Maryland, on Thursday, October 12, 1905, the hour and place to be announced later.

By order of T. E. ORR, Sec'y-Treas.
D. L. ORR, President. Beaver, Pa.
June 20, 1905.

PROGRESS OF THE NEW STANDARD.

To the many who have ordered copies of the New Illustrated Standard, and to the many more who have made inquiries as to when the book will be ready for delivery, I take this opportunity to report progress as follows:

A meeting of the Publication Committee was held at Pittsburgh on April 4th. From the advancement of the work at that time it was the unanimous opinion of the members of the committee that the book should be ready for delivery by August 1st. Since that date the work has progressed with fair rapidity. All pages prior to No. 200, except the Table of Contents, are in type. Pages 200-242

are in the hands of the printers. Pages 243 to 310 (Turkeys, Geese and Ducks, also Constitution and By-Laws) will be in the hands of each member of the Publication Committee for final approval before July 1st.

Therefore, unless some unforeseen delay occurs, we shall be ready to deliver the book early in August. We hope that those who are making many inquiries will consider this circular an answer to their letters.

T. E. ORR, Secretary.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Glancing over April JOURNAL I notice card from E. Dana Sutliff, stating his hens eat about three bushels grain per year each, and asking how a man can realize a profit on such a feed cost.

Of course, any experienced poultryman would regard such a statement foolish. Either a man must waste badly or he must keep his flock so fat that he is lucky to get even fifty eggs per year per hen instead of 200, which he mentions.

I give the following statement for what it is worth to him or anyone else, and it is absolutely correct:

To a pen of twelve hens and one cock I give them every morning hardly a quart of mash, consisting of wheat bran, plain oats and middlings, and at noon hardly a quart of mixed grain, consisting of whole wheat, oats and corn chops. At night the same as the latter feed.

By actual count of cost they cost me on an average of 5 cents per month, or 65 cents per month for the thirteen chickens.

They do not get anything else, and are penned in a lot about 80 by 156 feet, which, however, is covered with plenty of green stuff such as alfalfa and Essex rape.

From this pen of twelve hens I get every day from eight to ten eggs, never less than eight eggs per day, usually more, sometimes an egg from every hen.

This rate of production is steady right along through this hot weather, and is not a temporary spurt, for there is no occasion for it.

While I do not sell any eggs at all at market prices, even counting the price as he mentions, at 20 cents per dozen, not less than 240 eggs per month, which is twenty dozen, would give me \$4 per month on the twelve hens, or \$48 per year for the same hens, less the feed cost, which would be \$7.80 per year, deducting from total production would leave \$40.20 net, or \$3.35 per hen per year net.

Now, this is accomplished without any extra feeding or petting, or everlastingly nursing and doting them with so-called egg feed, etc., which is, in the writer's opinion, the great cause of so much disease and trouble with the poultry fraternity these days. Mine get no extras or special attention in any way. He claims his are the American breeds, which is unfortunate, if he is out for eggs as a leader.

Mine are the pure breed, high-class Black Minorcas, which, of course, is different.

Dallas, Texas.

Don't neglect your old fowls in your enthusiasm over the young stock. They should have the same care and attention as usual.

Examine the young chicks closely for lice. A chick that is covered with lice cannot thrive.

ORR'S WYANDOTTES ORPINGTONS

All the Standard Varieties of Both Breeds.

Birds, old or young, \$2 each, \$5 per trio.

Orr's Lice Killer is Best, \$1 per gal.

Climax, light, easy to fasten, secure as a padlock. Sizes to fit any bird. Prices—12, 20c; 25, 35c; 60, 60c; 100, \$1. Send stamp for sample bands and booklet.

The Keyes-Davis Co., Ltd., Department B, Battle Creek, Mich.

FEEDING OF CHICKS.

To Insure Strong, Healthy, Vigorous Birds.

Now dear readers in beginning our short writing on this so important question (feeding of chicks) we will give you some valued experience from our past fifteen years, during which time we have learned much on the importance of feeding young chicks from the shell, and we do not claim our method the only correct one, but must say we know if you will follow our system you will have strong, healthy, vigorous chicks, maturing into good birds with few culls, if from properly mated, line bred parents.

First, in mating up your breeding yards you must know each bird's breeding, and use only the best in quality, not overbreeding strong, vigorous, well up in size and weight hustlers, and if your choice be Leghorns, mate to each male from ten to fifteen females, according to vigor of the male, and with the proper feed and method of feeding you will have well fertilized eggs. Then make a careful selection of eggs to be set, not using too small or too large, ill-shaped eggs.

When eggs begin hatching do not bother them for from thirty-six to forty-eight hours, during this time your hands will be better off off them than if among them, unless you take from the nest or incubator, very quickly, some empty shells that the chicks may have more room to make their way; also do not pick at or assist any chick to get out of its shell, for such chicks will seldom live and if so will be of little good.

If the chicks are being hatched by incubator, on the twentieth day have your brooder nicely cleaned up and slowly warmed up to 95 degrees under hover with ventilators well opened. For bedding in brooder use fine cut straw, and scatter well around the hover a good supply of sharp chick grit, for chick's first meal that they may get their grinding machines in place, and after chicks are placed in the brooder allow them a few hours to rest, and right here let us say that we always place chicks in brooders early in the morning and about noon comes their first meal, just what they will quickly clean up of some high grade prepared chick food, as there are many feeds prepared that will start your chicks on better than any feed you can prepare. Feed only what the little fellows will quickly clean up, and often rather not quite enough than too much, except at night. After the first two days we feed at night all the little fellows want, and with fresh clean water before them, slightly warmed during cool weather, your little chicks will surround the hover or hen for the night happy with their little crops filled. Again we urge you to not overlook keeping before the chicks at all times plenty of sharp chick grit; also granulated charcoal. The latter greatly aids digestion. You will find the little chicks greatly relish a little finely cut onions, fresh bits of beef, etc., occasionally, not giving too much or too often, every other day is sufficient, giving more as the chicks grow older. Until they are well out of danger we give them every other day a shallow pan of sweet skimmed milk, this they greatly enjoy. Do not overlook some nice green grass to run among and pick at after the dew is well off.

After chicks reach about eight to ten weeks of age and having been fed as above, with good clean dry sleeping quarters, well rid of mites and lice, you are

ready to begin the feeding of coarse grain—wheat, rye, cracked corn, oats, buckwheat, sunflower seed, etc.—still not feeding too much, but at least three times daily, with a regular hour for feeding; sowing grain well over chick's run, allowing them all the free range possible.

By this time your chicks will be taking the roost when you will have to get up and out early in the mornings to catch them near their night quarters, and when you can soon feed whole grain and give larger grit.

At the end of the season, after having followed our method of feeding we are sure you will have very hardy, vigorous birds, losing very few during chickhood or after.

Peterson, Tenn.

WILBERT BROS.

METHODS PURSUED IN CARE AND FEED OF THE LITTLE CHICKS FOR THE FIRST SIX WEEKS.

Editor AMERICAN POULTRY JOURNAL:

This subject has been discussed through the AMERICAN POULTRY JOURNAL columns so often and by so many different authorities, and almost each one differs from the other to a certain extent, that no ironclad rule can be followed, as locality, climate and situations are different. The growth of chicks depends, to an extent, on the caretaker. Chicks removed from the incubator, should go into a good brooder which has been heated up to 98 or 100 degrees, keeping brooder up to 95 for several days, then gradually lowering the heat each day a trifle. The nature of the chicks will make you a guide thermometer to go by. Never allow the brooder to chill the chicks, as it is always sure to result in the loss of chicks from bowel trouble. I have a wire run-way, of inch mesh, so connected with front of brooder that the chicks can run in after they are a week or ten days old and when three or four weeks old (as to weather and temperature conditions) the brooder is removed and a closed brood coop substituted. After the chicks get accustomed to their new house, they are given free range on a hundred-acre farm. When they reach the age of eight or twelve weeks a colony house is put in place of brood coop, in which they are allowed to roost till late in October, when they are put into other quarters for the winter.

Always be on the alert for lice and other enemies detrimental to the chick's life. I keep a double barreled shotgun always loaded and in handy reach for all marauders and was compelled to give several of my neighbors eats a load of shot, dispatching their days of chick feasting in short order. In caring for chicks with hens, the old-fashioned "A" coop without a bottom is as good as any and preferred, for it can easily be changed daily onto a clean spot of ground, doing away with the time and trouble that board bottom coops require to clean them. Chicks if cared for properly when raised in a brooder, are the equal of chicks reared by the hen, as this has been demonstrated time and again on the farm and in the show-room. As to feeding, we always feed the chicks for the first ten

Best for sore horses
Pratts Vet. Healing Ointment.
Made by Pratt Food Co., Phila. Over 30 years old.

days on moistened bread and finely ground corn-meal, giving them only just what they will eat up in a few minutes, five times a day, with an occasional change of coarse ground corn-meal scattered in fine litter, letting them scratch for it to give them exercise. We have tried the prepared chick starters on several lots of brooder chicks, for several years past and every time these feeds gave them bowel trouble if only fed in half rations during the first ten days of the chick's life, so consequently we fell back to the old woman's way of feeding them on bread and corn-meal during the first ten days of their life. We use milk to moisten feed with. After chicks are ten days old we gradually accustom them to feeding them on some good poultry food, which then constitutes their diet up to maturity. They thrive and grow very fast, having had S. C. Brown Leghorn pullets laying at four and one-half months of age and S. C. Buff Orpington pullets laying at five and one-half months of age, with the largest variety of fowls the Light Brahma to begin laying at eight months of age. We feed no prepared bone or meat foods, as all of our chicks have free range of the farm and gather enough insects to balance their grain feed during their life of chickdom up to maturity.

Feed is not all, as the cost of raising a chick to maturity must be taken into consideration by all of us fanciers and breeders where competition is so large as it is at the present day, so as to enable us to compete, when stock is ready for the intending purchaser by fall. We always make it our aim to raise the highest and best type of standard bred chicks in our varieties, at the least cost for feed and by our closest and most careful feeding, we find that a chick raised to maturity costs us from fifty cents to one dollar to feed alone, not counting our trouble and time, besides the extra expense connected in brood coops and colony houses. If this and all other such articles written are all summed up and reviewed by the readers of AMERICAN POULTRY JOURNAL much information can be put to practical use in the everyday poultry yard.

Mars, Pa.

H. A. EMMEL.

Many a brood of promising chicks are drowned by being caught in a drenching rain with no protection to which they can go. The loss from this cause each season is very great and many of us do not profit by experience and provide proper shelter for the youngsters. It is true that at times they show an astonishing lack of the instinct of self-preservation by refusing to seek shelter when it is provided close at hand, but this fact should serve to impress upon us the importance of greater vigilance in preventing loss of this kind.

Whitewash is better than paint for the interior of the poultry house. Be liberal with it and put in a little pulverized glue thoroughly dissolved in warm water.

Don't despise the late hatched chick. Many January prize winners are hatched in June.

POULTRY IN THE CITY.

For those burdened with household duties, with little time or strength for vigorous out-door exercise, nothing is easier or more profitable for the spare moments than a few chickens to care for. If more of our city housekeepers knew the value of chickens in the yard the year round, they would not be altogether dependent on the grocer. When time is short for spare work, a few in number can be best cared for, and on a small range, better managed. Over crowding breeds bad habits, also a quarrelsome, fighting disposition, driving the weaker ones out to wander. A few may not swell our purse any, but if the table is well supplied, they are paying for their feed and care. That they can be raised successfully on a small range has been proven, but they take the same care and certainly more to eat than if they had the range of a farm. The appetite is not governed by the size of a flock, yet most people have the idea that a few in number require little or nothing to eat, and no care, and this same idea being carried out, is the reason of so many empty egg baskets and no meat for the unexpected guest. With good judgment the feed will not cost much and still be the needed variety. They need not wander for their green food either. A pan full of meats, vegetables and other table scraps cut fine, makes a good meal—dry bread fed in pieces the size of a grain of corn is liked. Hard bread soaked in milk or water and squeezed dry is a good substitute for corn meal dough and more nourishing. They relish nothing more than freshly cut corn cobs to pick on. For egg food, crack the useless soup bones and others on a rock for them to pick over. Green food can be supplied in any season. Turnip tops during the winter month and a cabbage head cost but a trifle, and one fastened with a peg to a post will last for a several days. In summer we have the vegetable leaves. When your bean and pea vines are through bearing pull one or two bunches in the morning and when fresh, tie them by the roots to a post and the chickens will soon rid the stalks of leaves. Lettuce and beet tops are always eaten. No exercise, no eggs. In clear weather rest them from the scratching shed by scattering the grain in the leaves about the yard. Keeping them busy not only means your success, but peace of mind about the neighbor's garden. The general prejudice against raising chickens in cities will remain as long as idle, hungry chickens are kept. Clear, fresh water is just as necessary in winter as summer. Layers especially require an abundance of it. Before the little chicks are too large to do damage by scratching, if they have the run of the garden a few hours, several times a week, will rid your vegetables of insects, thus helping your crop, and saving a powder bill. By using the simplest precautions the mites will not trouble us at all. Perfect cleanliness the year round is the best remedy. As they are hard to get rid of in summer, don't let them get started. Do your cleaning up now. The first pleasant spring day whitewash or scald the hen house, nest boxes and the chicken yard in general. Put in clean straw, dust all the chickens, the setting hens especially, and keep them all well dusted in

summer. Doing a little cleaning up every day is much easier work and shorter time than spending half a day once or twice a week and letting the mites collect between. In the city of common conveniences we have no hindrance but laziness. No minks or hawks to contend with. A healthy stock, experience and perseverance is the road to success; not the number and range. From four years' experience we think the Barred Plymouth Rocks are excellent for a city range, not of a wandering disposition, generally free from diseases, of rapid growth and good layers.

SARAH S. HARRIS.

A STRONG INDORSEMENT OF THE BUFF LEGHORN.

I was always a greater believer in pluck than in luck, but I certainly was favored by the latter when I decided to raise Buff Leghorns. To say that I have been highly gratified is putting it mildly. They are hummers and no mistake. I used to raise Light Brahmas and Barred Rocks, but being of a turn of mine that liked to see things move, I grew dissatisfied with them, for it was set, set, until I was disgusted beyond measure, so I decided to try the Mediterranean class. My neighbors said I could never keep them confined, for I had only a town lot, but lo, I have found the keynote to success in poultry raising if beauty, utility and table quality count for aught, non-setters, layers of large white eggs, and O, what a number of them, laying the year around if given half a show, and I tell you they are just what we all want if you only knew it. I never have been bothered with them getting out or wanting to. I believe truly they would work, lay and be contented the year around shut up in a store box; in fact, there cannot too much be said in praise of these golden beauties, every one as good as their color indicates.

CLARENCE C. WOODCOX.

Don't forget the green food for those brooder chicks. It's absolutely essential. So is grit; so is charcoal in their daily food. Don't feed too much of the latter. Put one tablespoonful in the food of one hundred chicks.

Dust the breeders often and see that they have shady dust wallows to scratch in. This preserves the plumage.

LEE'S

LICE KILLER

strongest and best. No handling, dusting, dipping or greasing. No trouble with vermin if you use Lee's—the name insures quality. Price, qt. 35c; ½ gal. 60c; gal. \$1. Sold by dealers in every state.

GERMOZONE

cures Chicken Cholera, Bowel Complaint, Sore Head, Roup—the best chicken medicine. Profits are in healthy chicks. Save the chicks—increase your profits. Germozone will do it. Price 50 cents, postpaid. Send for new poultry book containing calendar and egg record and lots of valuable information.

GEO. H. LEE COMPANY
Box 91 Omaha, Neb.

THE HENS DON'T LAY AND THE CHICKS DIE.

In this poultry business if there were no bitter to mix with the sweet, the sweet would eventually sour. We must, to succeed, gather lessons from failure as well as from success.

Every year thousands are trying new breeds to better their luck, but in this rush to get something better a great many overlook the cause of failure with the kind they already have. Let us go down deep and collect the things leading to bad luck. Let us make some comparisons, let us compare poultry with people.

Every year the railroads and passenger ships are taxed to carry people looking for health. Trains loaded with people, meet trains loaded with people, and most of them are looking for health, or rest, which is about the same thing, looking for new conditions and surroundings.

I remember once of living some sixty miles from a noted mineral spring. It was the fashion for ailing people to go in covered wagons and camp out, a month would make new people out of them. An old doctor told me that most of the cure was in the camping out and I believe it, don't you?

Now, how about hens? I venture to say that no one ever moved a flock to a new farm or new quarters who did not notice an improvement, more eggs, more hen-songs. I have seen it claimed that fowls raised from eggs shipped from a distance did better than fowls from eggs gotten from home. It is going deep into a theory, but I verily believe there is some truth in it, don't you?

For fear I make this article too long, let us go at it short cut.

Fowls are natural born hunters. A duck does not take to water any more naturally than hens take to hunting and scratching. Even in the barest yards and the most poisoned dirt surface they cannot resist scratching and hunting. I have seen them scratch a bare board floor and stone steps, and so have you.

One time a party in Wisconsin was going to move to a new farm in South Dakota. In a letter she expressed regret with the idea of parting with her flocks of White Wyandottes and White Leghorns. I wrote the lady to take the hens along, that they would more than make up for the freight when they got to work in a bug-paradise, a new farm. Later on the lady wrote me that her flocks were more than coming up to our expectations.

Hens confined to the same range and monotonous surroundings month after month, and year after year, get tired. Some camping out would cure them. As a substitute for camping out, plowing up the ground, moving the hen coops, etc., is all right. We all know this theory is correct. Why do we not practice it more?

These same principles apply to small chicks. They are natural hunters, they want to find things, the greater the variety the better. Right here in this chicken town I see, every day, object lessons, which are definite. As I write this article there is a bunch of 140 chicks being raised in a show window, a space 3 by 8 feet. This space is covered with a mixture of chaff, sand, alfalfa meal and chick food. The chicks are a month old, no sign of leg weak-

ness, no dead chicks.

Then, I know of a pen (bare pen), 15 by 50 feet that must have a credit of 2,000 dead chicks in three years. The yard is low, sour and poisoned. It would give a person the yellow fever, black plague and jim-jams to stay in that yard for a few hours.

Will write you again sometime in the future, but in the meantime think it over for yourself.

M. M. JOHNSON.

ANNOUNCEMENT.

I hereby announce myself as an expert judge of poultry, and respectfully ask your patronage when you are in need of a judge.

I am a specialist breeder of Rhode Island Reds and Orpingtons and know more about these two varieties than any other, but have been in the poultry business for nearly fourteen years and have bred Plymouth Rocks, Wyandottes, Leghorns, etc., successfully.

I only ask that you consider my name when your show is to be judged by comparison only, as I do not believe the score card system always gives the best bird the blue ribbon.

Thanking you in advance for your consideration, I am yours respectfully,
C. N. HANSEN.

Warsaw, Ky.

Make it a duty to wash the drinking vessels every Monday morning. Put a strong antiseptic in the water. At this time of year one must fight all chances of disease. Put a roup cure preventive in the drinking water. Change the water at least twice a day.

Cyphers Poultry Supplies and Foods.

Our 1905 Catalogue consists of 228 pages. It contains six special chapters on profitable poultry keeping; more than 450 illustrations including latest portraits of 150 best known authors, judges, fanciers, editors, professors of poultry husbandry and owners and managers of the world's largest, successful poultry plants. Will be sent free, postpaid, to every reader who sends his name and the names and addresses of two acquaintances who keep poultry.

In addition to our splendid line of INCUBATORS AND BROODERS remember we are manufacturers of

Everything Required In Poultry Keeping.

CYPHERS CHICK FOOD

by its great variety of constituents and well balanced condition puts on flesh and muscle quicker than any other food on the market, while preserving health. The whole, sound grain is used and none of its valuable constituents have been removed. It is all there because we manufacture in our own mill nothing but poultry foods—no breakfast foods nor stock foods to consume the better part of the grain and leave the refuse for the tender little chicks that have not the strength to digest such coarse, fibrous products.

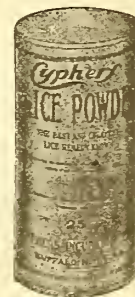

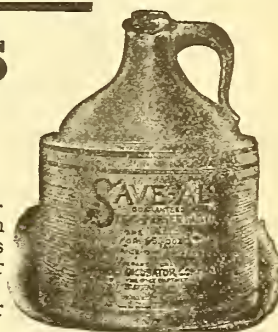

We grind, mix, sack and seal all our Foods. For the protection of our customers our ready-mixed Poultry Foods are put up in sealed bags, bearing our Trade Mark, each bag being sealed with a lead seal with the word "Cyphers" stamped on one side and the word "Buffalo" on the other. Customers should refuse all bags which do not bear our seal, also those on which the seal has been broken or removed.

Cherry Hill Poultry Farm H. W. BLANKS, Prop., Columbia, La.

STARTING A POULTRY FARM.

Where is there a person who would not like to own a poultry farm, with its pretty fowls on the green grass, shaded with its heavily loaded fruit trees? The sweet pure air and healthful exercise puts new life into anyone. Yes, and the dollars are there, too, which makes it more interesting. When the buds burst open and the flowers come forth and the little birds say springtime is here, the poultryman pulls off his coat, rolls up his sleeves and does two days' work in one.

Now, in starting a poultry farm the first thing is to locate a site, but poultry is being raised everywhere nowadays, so don't let that stop you. A southern or eastern slope is preferred, with soil heavy enough to grow grass and trees.

Running water is handy and if you can locate near a large town it will give you a local market. Get all the land you can without losing sight of your other expenses, as your young stock needs range and all the feed you can raise is so much the better. Of course, you have already made up your mind whether it shall be a fancier's farm or a market farm, or both. Have an idea, if possible, what your plant should be when completed, then lay it out so you can add on each year. Make it comfortable for your fowls as well as convenient for you to keep clean, etc. Build roomy, warm, dry houses; supply fresh air without draughts. Select the breed that suits your requirements best, and give them the best attention possible and you will be well repaid. We find that the Mediterraneans give us more and earlier eggs and the larger varieties more and better meat. Get good thoroughbred stock and if for fancy, get the best. Watch them closely; feed a variety; use good wholesome grain, meat and green stuff; supply grit, water and a dust bath. Fight the lice all the time. Supply shade if you haven't any and plant fruit trees as soon as possible; they increase your profits. With us cherries come first, then plums, etc.; grapes come last; the young stock is hard on them and they are not good food, either.

The young stock can be hatched with hens or incubators. We have a separate room for the setting hens. We darken the windows, put in water, grit and corn and set them in common, round cheese boxes. These boxes are placed on the floor, one for each hen. They eat and step back in the nest easy and have little trouble with them. Dust often with lice powder. We like the incubator, also; they are always ready and breeding stock must be hatched early. A dry cellar or unmsed room in the dwelling house is a good place to run an incubator. Have plenty of incubators so you can set your eggs while they are fresh. Old eggs hatch poor and weak chicks, cripples, etc.

Separate the young from the old and the pullets from the cockerels. Lay off a piece of land and scatter small colony houses or boxes over it. Move your young chicks out on the grass and teach them to go in at night. This is better than moving them around. As fast as they outgrow their quarters divide them into small flocks. They can stay here till fall and be of little trouble.

Feed them after they are forty-eight hours old a little and often. They can be fed oatmeal, millet, corn-bread, etc. If these are your first try the prepared chick feed; it is ready to serve. Keep them warm and dry and watch your hens and brooders. It is the little things that count.

Of course you want to succeed, so you must work, study and read. Take the **AMERICAN POULTRY JOURNAL** and don't miss a copy; it is a fine educator. If you have some good birds to sell, advertise them. Attend the poultry shows; ask questions of men who know, and your poultry farm will be a winner.

ALFRED P. BAKER.

Washington, Ill.

City and country horse owners use Pratts Harness Soap.

Made by Pratt Food Co., Phila. Over 30 years old.

Unhealthy fowls are costly. Impure water breeds disease.

Lathrop Fountains

Keep Water Pure

Moderate cost. Profitable results. Circular free.

Lathrop Mfg. Co., 50 Central Ave., Rochester, N. Y.

THE AMATEUR AND THE POULTRY JOURNALS.

Most of us have heard of the man who liked the Episcopal church "because it gave the members a chance to talk back at the preacher." Perhaps that is one reason why the poultry journals are so highly appreciated by people who keep a few "chickens," either for pleasure or for profit.

A modest man or woman hesitates to write for the average daily paper; even when there are wrongs that should be mentioned, the probabilities that such communications will not be appreciated has a restraining power. But the editors of our poultry papers not only tolerate but even invite our crude productions. And while many of these may provoke the mirth of the professional poultry-man, who is so far past the perplexities and mistakes that constantly beset the path of the beginner that he has forgotten all of them, there is often a word in season to those just entering that path.

If we read only of those who are making large amounts in the raising of poultry, we should look at our own account-books with consternation.

The fact that poultry-keeping is a business, to be learned from the very foundation, is being impressed upon us by all the papers connected with it. Our mothers and grandmothers succeeded in raising a good many fowls every year and we might imagine that no instruction is needed for us to succeed in the same line. Nothing more than good common sense and good luck. These are certainly qualities not to be despised in any age. But sometimes, when in a communicative mood they have told us of their bad luck. How the cholera went through their flocks and perhaps took all of them. Of the gapes and vermin that caused them endless trouble so that we cannot but rejoice that we can avoid most of these troubles if we make good use of the advice that is so carefully given in the best publi-

cations. Of course we are compelled to adapt this to our circumstances. We on the Pacific coast cannot obtain many of the advertised and highly recommended articles without paying such freight and express charges that almost discourage one. But by a little ingenuity, we can find something that will do as a substitute.

The improvement in care of fowls and the greater humanity shown to them may in great measure be credited to the poultry papers. "Evil is wrought, by want of thought, as well as want of heart," is just as true now as it ever was. But the constant reiteration of advice to properly water, feed, house and ship, our fowls, is making an impression on the general public. Cruelties that were once common, are now a matter of law in many states, and a man cannot starve and beat his horses and dogs, or brutally treat any dumb animal, without suffering for it, if it be known.

I can remember hearing a farmer say that it was foolishness to water chickens every day. This was more than twenty years ago, and as farming was a new experience to me at that time, I wondered if all farmers were alike. Yet this was a kind-hearted man to his other livestock and to all his neighbors. It was simply "want of thought," and I did my best to convince him that he was mistaken.

There is still another benefit from the poultry journals that is felt by many, though seldom mentioned—and that is the pleasant acquaintances, sometimes growing into friendships, between advertisers and their customers.

There seems to be something about the raising of fowls that draws people together, and creates a bond of union between many whom we shall probably never meet in person. There is an opportunity for kindly advice, and generous dealing that makes many friends. We feel an interest in each other's success and our own fowls take on a greater beauty, when we read of the prizes won at the great shows by those whose "strain" we are breeding. We cannot but feel grateful to those who give so freely to their methods in raising their stock of such a high degree of perfection. It seems to me that there is no other profession in which there is so much willingness shown to help each other. Of course, there are some sad exceptions to this rule, but I believe many will certify to its truth.

The illustrations of standard poultry are of great assistance to the amateur. It is so much easier to judge from a picture than from words, what an ideal fowl should be. And I must confess that the photographs are sometimes a great consolation, for when we compare our own with the ideal, the difference seems much greater than when we look at a photograph of a winner. We can see some hope that ours may some day reach that position.

And last, we most appreciate those papers in whose company we can spend an hour, with the same feeling that we have, when we have been in good company, a company of kind, courteous people, with no unkind criticism or unpleasant wrangling. It is possible to condemn without losing one's temper—and while we appreciate the efforts of the editors to drive out all dishonest dealings, it is pleasanter for their readers if it is done in a dignified manner, without calling hard names.

"SOME WHERE."

But Where? and How? that is the question to ask ourselves. What goes with the tiny chicks that we succeed in getting hatched out but fail to raise, we take off old white biddy with 15 or by giving her a few from the incubator she may march forth with 20 fine little feathered babies. We feed them a few times and see them in to a nest box to spend the night but we rush on with our poultry business trying to get as many hens set as possible and trying to take off as many chicks as our neighbor or a few more, which is all right, but that one object has seemed to be our only object, for we have not remembered to give Old Whitey the help she needed, to rear such a large family, and when we do at last think of her, it is to find, that she has but six or nine perhaps of that once numerous flock. Well we say that is just my luck, well I must take off a couple more hens with chicks. I can't take time to look out for her. I must rush more eggs under more hens and never for a moment count the chicks lost, as so many eggs lost, or so many cents sunk, and so this wasteful work goes on losing nearly as fast or in some instances faster than they are gotten out, but when the general "round up" takes place at the end of the hatching season they find they have not more than one-third as many chicks as they thought they ought to have, then comes the cry, Where have they gone, "Some

where," truly, but where? Now a little less haste would have prevented waste. We should count our chicks after they are hatched as a miser counts his gold and not count it time lost to try to save as many of every hatch as it is possible to, and if we find we are capable of caring for more, then crowd the work on, for all there is in it, but keep guard over the work already done. There is a market for good eggs any time of the year, but for poor little neglected chicks that die, there is no redeeming them. A near neighbor has a good incubator and gets good hatches, besides setting hens, and along as early as June I have heard them say they had hatched out 1,500 chicks, and I have known that same neighbor to be obliged to buy their fried chicken for their Fourth of July dinner. They could not have any luck; their chicks never did any good—1,500 eggs means 125 dozen; if sold even at a penny apiece is more than the average poultry woman can pick up every day of the year.

In the poultry yard we find a great many small things that mean dollars to us if attended to properly. Some neglect to look after the broody hens, never attempt to save the flesh and time of the hen by penning her up a few days, then turning her out to go to laying again but will let her sit till there is not enough left of her to make a grease spot, then sell that little to a chicken buyer or perhaps trade her to a tinware merchant for a tin cup and find it leaks

after the fellow is out of sight. Now why not fatten the old hen and make a respectable object of her and get 50 cents at least from her? It is a good trait in any man or woman to get the very best out of everything they undertake, and if money is to be made out of poultry no item must be counted small and overlooked. There is no dishonesty in making the best we can out of everything our hands find to do, and by doing so we will find it places us a good way on the road to success and prosperity.

MRS. A. HENSLEY.

Lexington, Ill.

HATCHING AND RAISING BANTAMS.

Dr. William Y. Fox, Taunton, Mass., gives his method of raising bantams.

After about fifteen years' experience in raising bantams, I have at last got down to a system that gives good results and, at the same time, is the least work of any method I have ever employed. I hatch from three to five hundred chicks every season so it is important to have as simple a method as possible. With my early methods and the use of hens for setters and mothers I could not possibly raise over half the bantams that I hatched. Now I raise better than 90 per cent. I use Cypher's incubators and Old Homestead brooders and nothing else. The brooders are in sheds opening towards the south. The floor of the sheds is cement. Each fresh batch of

A Knock at Your Door

Here is a new proposition for poultrymen only. It means more money to every one of them who will thoroughly investigate it.

It is simply a co-operative plan which has been carefully worked out to combine the poultrymen of America into an association for their mutual benefit.

Co-operation is not an unknown force; it is the lever that moves all great commercial enterprises today. It turns failure into success, and makes many things possible that could not be without it. That the progressive poultrymen of America are ripe for such a plan as is offered to them by the POULTRYMEN'S CO-OPERATIVE ASSOCIATION OF AMERICA is proven by the responses we are receiving. Here, for the first time, is presented the opportunity for poultrymen actively and personally to participate, as partners, in a gigantic scheme of co-operation that will benefit them, as a class, thousands, aye hundreds of thousands, of dollars every year. The object of this Association is to combine and centralize the purchasing power of its thousands of members, thereby reducing the cost of every article the poultryman requires in the conduct of his business. Later on, when the Association has become more thoroughly organized, it will include a selling department, which

shall take the poultryman's products and market them. It isn't necessary to dwell on this benefit to the members. The POULTRYMEN'S CO-OPERATIVE ASSOCIATION OF AMERICA is organized to work for the betterment of all the trade conditions of its members. It will save them money—it will earn them money.

That the benefits may be as extended as possible and the influence of its co-operation interest a great number of poultrymen, the Association invites membership from all over the country. It offers the poultryman a profitable investment for a small sum. It insures a constant saving on his purchases. It guarantees a liberal dividend beside. It will limit the amount he can invest, but it will not limit the benefits of his membership. A \$5 investment entitles each member to all the benefits that a \$100 investment would. It will not return as great an amount in dividends—that's all the difference.

Already thousands of poultrymen have joined the Association, and applications are pouring in every day. It will pay you to invest \$5 in a paid-up, non-assessable Life Membership Certificate in this Association. It will pay you to invest more if you desire, but you cannot afford to let this chance go by.

Opportunity knocks now at your door. Don't turn it aside with a shrug of your shoulders. Investigate it thoroughly. The wise man proves his opportunities and profits by them. Be wise and write for free prospectus, "A Knock—Opportunity," and read it carefully, weigh its arguments and "see if they be good." If our proposition won't bear your closest scrutiny, turn it down, but don't turn it down and miss its benefits from force of habit. Write for the prospectus today and ask for "A Few Comments" from prominent poultrymen you all know—see what they think of this plan. Address all communications to

Poultrymen's Co-operative Association of America. 321 Mutual Life Building, Buffalo, New York.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 17 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

Prof. Henry says that success is only obtained by concentrating all efforts upon one line.

A two-years' course in Hog Raising:

Teaching how to be successful.

How to secure the greatest profits.

How to get 17 lbs. of pork out of a bushel of corn and 19 lbs. from a bushel of wheat-fed hogs.

How to feed to double the growth and gain over usual methods; only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the subscription to this paper, the costly experience and gathered wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says "Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the **American Swineherd** and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition the wonderfully suggestive picture in colors, "Uninvited Guests," suitable for framing, showing the pigs partaking of a meal uninvited.

This equips you for a successful hog business.

AMERICAN SWINEHERD

542 Como Bldg., Chicago, Ill.

chicks goes into a brooder that has been washed, inside and out, with a hot disinfectant solution, the floor of the shed being also cleaned and soaked in the same solution. Sulpho-naphthol is my favorite for this work. The brooder floor is covered with cut clover and cleaned every second day. The shed floor is covered with clean dry sand. The temperature of the brooder is kept as the chicks want it. That is, I am guided more by the way the chicks act, than I am by the thermometer. Give enough heat anyway. They will find a cooler part of the brooder if they get too much. The feed is chiefly a prepared chick food, a combination of different grains, ground fine enough for small chicks. I am not particular as to the brand. I take what my local dealer happens to carry. This is fed on the sand in the shed and there is always some before them. Once a day, for a couple of weeks, they get hard boiled eggs, all they will eat. After that, they have a box of beef scrap before them all the time. They are fed all the green food they want, whatever the garden affords.

When the chicks are about three weeks old, never sooner, they are let out of the shed into small covered yards and no change is made in the feeding until they can eat whole wheat and cracked corn, when these take the place of the chick feed.

If we believe all we read about feeding chicks, I am all wrong and I am very well satisfied to be wrong in theory, because the results are so good. I have tried faithfully about every known food or method of feeding and never could raise over 70 per cent and many years a much smaller one. In disgust I took this way three years ago, simply because it was so easy and hoping results would be no worse than in previous years. Imagine my pleasure when I raised every one of the first brood and about 95 per cent of all hatched that season.

Let any one say that this way is good only for bantams. I will add that last March I hatched 55 penciled Wyandottes for utility purposes and treated them exactly as I have tried to explain. I have not lost one of them and at just two months old I began to kill two-pound cockerels for broilers. Now at less than three months I have pullets over three pounds and the whole flock is as hearty a one as can be found. Hoping that this may be of interest to some other bantam crank and be the means of saving a few of his precious chicks, I am,

DR. WM. Y. FOX.

Taunton, Mass.

As the thermometer goes up the enthusiasm of some poultrymen goes down. These are not the successful kind and it is well to bear this in mind. The winning birds at the shows next winter will be the ones which are properly pushed during the hot summer months.

Provide a large frame, say 6x6 feet, covered with lath 3 inches apart on all sides and on top, in which to feed the chicks. They get theirs then and the large fowls don't annoy them.

Keep the chicks growing during the warm weather, by giving them proper care and feed.

Insures a full milk pail Pratts Cow Tonic.

Stop Feeding Hens That Won't Lay

Do What Mr. S. L. Hirschey, of Castorland, N. Y., did. He writes May 17, '05:

"Your Walter Hogan System of selecting layers is O. K. After reading it over I selected from my Leghorn pen of 21 birds, four I picked as non-layers. The first week's test showed the 17 layers laid as follows: each day: 13, 11, 13, 10, 8, 18, 9 eggs respectively. The non-layers 0, 2, 1, 2, 1, 2, 3 eggs. You will see I found the drones at first attempt. It's a great system, as anyone can learn it, and it's just what the poultryman needs to stop his biggest leak."

We have lots more such letters. Here's one on selecting for breeding purposes.

Ladonia, Texas, June 1, 1905.

"I selected my breeding pens after reading your System and would not now be without it for any consideration. I regret I did not have it long ago. I put a cock with one pen that according to the system would not fertilize. Later I set the eggs as a test and found they were not good. It is certainly the greatest aid ever discovered for poultry keepers."

W. G. NUNN,

Vice-Pres. First National Bank, Ladonia, Tex.

A request brings full information from Walter Hogan Co., 17 Natl. Bank Bldg., Fergus Falls, Minn.

THE HOUDAN FOWL.

By REV. C. E. PETERSON.

When in the near future the new standard of perfection will be in the hands of the fanciers all over the country, every one of them will, of course, turn to the pages first that deal with the breed that they are particularly interested in, and it gives us considerable pleasure to assure every genuine Houdan fancier, that under the caption of Houdan he will find a standard that will cover every detail of the bird of his choice, and the work of men that have made the Houdan what it is today, and who know a Houdan when they see it.

It was with genuine pleasure that we examined the sketches made by Franklane Sewell of a Houdan male and female, the sketches of fifth toe and comb, making as a whole a very clear conception of what a Houdan ought to be.

All of these sketches and the printed matter will in every particular give us a standard that will either make some breeders of spurious articles get out of the business or try to produce a Houdan

First Boston hen, 1905; pronounced to be one of the best colored birds ever shown. Special ribbon for shape and color. Weight, 8½ pounds. Bred and owned by Rev. C. E. Petersen, Franklin, Me.

that is not a libel on one of the best fowls on earth.

The fact is that a number of men are today breeding Houdans that as far as blood is concerned are Houdans all right, but the Houdan that is worth little over the market price because in no particulars do they excel the early importations of the early sixties, when the Houdan fowl was imported into this country. Houdans that always appear at great disadvantage when in competition with Houdans that come from an acknowledged strain, that for years have been bred up to a high standard.

For this reason very few of the breeders of this inferior kind of stock are willing to exhibit where any competition is to be found, and therefore advertise in supposed to be "Houdan news" articles the unknown quality of egg production, which, of course, cannot be proven until the birds are bought and paid for, and a year's time of observation to see whether the phenomenal laying strain is fact or fable, and the last generally proves to be true.

Some of the defects in these inferior

stocks of Houdans are easily to be noticed when compared with even a good sketch or photograph.

The crest is very small and ill shaped, and there is hardly any beard except a few feathers with a split in the center what may be called a remnant of the muffling, but a very poor apology for a beard.

All this in view of the new standard, as well as the old, calls for a very large crest, well-shaped, full and compact, falling over the neck of the bird in an unbroken mass of feathers, high in front and above all things smooth.

This is what is wanted for crest, and not the straggling awry all over the head and eyes, sort of an appendage that have no rights to even the name of a crest.

The beard must be long and pendulous, and is an entirely different thing than the muffling, and one of the chief characteristics in a well bred Houdan.

As to shape we find the same lack of standard requirements, for instead of being low on the feet and of a massive blocky build, we find a narrow breasted, long in the leg bird, that in every way look more like a Leghorn than a Houdan.

These deficiencies are only a few of many others, suffice it to say, that faults might be found in every section of these so-called "French Houdans."

And it may be well to state here that the French Houdan is not bred in this country, and is not wanted, and cannot find a place in the awards of merit in any show room of any note, as they are in most every way outside of what the standard calls for.

And now for the benefit of the many new breeders of Houdans that have taken hold since we last wrote on the subject in this journal let us give a description of a well-bred Houdan.

The Cock.—A Houdan cock fully grown should not weigh less than seven pounds, the standard requirement. That weight should have been attained when the bird is in good breeding condition. Size in a Houdan is of great importance. I would emphasize this requirement by having the Houdan Club instruct its judges never to give the blue ribbon to an undersized bird, male or female.

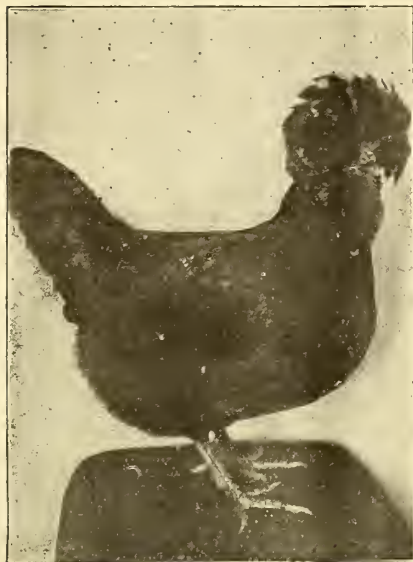

In form the Houdan is a squarely built fowl, somewhat resembling the Dorking in shape; a fairly long body, indicative of a good supply of breast meat, low on the feet, the hock coming nearly up into the fluff of the body. The shoulders, saddle and back are very wide. The latter straight with a slight drooping toward the tail, which should be carried moderately low and abundantly furnished with saddle and sickle feathers. A Houdan with an upright tail is not in good taste with the massive build of the breed. The breast should be conspicuous for breadth and fullness. When I say fullness, I mean a good rounded breast coming well forward; the breastbone deep in the keel, extending from the forepart toward the tail, that there may be ample room for the production of flesh. The wing should be carried well up, properly developed, large, heavy and muscular. The thighs large, with legs firm, of medium length and moderately thick. The fifth toe should be quite distinct, well developed and curving gently upward.

The head should be of medium size carried well up, and surmounted by a

Don't be discouraged
Try Pratts Heave Cure.

Made by Pratt Food Co., Phila. Over 30 years old.

large crest composed of evenly mixed black and white feathers; in texture they should be similar to those of the hackle falling well backward upon the neck and sides of the head, incasing, as it were, the head in a half circle. It should not be of the topsy turvy kind, with feathers in it, standing up straight, and front falling forward over the eyes of the bird,

Houdan pullet, daughter of first prize Boston hen. Too dark for an exhibition pullet but will make a finely colored hen. Bred and owned by Rev. C. E. Petersen, Franklin, Maine.

but a crest perfectly smooth, high in front, making a natural background for the comb, falling backward upon the neck in an unbroken mass.

This is the crest of a well-bred Houdan, giving style and finish to the whole bird.

The beard should be strongly developed and pendulous in shape; it should be long and full—not a few feathers curling up-

First prize Houdan cockerel, Boston, 1905, son of the \$100 Champion Challenge Cup Winner. Weight, 7½ pounds. Bred and owned by Rev. C. E. Petersen, Franklin, Maine.

ward between the wattles, with a split or division in the middle. The muffling should be in abundance, hiding the ear

lobes and almost covering the face, curving upward to the back of the eyes and there joining the crest.

The comb must be V-shaped, the smaller the better, but well defined; natural absence of comb is not to be desired.

Free from side sprigs or extuberances of any kind.

The Hen.—The Houdan hen, like the cock, should be a full square-bodied bird, weighing not less than the required six pounds; seven or eight pounds would be still better, and birds of these weights are not hard to find in any well-bred strain. She should have a broad, straight back, sloping as in the male imperceptibly toward the tail.

The crest should be large, globular, full and compact, with the feathers closely overlapping and enough of them to more than fill your hand. Females with fallen crests should be discarded. An evenly mixed crest of black and white feathers is, of course, here as in the male to be desired.

The comb as in the cock should be V-shaped, but very much smaller; in a well-bred specimen the crest should almost hide it. Short but stout shanks, fifth toe well developed, and, as in the cock, curving gently upward.

Color Requirements.—The color of the plumage in both male and female should be black and white; black to predominate and of a good greenish tint. The white should be clear without the slightest tinge of straw color; the frosty or grayish mixture, which is neither black nor white, should not be present. There is also a kind of black with a rusty tinge to it that is not at all desirable, neither is the only too much prevalent purple-black, and where there is also bronze-bars present it is, of course, a good deal worse.

The standard calls for black and white, evenly mixed in the proportion of three black feathers to one tipped with white. This is the stumbling stone to so many fanciers. They will continue to exhibit birds that are too dark in color. These birds are all right in the breeding-pen, but is not what the standard calls for, nor is it Houdan color. Yet a bird may be very dark, and for all that, be evenly mottled with white all over the body. This is the kind of mottling we desire.

No judge will pass such a bird for being too dark in color, neither is such a bird likely to fail in her first moult, nor in the breeding-pen to produce chickens with the desired markings.

It makes a great deal of difference whether the white is all in one or two places or evenly distributed all over the body of the bird.

A feather all black with a little pure white on the end of it is what makes a beautiful spangled bird, and all right for breeding as well as for exhibition purposes.

On the other hand, a bird with large splashes of white here and there on the body, with wings of a color that the standard does not call for, having more white than is permissible in it, describes fairly well what I mean.

Such a bird is not fit to exhibit and of no value in the breeding yard.

Wingbows and secondaries should be black, primaries, black and white.

The feet should be pinkish-white, mottled with black.

Best remedy for pink eye Pratts Distemper Cure.

Made by Pratt Food Co., Phila. Over 30 years old.

The eye a bright red. In characteristics wide awake and alert in all its movements.

This is the kind of Houdan all breeders of any note and worthy of the name are striving to produce, and that some of the older ones in the fancy has produced, by hard work and skillful selection, making their names synonymous with the strain of Houdans they have produced that for beauty and real utility combined stands for all that is excellent in the Houdan.

To produce that kind of a bird by mating will be the subject of a future article, so that when next fall comes around the beginner may know what birds to keep and what to reject.

JAS. W. BELL, Congress Park, Ill.

Mr. Dudley Takes Issue with Mr. Rigg.

Editor AMERICAN POULTRY JOURNAL:

I notice in the article entitled "A Plea for More Simplicity," by Mr. Rigg, in June AMERICAN POULTRY JOURNAL, his views on convenient housing of chicks. I would take issue with that gentleman in regard to the convenience and desirability of his cooping arrangement. I think the small coop such as he describes would be all right where only a few chickens were raised yearly, but where anything of a business was done at it, it would be quite a laborious job to care for the chicks in such quarters. Ten or a dozen of such coops would not be much bother perhaps to care for, but when forty or fifty such were needed to shelter the young stock the labor of caring for them might mount up into alarming proportions.

Another feature of his which I should not like would be that in the portion of the coop in which the grain and scraps are kept has no floor, which would allow mice and other vermin to burrow under the edges of the coop and consume the contents of the boxes, which would materially increase the expense of raising the chicks and also increase the danger of losing them by rodents.

The writer's pet plan for housing chicks has been to use colony houses, about 6x10 feet in size, about 6 feet high in front and 4 behind, built on runners of 3x4 stuff, without floor. Sufficient windows are placed in the high-side, facing south, to amply light the interior. Four hens, each with from fifteen to twenty chicks, according to the size of the hens and the season of the year, are placed in the house, the hens being confined in dry goods boxes about 2 to 2½ feet square, with the bottom left in for a floor and the boards on one side taken off and, laths substituted in their place to restrain the hen.

By placing a board or frame covered with fine wire before the opening at

night the occupants are entirely protected from all animals with a taste for chicken flesh. For holding their grain and scraps, one large hopper is made which is fitted with a lid which can be closed tightly over the opening, and which when closed at night effectually prevents the box being used as a free lunch counter by all the mice in the neighborhood. After the chicks become larger and the mother hens are removed, the dry goods boxes are also taken out and roosts put in, and after they are old enough to distinguish the sexes, they may be separated and the cockerels removed to fattening pens or yards, while the thirty or forty pullets, as may be, can remain in the house until time to place them in the laying or breeding pens. Then the house can be used to winter surplus cockerels for the spring trade, or it may be used as a breeding pen for ten or a dozen fowls. They may also be used to set hens in at the hatching season, or outdoor brooders may be placed in them before the weather is suitable for their being used out of doors. One of the houses may be hauled up, in the fall, to join on to the regular poultry house and may be filled with six to ten inches of leaves or litter and with the windows left open forms an ideal scratching shed for the laying hens all winter until wanted again for other purposes in the spring. In fact, such houses are exceedingly useful the entire year, and I would earnestly urge any poultry keeper who raises a hundred chickens a season, who has not already used one of these houses, to try one and see if it isn't the handiest building about the place. These buildings should either be built of matched lumber, painted, or covered with neponset or other light building paper, as shingles or clapboards make them unnecessarily heavy, which proves a detriment when moving them about from place to place.

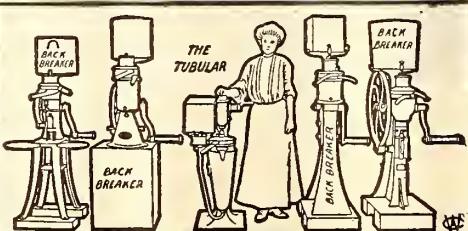

ALVIN D. DUDLEY.

Kendal Green, Mass.

TUBULAR--or "Back Breaker?"

When you see the waist low Tubular you can't be driven into buying a back-breaking, "bucket bowl" separator. Can and crank are just the right height on the Tubular. Here is the largest Dairy Tubular along side four "back breakers." The girl with her hand on the Tubular is 5 feet, 4 inches tall. This is an exact reproduction from a photograph. Which kind for you? Makers of "back breakers" try to get their cans low by setting the cranks low. High cans break your back backward—low cranks break it forward. Unless you are a double jointed giant, you'll find a high can is no joke. To show you how high these "back breaker" cans really are, when the machines are set high enough to turn easily, we raised these "back breakers" 'til their crank axles were level with the Tubular crank axle. "Back breaker" makers don't like this picture—it's too true. They try to squirm out of it. You wouldn't like turning cranks as low as "back breaker" makers put them.

The low can is only one of many advantages Dairy Tubulars have over all others. Dairy Tubular bowls are simple—"back breakers" are complicated. Tubulars are self-oiling—no oil holes to fill up. "Back breakers" are oil drippers and oil wasters. To learn a lot more about Tubulars, write today for catalog N-205

AUG. D. ARNOLD WILL SELL OUT.

On account of a change in the estate of Aug. D. Arnold's father, who recently died, Mr. Arnold is compelled to close out his entire stock of Buff Leghorns and Silver Penciled Wyandottes, good will and all.

Aug. D. Arnold of Dillsburg, Pa., is well known wherever Buff Leghorns or Silver Penciled Wyandottes are bred, which follows with it that his stock is known all over the world, and his winnings at Madison Square Garden, N. Y., and St. Louis World's Fair make ample assurance of the proof of this statement. His Buff Leghorns have been bred in line longer than any other strain of this variety in the world, and the demands for them have been heavier this season than ever. This stock must be sold at once together with the good will and all matters connected with the business. It is a grand chance for someone to start in with one or both of the popular varieties, and thus enable the buyer to be at the top from the very start.

At St. Louis, Mr. Arnold won the Championship Cup for the best collection of Buff Leghorns and had plenty of points left. His Silver Penciled Wyandottes have never failed to win 1st on cock and 1st on cockerel at Madison-Square Garden. At the last show held there, he won 1st cock and 1st cockerel, and the three first prize New York males are in Mr. Arnold's yards now and go with the lot when sold. The females of this variety average as fine as any flock in America. This sale is a matter of so much importance that breeders should write to Mr. Arnold at once.

TIFFIN, OHIO.

The next annual show of the North Western Ohio Poultry and Pet Stock Association will be held at Tiffin, Ohio, Jan. 10-13, 1906. Chas. McClave has been secured to do the judging. V. Crabtree, secretary.

THE JUNE AMERICAN BOY.

In the thirty-two pages which comprise the June *American Boy* there is not a dull line; and both in variety and class of matter the paper is head and shoulders above any other periodical for boys. The cover page, entitled "Texas Bids Goodbye to the President," showing a great throng of happy, smiling faces, makes an appropriate index to the high-class stories and articles in the magazine. Kirk Munroe's stirring story, "For the Mikado," is advanced three chapters. "A Page Without a Pull," being the story of a page in congress, finishes most happily, and Mr. Spalding concludes "The Origin and Early History of Baseball." Further chapters of "My Four Years at West Point," and "A French Frog and An American Eagle" are given. Among the many larger articles and stories which will delight the reader are: "Bunker Hill Day in Boston," a most suitable story for June; "The First Marathon Race," which gives the origin of this race which is now a part of important athletic meetings. "Animal-Devouring Plants" tells of the queer food that certain plants require. "In Lemster Woods" is a thrilling story of two boys and a hunger-crazed wolf. "Hendricks' Last Run" is a fine story of school athletics. "An Analysis of Sprint Running and Starting" will appeal to all who go in for this sport. "A Shivarree" at Wright's is a humorous story. "The Sylvaton Idea" tells how tree planting became popular in Dakota. "Japanese War News" is an interesting story about the Japanese newsboy and the "Extra."

"WITH PERRY IN JAPAN."

John S. Sewall was captain's clerk on the Mississippi, the steam frigate that carried Commodore Matthew Calbraith Perry, in 1853, when he was the bearer of a letter from our government to the mikado asking for a treaty. The demands of this treaty, its signing and its influence are matters of history, of course; but personal recollections of such an expedition are especially interesting reading just now, and the July *Century* will contain Mr. Sewall's story, "With Perry in Japan," in which history will be pleasantly enlivened with anecdote and reminiscence.

SUMMER HEALTH AND COMFORT.

The season of hot weather is a trying time for most every one, particularly the housewife, upon whom depends in large measure the well-being and good nature of her family. Hot weather health and comfort is discussed, with many practical recommendations, by Isabel Gordon Curtis in the July *Delicatore*, the paper being a chapter in "The Making of a Housewife." Other seasonal suggestions are given in "A Snow Ball Luncheon," illustrated; "Milk as a Food," "Fruit Fantasies" and "New Ways of Serving Strawberries," containing recipes for many refreshing summer preparations. Plans for a summer camp and house furnishing ideas are other features of this number of the magazine and are of particular interest for their timeliness.

BUSINESS PRINCIPLES IN THE HOME.

The adoption of business principles in the home is not only one of the ways to obtain happiness, it is the only way, says

Spavin cured in its early stages
Pratts Veterinary Liniment.

Made by Pratt Food Co., Phila. Over 30 years old.

Good Housekeeping for June. We are speaking now of the average household composed of an average man and an average woman. And here is the first step toward happiness: First, the husband must have the absolute right to refuse money to the wife; second, the wife must have the absolute right to demand money from the husband. It doesn't look like affection, it doesn't seem connubial. But analyze it.

The June number of *Outing*, with its two dozen articles, ranging from the best and latest fiction from the pen of Charles G. D. Roberts to the thoroughly practical solution of one very vexing country-living problem, emphasizes the wide appeal this handsome monthly is making to the magazine reading public.

Mr. Roberts' new serial is called "Red Fox." It is perhaps the best animal story he has yet written; and that is enough to say of the new work of a writer who has given us the most interesting, the truest to life, animal stories.

Of travel articles, Mr. Terry's paper of the many strange human types which meet on the prosperous island of Java, is of unusual merit and of practical timeliness now, when all eyes are turned to Far Eastern waters.

In *Scribner's Magazine* for July there is a narrative of unusual interest at this time. It is a very full account, written by John Kilby, a quarter-gunner on the Bon Homme Richard, of the great sea fight which is the most brilliant event in the history of Paul Jones. The late Augustus C. Luell, who a few years ago wrote a brilliant history of Paul Jones, soon after its publication was put in possession of this unpublished narrative by the descendants of Kilby, who live in Virginia. The old sailor wrote the account in 1810, and Mr. Buell says it is remarkable for its accuracy, except in some confusion of names. Kilby stood by Paul Jones when Pearson surrendered, and gives a vivid account of the incident of the sword. The whole story is as realistic as though written yesterday of a current event.

G. M. Shook, proprietor of the Rosedale Poultry Farm, of Joplin, Mo., writes that he has about one hundred S. C. Black Minorca hens for sale now at a very reasonable price. They are all good birds; in fact they are most of his 94, 95 and 96 point birds, and are two years old; this will demonstrate that they are not culls. These were all trap nest birds and are heavy layers, and were selected as heavy layers to breed from last year. The coming on of young stock makes it necessary to dispose of these at a bargain.

C. W. & H. E. Hosmer of Union City, Mich., have a fine lot of Single Comb White Leghorn youngsters coming on, and wish to dispose of some of their old stock to make room for them.

EVERYTHING TO ITS USE.

No man in his senses would use a four-horse harrow to smooth up a pansy bed. This would not be much worse, however, than using laundry or toilet soaps for shaving. Common soap, like the harrow, is intended for coarse work. It will yank up the dirt in fine style, but if used for shaving, it will burn and irritate the face, and make the operation of shaving a horror. You need a special soap for shaving—one that will soften the beard and leave

Only one best
Pratts Powdered Lice Killer.

the face cool and smooth—such a soap as the famous Williams' Shaving Soap, made by the J. B. Williams Co., Glastonbury, Conn., who will send you a free trial sample if you will write them. Their generous offer appears in another column.

Mrs. T. F. Leonard, Mt. Sterling, Ohio, who breeds choice White Wyandottes, is offering some bargains in breeding this month. She has also made a big reduction in eggs for the balance of this season. Look up her ad elsewhere in this issue and write her at once if you want a bargain.

J. A. Leland of Springfield, Ill., is now offering a majority of his this year's breeders and their eggs at half price, and writes that he does not believe that the same quality of stock can be bought for less money. He reports a good egg trade with but few reports of poor hatches. He breeds Rose Comb White Leghorns, Single Comb Buff Leghorns, Barred Plymouth Rocks and Light Brahmas.

The Otter Creek Poultry Farm Co. of Watertown, N. Y., announce a slaughter sale of breeders at less than half their value, including 100 Barred Plymouth Rocks, 100 S. C. White Leghorns and 50 S. C. Black Minorcas. These birds are all young and healthy and are great layers. They have also reduced the price of eggs for the balance of the season. This is without question one of the great bargains of the year and breeders should correspond with them.

July and August are the two most trying months on the young chicks and behooves the fanciers to pay strict attention to the comforts of his feathered pets during the hot days.

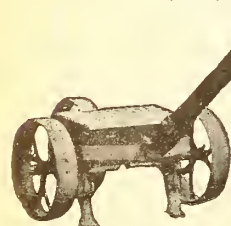

Where chicks have free range during July and August it is not necessary to feed much meat, as the bugs and grasshoppers they get on the range will be sufficient.

Use a good liquid paint on the roosts. I paint the bottom of the roost-pole and this seems to answer the purpose, thus preventing the plumage from being soiled.

KILLING FOWLS FOR THE TABLE.

About this time of the year a good many small poultry keepers will be thinning out their stock by killing and eating the surplus cockerels. These young birds take up a lot of room when the run is very limited, and as they would be of no use to keep for stock purposes—at least the cross-bred cockerels would not—the sooner they make their appearance on the table the better. Professional poulterers and many farmers have so much practice in killing chickens that the operation is to them a very simple one. The amateur, however, generally finds it a difficult matter to deprive his fowls of life, and in his rough endeavors is sometimes guilty of causing them considerable sufferings. Such primitive attempts as trying to chop the heads off with a garden spade, or else screwing the neck round and round without any apparent result, are not uncommon. Occasionally people will give up poultry keeping because they find it too difficult and unpleasant to kill their birds humanely, while others always send them to the poulterer to be slaughtered.

Wringing the neck, which is considered the most satisfactory and the least painful mode, does not consist in turning the neck round, but in disjoining the vertebrae by a certain jerk. It is much easier to learn how to perform this if a practical illustration can be had from a skilled person. But this is not always obtainable. The fowl should be placed across the knees, breast downwards, with the neck held over the right knee. The neck is then quickly and firmly extended and the head bent back suddenly with some force. By this means the neck should be dislocated just below the junction with the head, and death should be instantaneous.

A method followed by a good many people who are too nervous or who are unable to wring the neck properly, is to tie the legs of the bird and then stick it with a small but sharp knife in the jugular vein behind the ear. This causes death in a few seconds, apparently without pain, only one or two spasmodic struggles being given. One of the easiest ways for a novice is to behead the fowl with a sharp chopper or axe. This is rather a dirty process, but if the bird is to be eaten at home it is as simple as any and one over which no mistake can be made; but it will not do if the fowl is to be sent to market, for it is the custom to sell the dead bird with the head on. Another way is to take the bird by the legs, and with a short thick stick strike a sharp blow across the back of the head. This should cause insensibility and death. If hung up afterward by the legs the blood will flow into the head and neck, leaving the flesh white. An efficacious and painless method of killing is to firmly grasp the neck with the fingers of one hand and swinging the bird round, holding the neck tight. The weight of the fowl will break the neck. The use of the knife by thrusting it through the mouth into the brain requires some skill, so it is more humane not to attempt this until shown by some one who understands it.

It is important that all fowls be kept for eighteen hours without food before being killed; the crop will then be empty and they will keep longer. After the birds have been killed it is advisable to pluck them while still warm. The feathers come out more easily and the skin tears less readily.

A. V. MEERSCH.

Poughkeepsie, N. Y.

\$50 IN CASH PRIZES.

...GIVEN BY...

American Poultry Journal Pub. Co.

If you know anything about poultry you may win one of these prizes. We want you to tell our readers briefly what you know about one or more of the following subjects:

The process of molting. Care of the fowls during this period. What to feed and how to feed it. Is delicate color and gloss of plumage affected differently by different foods. If so, how and why? A general treatise on the subject of molting.

The best and most thorough explanation of line-breeding, with a detailed plan for establishing a strain, a clear and concise statement of the principles involved in developing the desired characteristics of the fowl and embodying the results of too close inbreeding.

Preparing birds for the show room. Instructions which will enable the amateur to take advantage of the many little details, which add to show condition. How to feed and care for the birds during their close confinement in show coops.

Instruction to the beginner whose ambition is to get prominently before the public as a fancier and breeder and establish a paying business.

The best method of starting a market poultry plant. The amount of money necessary to purchase stock and the profit to be expected from the outlay suggested. The amount of ground, number and size of buildings required and suggestions in regard to economical and successful management.

How to advertise successfully. Points to be considered in selecting a medium. Conditions affecting an ad and hints on the advantage of continuous advertising.

Has the specialty breeder greater chances of success than the breeder of several varieties, as regards prominence and high prices for stock and eggs? If so, why?

Advice on management of incubators and the advantage of their use even though hens are available for the purpose.

Success with brooders. How to feed and care for the chicks.

Rules to be observed in getting the highest percentage of fertile eggs. Hints on house room, feed, care, selection and mating, as affecting fertility of eggs.

\$25 For the Best Article

\$15 For Second Best Article

\$10 For Third Best Article

For the next five best articles a copy of the New Illustrated Standard of Perfection will be given.

For the next five best articles, one copy of the book, "Why Poultry Pays and How to Make it Pay," will be given.

The list of subjects has been selected with a view to covering a wide range, so that every breeder will find some subject with which he is familiar enough to write upon with a fair chance of winning. THE CONTEST CLOSES OCTOBER 1, 1905. All copy must be in our hands not later than this date. The articles must be original and not have been published before. They must contain not less than 1,800 nor more than 2,500 words. The writer who covers his subject most thoroughly and presents it in the most comprehensive manner will be given first prize. We reserve the right to retain all articles sent in and to publish them, if we so desire, giving full credit to the writers.

These prizes are worth trying for. You can lose nothing but a little time and you may be one of the winners.

Prepare an article at once and send it in. Address

ON TO CINCINNATI.

The management of the Cincinnati Poultry and Pet Stock Association proposes to make good its promise that it will more than repay the American Poultry Association for voting to meet in the Ohio city.

The Cincinnati management is in the habit of carrying out a very successful show each season. The gentlemen in charge fully appreciate that "the eyes of the world (poultry world) are upon them," and they will, in consequence, put up a better attraction than ever before.

The officers of the association are as follows:

President—A. E. Brooks, Seventh and Freeman avenue.

Vice-Presidents—George E. Morlidge, F. C. Wright, E. M. Barnes.

Secretary—Thomas J. Foy, P. O. Box 122.

Treasurer—H. B. Clark, Seventh and Freeman avenue.

We will keep our readers fully posted in regard to this meeting. Cincinnati is ground where the Eastern and Western breeders can unite in making a very interesting exhibit.

THOMAS F. RIGG.

EL RENO, O. T.

The Canadian County Poultry Association was organized in El Reno, Okla., June 17, and the following officers were elected: President, A. K. Gore; vice president, L. G. Adams; secretary-treasurer, V. B. Allee; superintendent, S. W. Gerhart. The first annual show will be held at El Reno, O. T., Jan. 1-6, 1906. C. A. Emery, of Carthage, Mo., judge.

DWIGHT, ILL.

The second annual exhibition of the Dwight Poultry Association will be held Dec. 11-16, 1905. Ben S. Myers, judge; H. A. Wood, secretary, Dwight, Ill.

PRAIRIE DEPOT, OHIO.

The Prairie Depot, Ohio, Poultry Association was recently reorganized, with the following officers: President, J. E. Lucas; vice president, N. J. Werebaugh; secretary-treasurer, Rev. C. W. Collinge; superintendent, Ralph Basey. The exhibition will be held on Thanksgiving week and a fine show is promised as a great interest is taken in breeding fancy and thoroughbred poultry in this township, which is particularly well adapted for the business.

CHARLOTTE, N. C.

The ninth annual show of the North Carolina Poultry Association will be held at Charlotte, N. C., Jan. 16-20, 1906. H. C. Schwab, judge; W. B. Alexander, secretary.

CLARKSBURG, W. VA.

The second annual exhibition of the Clarksburg Poultry and Pet Stock Association will be held on Dec. 20-22, 1905. T. E. Orr will do the judging. Send for premium list, which is now ready for distribution.

Care of Chicks During the First Eight Weeks.

Editor AMERICAN POULTRY JOURNAL:

I am going to write a short sketch upon rearing chicks to the age of 6 or 8 weeks. If you think it will be of any benefit or interest to any of the many readers of AMERICAN POULTRY JOURNAL or not too tiresome, you may put it in print. In the first place we must take the chick from the very time it comes out of the shell and give it our attention if we would be successful. I leave my chicks in the incubator for at least 48 hours after the first ones come out of the

about 60 hours old before putting any feed into its crop. I have a little fine grit in the brooder for them to pick at and give from that time on plenty of pure, clean water. When feeding is begun, then feed regularly five times per day just enough good feed that they will clean it all up and still be a little hungry. I like to feed the prepared chick feed to beginners, such as is advertised in AMERICAN POULTRY JOURNAL. One of the principal things to look after in rearing chicks, either in brooders or with the mother hen, is "cleanliness." It is said that "cleanliness is next to Godliness," and I certainly think that saying

small and gradually work down to (some people say) three times, but I say four times a day, for I feed four times a day to all growing stock until matured; keep the heat up and not over 90 degrees and not under 70; keep them scratching for their feed and I think you cannot help but be successful. One thing more and I am through. I am breeding S. C. W. Leghorns and find them no trouble to rear at all, except just when they begin to feather over the head and crop. Now I suppose all Leghorn breeders find the same trouble. I have about overcome the trouble. I feed a mash feed at noon made of oats, rye, corn, equal parts, crushed together very fine and mix with common bran. I mix it with prepared meat well scalded or better yet granulated milk, scalded for one or two hours, then stir in the above meal until it is nearly dry. I hope the readers may get at least one good point out of this and will not think me egotistical for using I so often, but I was only telling what I do, and not telling others to do it unless it sounds reasonable, and what is successful with me may not be with others, but hope some will try the above.

JOS. A. BURKHART.

Smithsburg, Md.

Keep all hens with broods in their coops, allowing only the chicks freedom, at least till the dew is off the grass.

shell and after having my brooders heated to the proper temperature (say 90 degrees at the highest and maybe 88 is plenty high enough), I put the little chicks carefully into the brooders and am very careful not to put over 50 in any brooder and would rather have only 40.

I do not feed my chicks one morsel of feed until they have been in the brooder at least 12 hours, making the oldest chick

Original stock food in America
—Pratts, over 30 years old.

is nearer true in poultry rearing than in anything else. Clean the brooder thoroughly twice a week and when it is all clean pour about two tablespoonfuls of coal oil over the bottom and dust over that enough South Carolina dissolved bone to dry up the coal oil and take up other moisture that will be made there in the next three or four days. The South Carolina bone kills all the foul smell arising and is one of the best things I can find to keep down lice. If you can keep down lice, keep clean quarters, feed five or six times a day when

You Must Sleep.

If you cannot, it is due to an irritated or congested state of the brain, which will soon develop into nervous prostration.

Nature demands sleep, and it is as important as food; it is a part of her building and sustaining process. This period of unconsciousness relaxes the mental and physical strain, and allows nature to restore exhausted vitality.

Dr. Miles' Nervine brings refreshing sleep, because it soothes the irritation and removes the congestion.

It is also a nerve builder; it nourishes and strengthens every nerve in your body, and creates energy in all the organs.

Nothing will give strength and vitality as surely and quickly as Dr. Miles' Nervine.

"During the past winter I had two attacks of LaGrippe which left me very weak, and in bad condition. I was so nervous I could not sleep. My wife, after trying different remedies, went for a doctor. The doctor was out, and a neighbor recommended Dr. Miles' Nervine, and she brought home a bottle. I had not slept for some time, and had terrible pains in my head. After taking a few doses of Nervine the pain was not so severe, and I slept. I am now taking the second bottle, and am very much improved."

HENRY M. SMITH, Underhill, Vt.

Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Miles Medical Co., Elkhart, Ind

IN ANNUAL SESSION.

The annual meeting of the Petaluma Incubator Co. was held at the office of the company at Petaluma on Wednesday evening. Full reports were presented from the company's eastern branch at Indianapolis, and the San Francisco store as well as the factory and sales department at Petaluma. The conditions proved to be most satisfactory and encouraging to all interested in the company. From the net gain during the past year a dividend of 6 per cent was declared and a very good balance added to the surplus. Plans for the future were discussed among which is not only some additions to the already large factory, but the addition of considerable new machinery. The company starts with bright prospects for a largely increased trade for the coming year.

The last year's officers were re-elected as follows: L. C. Byce, president; H. C. Gray, vice president and general manager; C. H. Taft, secretary; H. R. Campbell, manager poultry supplies; George A. Chittenden, foreman finishing department.

"HAPPY HOOLIGAN" SPEAKS FOR HIS FAMILY.

I have been wanting for a long time to introduce myself to the beautiful birds, whose pictures I have seen, clipped from THE AMERICAN POULTRY JOURNAL to decorate my cozy home nest, and finally concluded that it was a funny thing, if a pretty bird like myself had no right to his own paper and no say in the matter regarding his own family; so here I am with wings spread and beak apart to tell you how we are taken care of these wintry days. While I am not a vain bird, I shall have to admit that I am a beautiful Buff Rock Rooster, named "Happy Hooligan." My family numbers about thirty. Ten children and twenty grandchildren: all happy like their parent: ever active, with good appetites and fine manners. Our mistress is bubbling over with enthusiasm, in regard to our deportment, so lest she get a "swelled head," having prevented our getting one, I will crow low, before I go any farther.

Very early in the morning, almost at break of day, a nice warm breakfast of potatoes and meat scraps is emptied into our feeding trough: then into a bundle of hay is scattered a liberal al-

lowance of warmed wheat and oats, and very often two or three charred ears of corn are thrown in to us. A "punch ball" of cabbage suspended by a string from the ceiling, causes all birds to have a "bill" in it and the best punchers receive—the most cabbage. A dish of gravel or cracked oyster shells, are ever at our disposal, and a pan of fresh water is supplied twice a day.

Our coop is cleaned every morning the year around so we never sit over our droppings; causing us to be a very healthy flock.

When I spoke of my family, I was so overcome, that I could not mention the fact that fourteen fine pullets (with nary a tick or black feather), was sold for a good price, also three beautiful cockerels, while seventeen of the latter were fattened for Xmas dinners. But I am too "chicken hearted" to dwell on these sad scenes, so I will pass on.

Since November 1st my family have produced 17 dozen eggs, all of which sold for 25 cents and even more a dozen. The other day a neighbor called to see us, and I overheard her ask my mistress the secret of her success in the poultry business (and as we fowls are a bit curious), I "rubbered" my neck and I heard her say—"it is largely due to the general information contained in the AMERICAN POULTRY JOURNAL," and I "rubbered" a little higher as I saw her take out a pencil and say "put my name down as a new subscriber"—(fact)—I gave one long, loud crow.

Now pretty birds should I not get the axe, or a "fight to the finish," for venturing in among you, I may come again, and tell you many of our secrets, and why we have proved successful from young chicks to flourishing hens. With a farewell crow, I will fly over the page. Sorry, indeed, that mistress must sign her name, but I can only make tracks.

A NEW POULTRY BOOK.

**Especially Written and Designed for the
Beginners—Sent on Approval.**

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—What do you consider to be the reason where chicks hatch in sixteen days? I set a hen May 24, in the evening, on nine eggs, and yesterday noon six chicks came out lively as crickets. Although I have set hens many years, I never had such a thing happen before. (Set my first biddies twenty-seven years ago.) The conditions: Eggs were laid May 14, 16, 17, 18, 19, 20, 22, 23 and 24. Hen that laid them is on the fifth year; in a pen all by herself, and a small yard 6x3 by herself; let out once a day to cockerel of same strain, and lays her eggs in a nest of her own. Eggs always taken before they get cold. As I value this hen and chicks after her more than others, I would like to know if any special treatment is of value. I took the three remaining eggs and as they seemed to be going on in the same way as they should, I put them under a hen that sits on six eggs from aforementioned hen. The hen is fed just as the rest, only a little more care is given her than any others, because she is my foundation hen

and can do stunts as a trained dog. Her record is 278 eggs March 1, 1903, to March 1, 1904. Some hens after her is just like her.

Chicago, Ill.

[Can some of our readers explain this? —Ed.]

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—I have some very nice chickens and they have always been healthy. I have recently lost two and on opening them found their livers covered with yellow spots. Please tell me what to do for them. Some of my hens have a cackling, heavy breathing; seem to be well, but when I go into the henhouse they all seem to be wheezy. What is the cause? The chickens with the liver trouble are about six weeks old.

Woodstock, Ill.

Answer: Tuberculosis of the liver is what caused the death of your chicks. This disease is incurable and the only thing to be done is to thoroughly clean and disinfect your houses and runs. We believe that your whole flock is affected

and that you have bred from diseased birds the past season. Put your place in a thorough sanitary condition and dispose of all your old birds and start with an entirely new strain.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer in your next issue the following:

1st. I have lost several hens (most of them were setting hens) with a disease unlike any I have been able to read about. The hens will get off the nest, sit or stand around in a stupid condition, heads turn a bloodless color, droppings are green and will live two or three days, and when die fall over and seemingly have fits and die in half minute. Have lost some fine ones this way.

2d. I am a beginner and would like to know what is the best kind of poultry to keep for an all around kind.

3d. Am on a farm of eighty-two acres, some timber and lots of pasture, river along south side, south slope. Can I keep 500 hens and will they need much feed in summer?

4th. How many hens for one rooster on above described place?

B. H.

Iowa Falls, Iowa.

Answer: 1st. From the description given we believe your hens are afflicted with bacterial enteritis. This disease is caused by several distinct varieties of bacteria and is frequently mistaken for cholera. The cause can usually be traced to improper feeding and impure water. After the disease has broken out in a flock, the first effort for its eradication should be a general cleaning up and dis-

infection. The disinfectant may be a 5 per cent solution of carbolic acid for saturating the floors and woodwork of the buildings, followed by a thorough application of whitewash, and give the following medicine: Subnitrate of bismuth, three grains; powdered cinnamon or cloves, one grain; powdered willow charcoal, three grains.

This may be given twice a day, mixed with the food or made into pills with flour and water.

2d. We never say which is the best breed for any purpose.

3d. You can easily keep 500 hens on eighty-two acres, and they will require very little feed during the summer months.

4th. One cock to twenty hens.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer through your paper how to tell the age of chickens. C. F.

Fort Wayne, Ind.

Answer: There is no way of telling the age of chickens.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—In the Question Department of the July issue of your valuable paper would you oblige me insofar as to tell me:

1st. How should Black Langshan chicks be marked and what should be the color of their legs?

2d. What causes setting hens to break and eat their eggs. They are each in a separate yard 3 feet long 18 inches wide and 1 foot high. They have fresh water, shelled corn, oyster shell and mica crystal before them all the time; also green grass. J. L. S.

Viroqua, Wis.

Answer: 1st. When hatched are generally black with white showing to a greater or less extent. Legs, bluish-black.

2d. This habit was probably contracted during the winter, and is generally caused by too close confinement and lack of exercise. A hen that is kept busy will not get into the habit of egg-eating.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following in your next issue: Would a tent made of ordinary table oilcloth, with a glass or burlap front, in any way make a satisfactory scratching shed for laying hens in winter; also for a brooder house in the cold months of early spring. S. G.

Glen Rock, Pa.

Answer: This might answer very well for a scratching shed, but do not believe it would be suitable for a brooder house. We would not advocate the use of oilcloth for this purpose, when tarred-felt paper can be procured so cheaply and is much better for the purpose.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Being a Buff Rock breeder, as well as a subscriber to your interesting paper, I would appreciate it very much if you would kindly answer the following questions in your "Questions and Answers" department of your next issue: What is the cause and prevention of ridges in eggs and what effect would they have on chicks hatched from them? I have heard they produced deformed chicks. I bought a setting recently from a breeder and most of the eggs were ridged, one ridged one hatched, another ridged one had a full

grown dead chick in that had pipped the shell, but did not get out; four others hatched, making five in all, while the remainder hadn't any germs in at all. At this time they are about four days old. One has always stood around very mopey looking and whenever it swallows anything it twists its neck as if it was choking; it keeps its eyes closed most of the time. Can you tell me the cause of it? If it was from my own eggs I should have it killed; hardly think it can live. Two of the chicks have feathers on their legs and very long whitish wing feathers are coming. Even the down on the wings is very light in color, and one little one has dark flesh-colored feet. Are all these things admissible in pure first-class Buff Rocks? Mine always hatch with yellow feet and without feathers on legs.

MRS. W. M. W.

Island Heights, N. J.

Answer: There has been a great many theories advanced as to the cause of deformed eggs, but we doubt if any one can tell the exact cause. It is no doubt due to some irregularities in the oviduct, but it is impossible for us to say just what brings this about. We do not believe that the shape of the shell has anything to do with crippled chicks, as we have hatched some very fine birds from eggs that were of very poor shape. On the other hand, we have hatched crippled chicks from eggs that were as near perfect in shape as they possibly could be. We don't believe the shape of the egg has anything to do with the producing of the condition of the little chick you mention. This chick was no doubt produced from a weak germ and will probably never amount to much, even if it does live. Buff Rock chicks should be buff in color when hatched, with clean yellow legs and feet and no white should appear in plumage at maturity.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—I have a good strain of S. C. White Leghorns and some of my young chicks have feathers on their legs and black feathers on their body. What is the cause of it? P. J.

Pleasantville, Iowa.

Answer: It is very evident that some foreign blood has been introduced into your flock in some way unknown to you. You should dispose of all birds showing these defects.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer in the next issue of your JOURNAL: Will chickens hatched this season be good for breeding next season with a two-year-old cock? What will be the results from a chick hatched from a pullet and a cockerel of the same blood? A. S.

Great Falls, Mont.

Answer: Mating a two-year-old cock with pullets is considered one of the best methods of breeding. No one can tell what the result would be of mating a cockerel and pullet of the same blood. This would depend somewhat on the individual specimens.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer following in next issue of JOURNAL:

1. I have a poultry house 20x60 feet divided into four pens. It is seven feet front and five feet back with hip roof, 9x17 feet faces south, 8 windows on south side, 10x12 glass 8 lights. It is double boarded with tarred felt between

and patent rubber roof. In the winter it gets very damp on ceiling. What is best plan for ventilation?

2. Do you consider fresh fish cut fine a good feed for poultry?

3. Are clam shells as good as oyster shells?

4. How old had chickens ought to be before taking away from hen?

Central Lake, Mich. J. P. L.

Answer: 1. You can probably get all the ventilation necessary in your house by leaving your windows open at all times except during real stormy weather. You can easily arrange your windows so that no direct draft will come on the fowls by tacking muslin in the windows during severe weather.

2. Fresh fish is a splendid feed unless fed to excess when it might have some effect on the flavor of the eggs. Feed this about the way you would feed fresh meat of any character.

3. Clam shells and oyster shells are about the same.

4. If the weather is warm, young chicks can be taken away from the hens when they are three or four weeks old, but generally thrive better if left with the hen until about two months of age.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer in your next issue of the AMERICAN POULTRY JOURNAL the following questions:

1. Will lawn clipping well seasoned and kept until winter make a good food for chickens?

2. Will it make them lay better?

3. Will eggs that have been dipped in hot water hatch?

4. What will be their appearance when tested after they have been in an incubator for a week?

5. My S. C. W. Leghorn cockerels are from Nebraska and my pullets from southeastern Iowa. If these pullets are mated to this cockerel will it make a good breed both for sale and egg production?

6. Will cockerels hatched from eggs from the above be all right to mate to pullets from the above?

7. Will this make a good breed for sale and egg production?

8. Would it be all right to put hens with their children? If not, would it be best to keep them separate?

A. R. M.

Hampton, Iowa.

Answer: 1. If the lawn clippings contain considerable clover it will make a good winter feed when properly steamed. 2. Yes. 3. No. 4. If fertile they will have a cloudy appearance and a dark spot will be observed, from which a number of blood lines extend. If unfertile the egg will appear perfectly clear. 5. We are unable to say. 6. This will depend upon the individuals. 8. We believe it poor policy to yard old and young stock together, for the amount of feed that is required to keep a pullet in laying condition would make a hen too fat for best results.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer the following questions under the headings of "Questions and Answers" department:

1st. What is the standard weight of Partridge Wyandottes for cock, cockerel, hen and pullet?

2nd. Can you tell me what is the matter with my ducks and cure for same. At night they get so they can

hardly walk and will not eat or drink, and gasp for breath. They do not live more than a day. They have free range and all they want to eat. E. F. P.

Walker, Mo.

Answer: 1st. Cock 8½ lbs.; cockerel, 7½ lbs.; hen, 6½ lbs.; pullet, 5½ lbs. 2d. From the meager details given we are inclined to believe that your ducks run themselves to death. Confine them in limited range and do not feed too much during hot weather. Keep fresh water where they will have access to it at all times, as a duck will not thrive unless they have water in which to wash their nostrils.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I wish you would please answer the following questions: Why are not eggs good for cold storage after the last of May. I notice in a paper they are not worth putting away after the first of June, and are they the same way for keeping in water glass.

Jackson Center, Pa. X. Y. Z.

Answer:—The reason that eggs are not put in cold storage to any extent after the first of June is, that generally the weather is so warm that the eggs become overheated in transit and therefore are not suitable for cold storage by the time they reach their destination. Where it is possible to put them in cold storage at once without having them exposed to the warm weather for a week or ten days, this can be done at any time. Water glass can be used at all times.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I have a chicken that her comb turned dark blue and she coughs as though she said *Whoa Ha*. What is the matter with her?

My young chicks are affected with a watery eye; only one eye is sore. What have they got? Can you give me a good remedy for both chicken and chicks?

A. L. L.

Kelly, Pa.

Answer: She is suffering from bronchitis brought on by a severe cold. A fowl that gets in this condition is not worth doctoring, and we would advise you to cut her head off and bury her. Your little chicks have, no doubt, contracted the same disease by your breeding from diseased stock. It is an impossibility to doctor little chicks if they are diseased when they are hatched; they will not amount to anything. You had better introduce new blood into your flock, and dispose of the diseased ones, otherwise your stock will never be any good.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: 1. What causes sore head? How prevented? Give remedy.

2. I have about 50 S. C. Brown Leghorn chicks; about half of them have well defined white bar across wings. Is this sign of impurity of breed? I bought the chicks from hatchery.

3. Every year about the first of April my hens begin to die with a disease that affects them as limber-neck, but I have cut open several and failed to find any maggots. They are nearly always taken suddenly, and are sometimes found sitting on the roost with their necks limber and heads hanging down. Their mouths and throats are filled with a slimy phlegm. Sometimes they will sit around on ground with their beaks resting on dirt for two or three days before dying. Last year I saved a few by giving a drop of car-

PAYNE'S CHICK FEED

Contains everything needed by chicks—grain and meat products. Send for sample. ALFALFA MEAL CO. 1632 Farnam St., Omaha, Neb.

PATENT YOUR IDEAS

\$100,000 offered for one invention: \$5,500 for another. Book "How to Obtain a Patent" and "What to Invent" sent free. Send rough sketch for free report as to patentability. We advertise your patent for sale at our expense. Chandless & Chaudhry, Patent Attorneys, 973 F Street, Washington, D. C.

SUPERIOR EGG PRESERVER!

Our Egg Preserver is guaranteed to keep eggs fresh and sweet indefinitely. Invaluable to the family and to the Egg Shipper. Buy eggs during the summer and hold them for winter prices. Price, \$1.00 prepaid, sufficient to preserve 1000 eggs. Complete instructions. No extra expense or attention required. Address Neuralg Chemical Co. Dept. D, Emmitsburg, Md.

MILES' BARRED ROCKS

are in front among the best on earth. Distinguished for unusually narrow, clear, ringy barring, birds of any exclusive breeding in any hands winning five-sixths of the prizes competed for. EGGS from Wilkesbarre, Pittsburg, Elmira and Auburn winners, 30, \$3; 56, \$5.

G. A. MILES, Laceyville, Pa.

H. O. SEARS

Is selling eggs from his B. P. Rocks, Pekin, Ronen and Indian Runner Ducks at \$2 per setting. Also Bronze Turkey eggs at \$2.00 per 9. Every breeder a winner. Order from this ad.
